www.scame.com

Starting from an isolated nail, a product as simple as the winning idea that generated it, an over fifty-year history of continuous research and development, has generated a proposal made up of more than 20,000 products designed to cover every need and installation environment. This publication intends to propose a summary of the SCAME offer for e-mobility, a sector in which it has been a protagonist since 1999, so to make the choices in terms of charging stations and cables easier according to your specific needs. The overall SCAME offer is available on the web at www.scame.com and e-mobility.scame.com for further information focused on charging systems for electric vehicles.

The Company

*"In over **fifty years** we have built an **industrial reality** that has always maintained the spirit of its **origins**."*

Stefano Scainelli CEO

SCAME PARRE S.p.A., head of the SCAME group, is a manufacturer of components and systems for electrical installations in the civil, services and industrial sector, born and raised in the mountains of the upper Val Seriana, in the Province of Bergamo, Northern Italy. Since 1963, the year of its foundation, in more than half a century of activity, SCAME has never betrayed the spirit of the origins made of attention to the environment and the person, as well as continuous research to provide an innovation that is never an end in itself, but which translates into total quality and real benefits for the user.

Already a pioneer in the field of the solutions dedicated to electric vehicles charging, for which it has created a specific business

division and is today considered an absolute benchmark, the continuous search for new markets has led SCAME to develop also an articulated range of ATEX IECEx products for installation in hazardous areas, without neglecting its traditional offer based on products for domestic and industrial applications, even heavy ones. A catalogue able to meet any installation requirement, a product quality guaranteed by compliance with national and international Standards, a rapid customer service able to support every choice and an high level of service, have enabled SCAME to affirm its presence not only nationally, but also internationally through a network of 17 branches and a consolidated network of distributors in over 80 countries on 5 continents.

THE CONCEPT OF QUALITY IS AN INTEGRAL PART
OF OUR CULTURE IN ALL ASPECTS AND
EVERY ACTIVITY OF OUR WORK.

MODE

Scame charging stations are available in three different operating modes: FREE, PERSONAL and WEB/NET.

The stations can be connected to each other and organized in a Master/Satellite architecture that can be managed either via Scame's proprietary Management System or connected to an external E-mobility Service Provider.

FREE

FREE mode charging stations are the ideal choice for installation in environments that don't require controlled access insofar as use is normally limited to just a few people, usually the owners of the vehicle, or places where access is already regulated by other systems. Charging session is freely accessed.

FREE mode charging stations can act as a Satellite in a Master/Satellite architecture.

Operating mode: Free (default)

Satellite (when connected in a Master-Satellite architecture)

Embedded features: Management System (*)

Load Balancing (*) OCPP 1.6JSON(*)

()only available when acting as Satellite in a Master-Satellite configuration in which the Master has activated these features*

PERSONAL

PERSONAL mode charging stations are suitable for installation in all places requiring controlled access insofar as use is not normally limited exclusively to the owners of the vehicle, but rather extends to a greater number of users, or in cases where access to the charging stations needs to be monitored and regulated.

PERSONAL mode charging stations can act as a Satellite in a Master/Satellite architecture.

Operating mode: Free Personal (default)

Satellite (when connected in a Master-Satellite architecture)

Embedded features: Management System(*)

Load Balancing (*) OCPP 1.6JSON(*)

()only available when acting as Satellite in a Master-Satellite configuration in which the Master has activated these features*

WEB/NET

WEB/NET mode charging stations are the ultimate choice in all those cases where the system must be monitored and managed remotely.

All WEB/NET stations have embedded Scame's proprietary Management System and can act as a Master in a Master/Satellite architecture.

A Master station can manage up to 16 charging points.

