Development Methodology

Adaptive agile development (Scrum + Kanban)

We work with an adaptive agile methodology based on Scrum and Kanban: we tailor the product and the process to the needs.

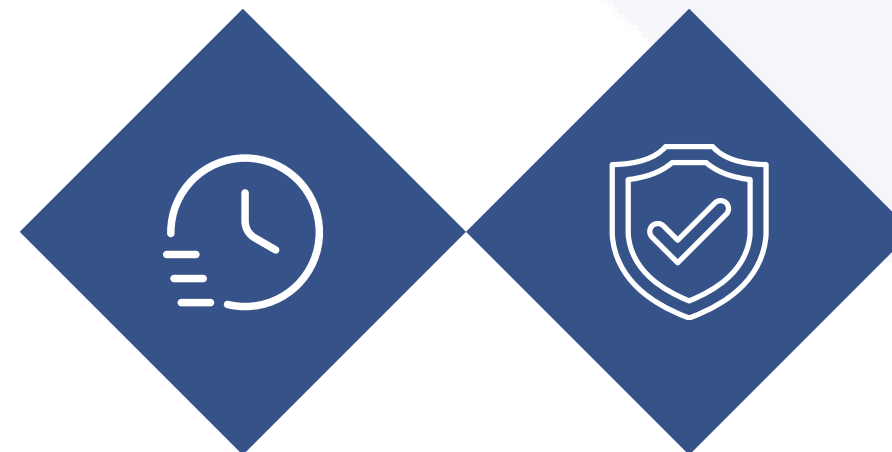

Flexibility for changing needs

If priorities or the operation of a feature change during the process, we can adapt quickly—without unnecessary re-planning.

Phases, milestones (2-week sprints)

Development happens in short, two-week sprints. At the end of each sprint, we present the completed features (the frequency of demos can be adjusted as needed).

Quality and security

We perform our work according to quality assurance and data protection principles supported by the **ISO 9001:2015** and **ISO/IEC 27001:2022** certifications.

Development Process

Signing the Contract

Define the schedule, responsibilities, and communication framework

Development Phase

We progress in two-week cycles:
Development → Demo → Feedback
→ Next sprint

Further Development

We are open for long-term partnerships (new features, refinements, reports, integrations, etc.)
