

VerifyStudio

Trust Intelligence Infrastructure

VerifyStudio is an enterprise risk assessment platform that analyzes identity documents, devices, networks, contact data, behavioral signals, and other trust vectors through a unified API. It produces explainable, evidence-backed risk assessments and recommendations while leaving final decisions to customers.

Problem

Organizations stitch together many vendors for KYC, fraud, device intelligence, document verification, and compliance, leading to high cost, latency, and fragmented decision-making.

Solution

A modular Trust Intelligence Gateway exposing independent APIs and a unified /decision endpoint. Customers choose only the intelligence modules they need and receive structured JSON with scores, evidence, confidence, explanations, and audit trails.

Core Capabilities

- Identity & document verification
- Device & network intelligence
- Behavioral analysis
- Fraud graph
- AML/KYC & KYB
- Policy engine
- Explainability & audit logging

Business Model

Usage-based API pricing, enterprise subscriptions, custom deployments, OEM partnerships, and compliance consulting.

Target Markets

Banks, fintech, insurance, HR platforms, marketplaces, telecoms, governments, healthcare, logistics, and any business making high-trust decisions.

Competitive Advantage

Explainable outputs, modular architecture, developer-first APIs, customizable policies, and unified trust orchestration.

Roadmap

1. Public API launch
2. Enterprise pilots
3. Marketplace integrations
4. Global trust network and partner ecosystem

Investment

Seeking strategic partners and early customers to validate the platform, accelerate development, and expand enterprise integrations.
