

Pillar 2

Session 2.3 Role of design inside industry processes

Sören Müller

Founders and CEO

INGWERK GmbH

Soeren Mueller is one of the founders and CEOs of the INGWERK GmbH based in Berlin, Germany. He is also the director of the Extrusion Research and Development Center of the TU Berlin. In his positions he has been involved in metal forming and development of processes and materials for more than fifteen

years. With his two positions in academic as well as in the industrial environment Soeren's work has a strong focus on bringing new ideas and developments from science into application. Thus, he was involved in numerous national and international collaboration projects between universities, research facilities and industry. His current projects are often dealing with challenges interfacing several disciplines such as mechanical engineering, process technology, material science, mechatronics, computer science and control engineering. By involving these several disciplines the projects are targeting forward-looking areas of the modern world such as urban mobility, medical technology, energy generation and transportation, simulation of processes and materials as well as digital production.
