SMART MUSIC TUYA DIGITAL RGB + IC LED STRIP 5M ROLL IP20, SET

GENERAL INFORMATION »

The main benefit comparing to analog LED strips is that you can control every section of LEDs, separately. Traditionally, it is achieved thanks to additional chips (IC) assembled directly inside the LED diode or on the digital strip board.

Each group of LEDs has an integrated circuit chip, and this integrated circuit chip controls the change of color and brightness of this group of LEDs.

When switching the power, the current passed through the LEDs, causing LEDs to light up at their default settings. To create an effect, you need to enter a command on the controller.

CONTROL: From Anywhere via Smart Device or local via remote