Operating mode: Web/Net (default)

Master (when connected in a Master-Satellite architecture)

Embedded features: Management System

OCPP 1.6JSON

Optional features: Load Balancing

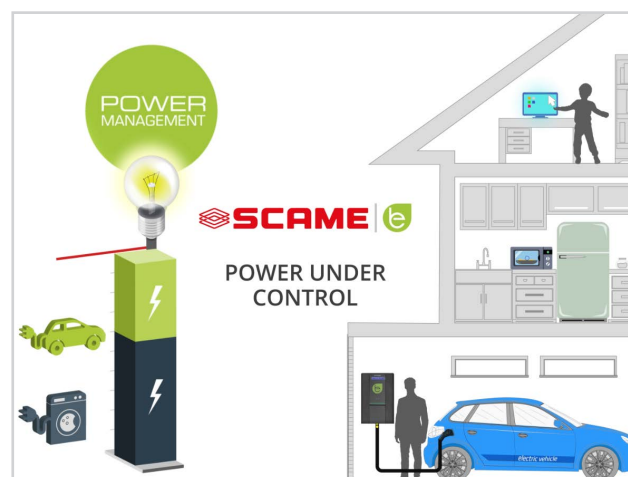

to be activated during ordering phase via P/N 209.LB01

FEATURES

Scame's range of charging stations can be scaled up with additional features and functionalities intended to maximizing the system's flexibility.

POWER MANAGEMENT

The POWER MANAGEMENT Feature is a must have option in residential installations in which there is limited available power. In such cases, starting a charging session of an electric vehicle while other electrical appliances are running (such as a washing machine) may result in a power outage due to exceeding the contractual power. The Power Management smart feature allows your wall-box to dynamically modulate the current destined to your electric vehicle based on the instantaneous consumption of all domestic appliances, avoiding power outage. The Power Management smart feature will also keep into consideration the current generated by solar panels.

FEATURES

LOAD BALANCING

Scame's Load Balancing system proves essential in cases where there are multiple charging points, but not enough power to feed all of them simultaneously at their maximum rated power.

By activating this feature, an option will be available in Scame's Management system and it will be possible to allocate a maximum total current threshold for a Master-Satellite system architecture.

In case the charging stations exceed this limit, the Master station will democratically balance the power output of the entire system architecture allowing all vehicles to keep recharging but at a lower current value.

Scame Load Balancing feature can be active even if the charging stations are managed by an external E-mobility Service Provider.

FEATURES

MANAGEMENT SYSTEM

Scame Charging stations can be monitored and managed remotely either via the Scame Management System or they can be connected to an external E-mobility Service Provider.

Scame charging stations can be connected to each other in a Master-Satellite system architecture in which a Master controls up to 16 charging points.

SCAME LOCAL MANAGEMENT SYSTEM

Scame charging stations can be monitored and managed remotely via the Scame proprietary Management System(MS). The proprietary software is embedded in all Web-Net mode charging stations, is free to use and allows to manage up to 16 charging points connected under the same Master/Satellite architecture.

Scame MS must be configured in a local area network, does not require any additional software installation and can be managed directly by the administrator who can access the Management System with credentials via the LAN IP address.

Scame MS provides full control and allows a comprehensive set of actions and information on the system such as charging point status, live charging session data, management of authorized users list, data consumption monitoring, search/filter/download all transactions, Start/Stop/Resume transactions, limit available power per socket outlet, reboot the system, update firmware and much more.

Information relayed to the Management System depends on the charging stations' equipment.

To make the most of Scame MS, we suggest that all Master/Satellite stations be equipped with a Digital Energy Meter and RFID card reader.

