Our Epidemiology and RWE Solutions

With a **large team of epidemiologists**, we have the capacity to conduct and support all types of epidemiological and real-world evidence (RWE) studies. Our activities range from **primary data collection**, non-interventional studies to different types of **database** studies. Our experienced team can further support in all stages of **systematic literature reviews** (SLRs), from protocol to publication.

1. Non-interventional studies on: burden of disease, safety, effectiveness, healthcare resource utilization, and others
2. Primary data collection
 - Feasibility
 - Protocol development
 - Investigators identification
 - Data capture, transfer and storage
 - Data and site monitoring
 - Analysis and reporting
3. Secondary use of electronic health record (EHR) databases, and access to a wide range of databases on demand
 - Feasibility and fit-for-purpose assessment
 - Protocol development
 - Analysis and reporting

Our Clinical Trial Services

Project management

Clinical operations

Data management

Medical monitoring

Home nurses

Biostatistics

Medical writing

Pharmacovigilance

Quality assurance

**Innovative,
cost-effective
and practical**

P95 provides **full contract research services** and expertise to ensure success in complex clinical studies.

We are committed to accelerating the development of medical innovations by providing expert staff, expert knowledge, enhanced site facilities and quality data management.
