

eThesis

A digital platform connecting academic research with real sustainability needs

ethesisplatform.com

The problem we address

Universities produce valuable knowledge, but collaboration with external stakeholders is often fragmented.

Common challenges include:

- Disconnected communication across students, supervisors, and institutions
- Limited visibility over research progress and outcomes
- Difficulty linking academic work with real business or societal needs
- Missed opportunities for internships, hiring, and applied research collaboration
- Limited mechanisms for spreading sustainability-related knowledge into practice

Important research exists, but it is often harder to organize, apply, and transfer into real-world impact.

This is especially relevant for sustainability, where companies and institutions need **practical access to knowledge, talent, and collaboration partners.**

What eThesis offers

eThesis **supports the full thesis and academic project lifecycle** in one platform.

We help institutions:

- Improve collaboration between students, supervisors, and administrators
- Centralize communication, files, and project progress
- Manage research topics, submissions, supervision, and evaluation
- Monitor activity through reporting and administrative dashboards
- Create a stronger connection between academic work and external opportunities

1. Research Bridge

Connects companies with academic research to support applied projects, problem solving, and sustainability or circular economy challenges.

2. Internship Bridge

Links students with organizations through structured internship opportunities that help bring sustainability knowledge into real working environments.

3. Hiring Bridge

Connects employers with candidates based on academic background and research interests, helping organizations identify talent for sustainability-oriented roles.

Contribution to sustainability

eThesis contributes in an indirect but meaningful way by improving how research is organized, shared, and applied.

We support sustainability by:

- Better visibility for research linked to sustainability and circular economy topics
- Easier collaboration between universities and organizations working on environmental and social challenges
- More efficient transfer of knowledge into applied research, internships, and hiring
- Stronger dissemination of sustainable practices through academic networks
- Improved access to talent for organizations building sustainable products, services, and operations

Who we are looking to connect with

We are looking to connect with:

- Universities and research institutions
- Faculties, departments, and research groups
- Companies and startups interested in research collaboration
- Organizations offering internships or looking for research-driven talent
- Innovation ecosystems supporting sustainability and circular economy cooperation

We are looking to connect with organizations that want to turn academic knowledge into practical collaboration, talent development, and sustainability impact.