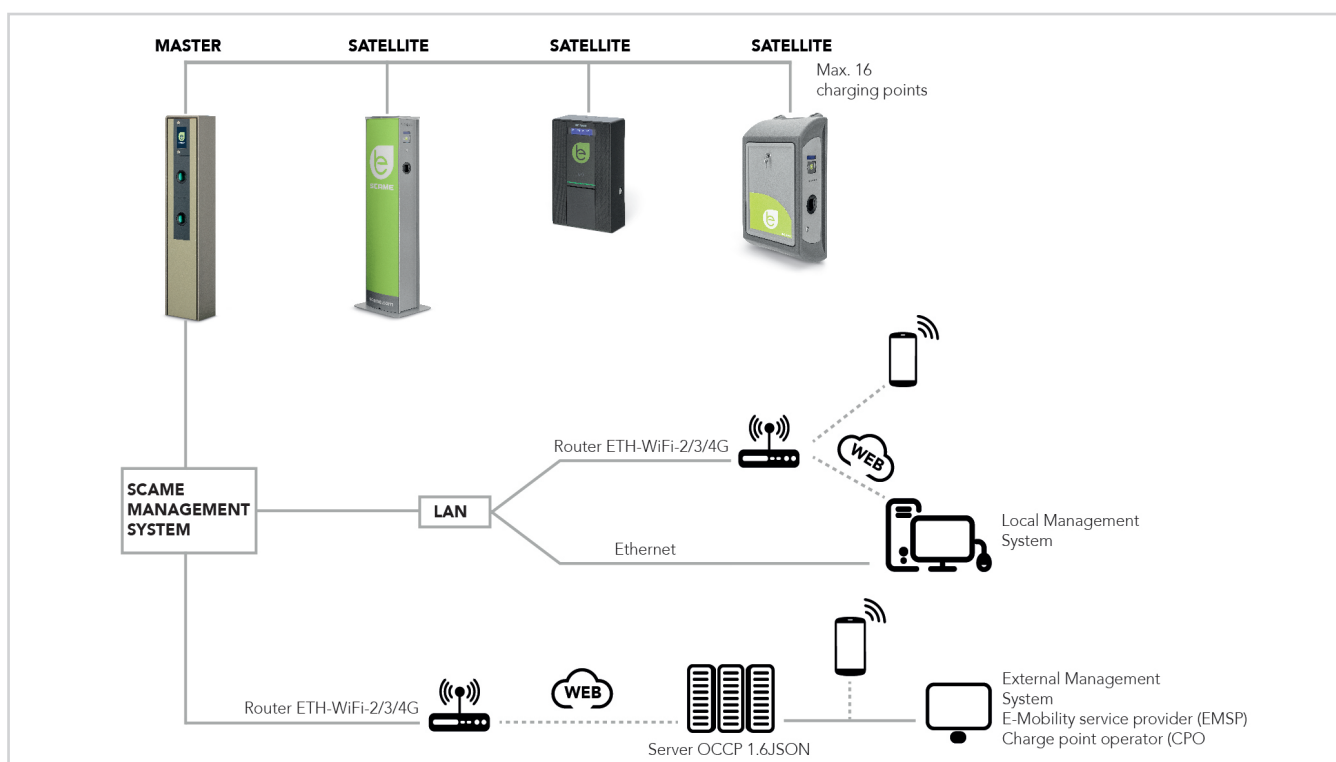

OCPP EXTERNAL MANAGEMENT SYSTEM

Scame management system allows to connect the Master station to an external E-mobility Service Provider (EMSP) via OCPP 1.6Json standard communication protocol.

In this case the stations will be managed by the external EMSP and may allow further services such as billing operations and station booking.

Connecting the stations to an external management system may require you to sign a contract with the EMSP and yearly subscription fees may apply.

Scame guarantees the compatibility between it's charging stations and external E-mobility Service Providers that have undergone an OCPP 1.6Json compatibility test. The list of approved EMSP is available upon request: Contact your Scame representative for more information.

CHARGING STATIONS

BE-W

REFERENCE STANDARDS

EN 61851-1 (3rd ed.)

EN 61439-7

VERSIONS

BE-W is a range of AC wall mounting charging stations with power from 3,7 to 22 kW.

They can be equipped with a Type 3A or Type 2 socket outlet with safety "Shutters" for increased protection. Tethered charging cable versions are also available.

They are ideal both in domestic applications, especially when coupled with the Power Management feature, and in public areas as they can be configured in different operating modes. Take full control of the charging stations via the Scaem proprietary Management System, or connect them to an external E-mobility service provider via OCPP communication protocol.

Made of halogen-free technopolymer, they are characterized by the Dual Feel Sensitive finish. The clean and essential lines are designed by acclaimed Italian Trussardi + Belloni Design.

