ARCORA

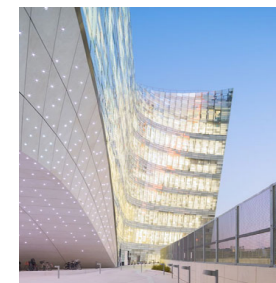

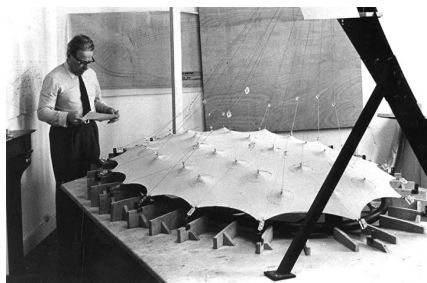

Description

Arcora is an engineering company specialised in steel structures, facades, envelopes and complex buildings. Our expertise is built on more than 48 years of experience and some 6200 projects around the world.

Our team is involved from the genesis of the project to the construction, supporting the client throughout the various stages of the project.

- Year of creation: 1976
- HQ in France : Rueil-Malmaison (92)
- Our expertise: façade, envelope and complexe structural design
- 2024 revenue: €6.82 million
- Employees: 53 people (engineers, architectural engineers, designers, and administration)

Axes of collaboration with ERC or RCRC

Axes of collaboration :

- ***New constructions***

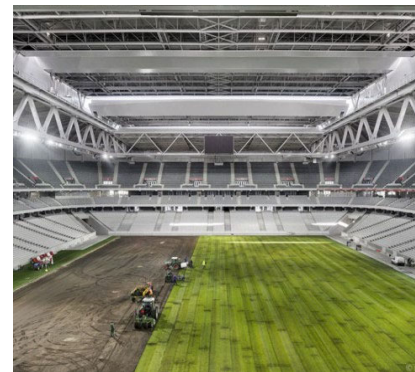

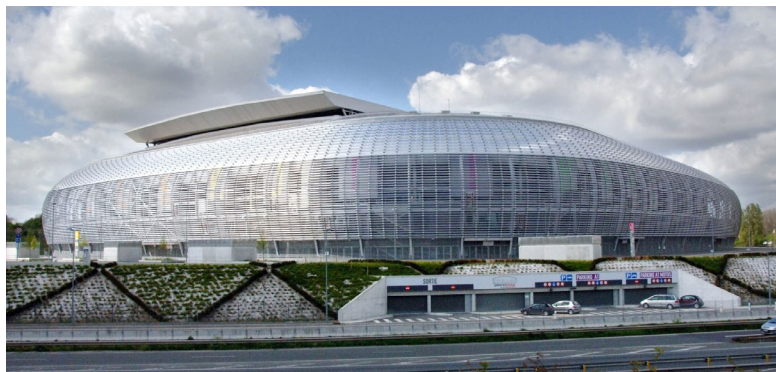

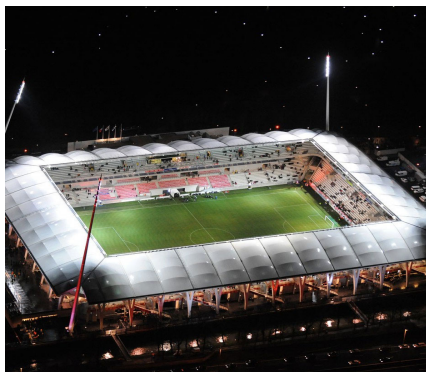

As Arcora is an engineering company, we seek collaborations with contractors, general contractors, and architects to meet the needs of building construction: pavilions, metro stations, arenas, World Cup stadiums, high-rise buildings, luxury hotels, etc. Our expertise in streamlining structures, building envelopes, and facades saves time at various stages of a construction project, from the design and tender phases to the subsequent construction phase.

- ***Renovation of existing buildings***

Arcora also wants to position itself in the renovation market. As the building stock is, to a certain extent, aging, we conduct studies on the condition and performance of existing building envelopes in order to provide the best possible advice to project owners, asset managers, etc. We guide them on the best course of action for their buildings in terms of performance, comfort, and cost savings.

Our skills

- Stadiums

From the left to the right / haut and downwards

- Stade de Reims - Atelier Michel Remon Architecte
- Stade Pierre-Mauroy à Lille - Valode et Pistre, Atelier Ferret
- Renovation Stade de France - St Denis – Wilomotte & associés
