## TED Coaxial Cable RG6 75Ω CCS

RG6 CCS type of 75Ω coaxial cable is a cable television (CATV) distribution coax, used to route cable television signals to and within homes. CATV distribution coax has a Copper-Clad Steel (CCS) center conductor and a combination aluminum foil/aluminum braid shield, typically with low coverage (about 60%). For a maximum length of 20 meters for a cable segment, it can provides the performance offered by an RG6 standard cable.

Cables attenuate a signal in direct proportion to length. Attenuation increases with frequency due to skin effect.

**PE 4.5mm** 

Category 5e (cat.5e) cable, also known as Enhanced Category 5, is designed to support full-duplex Fast Ethernet operation and Gigabit Ethernet.

The performance requirements have been raised slightly in the new standard.

Cat.5e has stricter specifications for Power Sum Equal-Level Far-End Crosstalk (PS-ELFEXT), Near-End Crosstalk (NEXT),

Attenuation, and Return Loss (RL) than those for cat.5.

Like cat.5, cat.5e is a 100 MHz standard, but it has the capacity to handle bandwidth superior to that of cat.5.

Cat.5 cable is typically used for Ethernet networks running at 100 Mbps.