TECHNICAL CHARACTERISTICS

Rated current:	16A-32A
Rated voltage:	230Vac-400Vac
Frequency:	50/60Hz
Insulation voltage:	250V-500V
Protection degree:	IP54
Active parts protection:	IPXXD
Installation temperature:	-30°C +50°C
Material:	Thermoplastic
Glow Wire test:	650°C
IK degree at 20°C:	IK08
Colour:	Anthracite
Installation:	Wall-mounted
Saline solution:	Resistant
UV rays:	Resistant

MAIN FUNCTIONALITIES AND ELEMENTS

- LED Status Indicator
- LCD Display
- Adjustable Current: from 6 to 32A (32A - default)
- DC Leakage detection - allows to fit an upstream RCD Type A protection (verify local regulations)
- Save unlock - in case of power outage unlatches the locking mechanism allowing to unplug the charging cable from the socket outlet (N/A on tethered versions)

DISTINCTIVE ELEMENTS

TYPE 2 SOCKET WITH SHUTTERS (T2S)

Scaem patented type 2 socket outlet integrates a mechanical protection system (known as shutters) that elevate the safety standard to IPXXD. T2S, simply safer.

LED STATUS INDICATOR

An LED light will indicate the wallbox status making the overall charging experience very intuitive.

FREE MODE - WALL BOX WITH ONE TYPE 2 SOCKET OUTLET WITH SHUTTERS (T2S)

	Cable support with connector wholster (already provided in BE-W tethered versions)	208.AP41

CUSTOMIZATIONS

The Wall Box BE-W can be graphically customized by modifying the part between the display and the signaling LED. To have the customization it is necessary to add the code **209.CU01-W** to the order and at the same time attach a file in vector format containing the data necessary for the graphic creation.

N.B. Scame reserves the right not to accept graphic proposals that are deemed inappropriate.

CHARGING STATIONS

WD

REFERENCE STANDARDS

EN 61851-1 (3rd ed.)

EN 61439-7

VERSIONS

With socket outlets

With tethered charging cable

WD is a range of AC wall mounting charging stations made of high strength thermoplastic and painted sheet steel with powers ranging from 3,7 to 44 kW.

It is available in a tethered charging cable version or it can be equipped with up to two socket outlets, either Type 3A and/or Type 2.

The Scame patented IPXXD Type 2 socket outlets with shutters fitted in the WD range are coupled with the Scame One Hand Vandal Proof System flange which allows for safer and easier charging operations as well as improving accessibility to a wider range of users.

WD series can be set up in a Master/Satellite network and can be managed with Scame's proprietary Management System. Alternatively it may be connected to an external E-mobility Service Provider via OCPP making it the ideal choice for public applications.

AVAILABLE COLOURS

STANDARD COLOUR

SPECIAL COLOUR

The charging stations are supplied standard in the colour BE-BRONZE.

Minimum batches of at least 10 pieces can be customised in the other listed colours.

PERSONALISED LOGO

Charging stations BE-A, BE-B and BE-B tethered can be personalised with one's own company logo in the indicated area. To request personalisation, the code **209.CU01-A** or **209.CU01-B** must be inserted in the order and a vector file of the company logo must be attached.

N.B. Scame reserves the right not to accept graphic proposals incompatible with the design of its stations.

APPLICATION EXAMPLES

CHARGING STATIONS

CA

REFERENCE STANDARDS

EN 61851-1 (3rd ed.)

EN 61439-7

VERSIONS

CA is a range of AC charging stations made of painted steel with powers ranging from 3,7 to 44 kW. It may be equipped with up to four socket outlets.

Scaem's patented Type 2 socket outlet with shutters are coupled with the unique One Hand Vandal Proof flange.

The CA range allows for the greatest level of customization among the Scaem range. The graphics of the frontal panels can be entirely customized with a design or logo of your choice, making it the ideal solution for offering a recharging opportunity as well as delivering an advertising message.

Also available in a tethered charging cable version, the CA range can be encompassed in a Master/Satellite system entirely manageable by Scaem's proprietary Management System or by an external E-mobility Service Provider.

