# ROADSIDE UNITS

## YUNEX SITRAFFIC ESCOS RSU 2X UND CMS 8.3

### 📍 RSU 2X

- 📍 WLAN (ITS-G5 DSRC)
- 📍 Privacy and security compliant with all standards
- 📍 Can be mounted on existing infrastructure
- 📍 Uses ASFINAGs fibre-network

### 📍 Central management system 8.3

- 📍 Kubernetes-based extension to classic TMC
- 📍 downstream (ASFINAG → vehicles)  
upstream (vehicles → ASFINAG)

# ROADSIDE UNIT ROLLOUT 2021

## 150 UNITS DEPLOYED, MORE THAN 300KM

- corridor: Salzburg – Linz – Wien
- area of Graz
- at the borders

# ROADSIDE UNIT ROLLOUT 2022

## 100 ADDITIONAL ROADSIDE UNITS

- Tirol A12/A13
- Kärnten/Salzburg A10
- Oberösterreich A8/A25
- Wien A1 (Kn. Steinhäusl bis Wien Auhof)
- Wien/NÖ/Bgld. A4

# COOPERATIVE SYSTEMS – C-ITS

**MOBILE TRAILERS**  
2021

**ROADSIDE UNITS**  
2022

**3 ASFINAG VEHICLES**  
2023

## **C-ITS DAY 1**

Planned and  
unplanned events

## **C-ITS DAY 1**

Variable message  
signs

## **C-ITS DAY 1**

Travel times and  
probe vehicle data

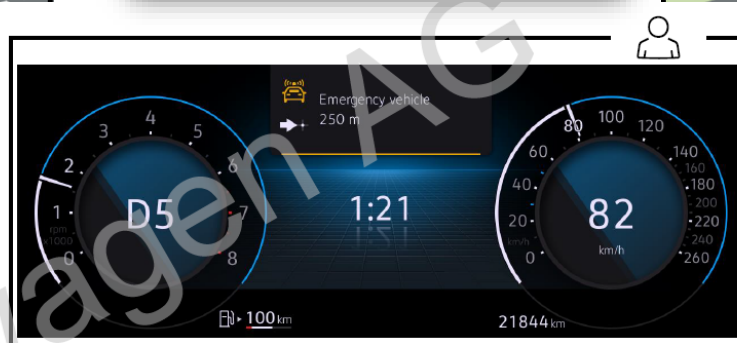

**A|S|F|i|N|A|G**

# ROAD OPERATOR VEHICLES

- Up to 100 vehicles of ASFINAG
- Automatic C-ITS-message based on usage of light-signal and vehicle-mounted VMS

## SAFETY ASPECTS

- 📍 It's equipped with several operating and safety devices according to regulation
- 📍 It has to be able to work “stand alone” as a fallback
- 📍 It works in scenarios that have to be defined beforehand
- 📍 It's now fully integrated with the new traffic management system

## SECURITY ASPECTS

- 📍 Tunnel control systems are so called „essential services“
  - defined by the NIS-law
- 📍 Hence the IT/OT Systems needs to be up-to-date at any time in terms of information security
- 📍 Robust underlying IT-infrastructure with improved patch and access control management has been introduced

## AN EXTRACT OF IMPORTANT EQUIPMENT

- 📍 Network (fibre and copper cabling, switches)
- 📍 SCADA-system (Tunnelserver [TuKo], local control units [SPS])
- 📍 Lighting (entrance and transit)
- 📍 Ventilation and air quality sensors (depends on tunnel length)
- 📍 Emergency call units/system & sound system
- 📍 Surveillance cameras
- 📍 Videodetection
- 📍 Audio-detection AKUT
- 📍 Tunnel radio (UKW, emergency communication)
- 📍 Escape doors and emergency exit signs
- 📍 Fire detection system and extinguishing water facilities
- 📍 Traffic signs
- 📍 Primary power supply (redundant) and UPS

# TUNNELS @ ASFINAG

## KAISERMÜHLENTUNNEL

### Operation and safety equipment

- 40 jet fans (each with 90 kW electrical power)
- 385 electrical cabinets
- 48 traffic counting loops
- 186 IP-cameras
- 61 traffic lights
- 240 traffic signs
- 671 entrance lights
- 1587 LED transit lights
- 90 escape doors
- ~45 km fiber optic cable
- ~14 km line detections
- 703 fire detectors
- ~800 km cables

# See you at ASFINAG!