TECHNICAL CHARACTERISTICS

Rated current:	16A-32A-50A-63A
Rated voltage:	230Vac-400Vac
Frequency:	50/60Hz
Insulation voltage:	250V-500V
Protection degree:	IP54
Installation temperature:	-30°C +50°C
Material:	Steel sheet
Glow Wire test:	-
IK degree at 20°C:	IK10
Colour:	Grey
Installation:	Free-standing
Saline solution:	Resistant
UV rays:	Resistant

MAIN FUNCTIONALITIES AND ELEMENTS

- LED Status Indicator
- LCD Display
- Adjustable Current: from 6A to 32A (32A - default) adjustable up to 63A for stations with 63A rated current
- DC Leakage detection - allows to fit upstream RCD Type A protections (verify local regulations)
- Save unlock - in case of power outage will keep the system in standby for 1 minute. Will resume charging in case power comes back before system shutdown

DISTINCTIVE ELEMENTS

TYPE 2 SOCKET WITH SHUTTERS (T2S)

Scaem patented type 2 socket outlet integrates a mechanical protection system (known as shutters) that elevate the safety standard to IPXXD. T2S, simply safer.

ONE HAND VANDAL PROOF PROTECTION

Scaem One Hand Vandal Proof flange reduce the risk of vandals tampering with the covers and improves charging accessibility.

CUSTOMISATIONS

The CA pillar can be customised with personal graphics, modifying the inclusive section between the display and led indicator. For customisation, it is necessary to add the code **209.CU01-CA** to the order and attach a vector file containing the necessary data for the development of the graphics.

N.B. Scame reserves the right not to accept proposed graphics that are deemed inappropriate.

CHARGING STATIONS

CB

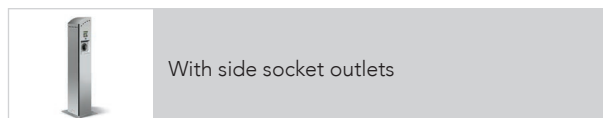

REFERENCE STANDARDS

EN 61851-1 (3rd ed.)

EN 61439-7

VERSIONS

CB is a range of AC charging pillars made of stainless steel with powers from 3,7 to 44 kW. It may be equipped with up to two socket outlets.

Harsh environment conditions are sure to reduce the lifespan of any equipment. This is why the CB range, made of high quality stainless steel, is the unparalleled choice for an investment sure to withstand the test of time.

The sturdiness of stainless steel coupled with the possibility to manage the stations with Scame's proprietary Management System, or connection to an external E-mobility Service Provider for billing operations, makes this the preferred range for marinas, harbours or seafront parkings wishing to provide a charging opportunity to anyone visiting or attending their premises.

TECHNICAL CHARACTERISTICS

Rated current:	32A–63 A

VERSIONS

Distribution assembly

UB is a range of charging stations for electric bicycles.

Available both in wall mounting and floor standing solution, the E-bike range is the ideal choice for public and private entities wishing to have a location dedicated to the recharge of electric bicycles.

They are available in the simplest plug and play setup, or access may be reserved only to authorized users who need an identification method to activate the charging session.

Authorization of users, statistics and transactions may be managed via Scame proprietary Management System, alternatively, billing operations are also possible when connected to external E-mobility Service Providers via OCPP communication protocol.

E-MOBILITY

CHARGING
CABLES

CHARGING CABLES

A charging cable is intended to connect an electric vehicle to a mode 3 charging station.

It consists of a plug, to be mated in the charging station, and a connector, to be plugged into the e-vehicle's inlet.

A mode 3 charging cable is equipped with a CP contact intended to allow PWM communication between the vehicle and the charging station. Additionally, the cables are wired with a PP contact that allows the vehicle not to absorb more power than the charging cable can physically deliver. All SCAE's charging cables are certified according to the relevant standards, and as further proof of the excellent quality and safety built, the SCAE charging cables have obtained the prestigious EV-READY quality mark.

CHARGING CABLES

Scame's charging cable are also available in the spiral cable version. The spiral version differs from the linear/flat version for the compactness of the cable.

A coiled cable takes up less space and can be easily and neatly stored away in the car's boot.

During connection phase the coils gently ease out keeping your cable suspended mid-air and away from dirt, mud and snow.
