Energieeffizienz-Label

Energy efficiency labels

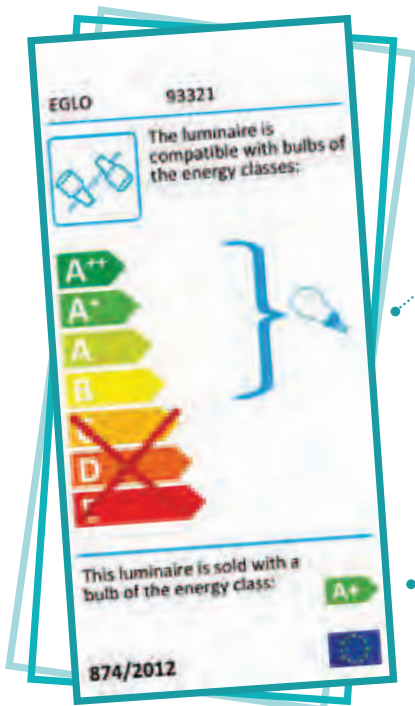

Label de l'efficacité énergétique

LED luminaires are increasingly popular and the demand for energy-efficient solutions is gaining strength. This has resulted in the adoption of several EU regulations prescribing the energy efficiency labelling of light sources and luminaires. We have prepared a brief overview of the new energy labels.

LED Leuchtmittel sind am Vormarsch, der Ruf nach energieeffizienten Lösungen wird immer größer. In den letzten Jahren wurden daher mehrere EU-Verordnungen verabschiedet, die die Kennzeichnung der Energieeffizienz bei Leuchtmitteln und Leuchten vorschreibt. Hier finden Sie eine kurze Übersicht der neuen Energieeffizienzkennezeichnung.

Les éclairages LED gagnent du terrain, la demande de solutions efficaces en énergie ne cesse de croître. C'est la raison pour laquelle plusieurs directives européennes prescrivant le marquage de l'efficacité énergétique des moyens d'éclairage et des lampes ont été promulguées au cours de ces dernières années. Vous trouverez ici un bref aperçu d'ensemble des nouveaux marquages de l'efficacité énergétique.

The information in brackets at the centre of the label indicates which bulbs may be used for the luminaire. In this case, the product is only compatible with bulbs with an energy efficiency rating of better than C.

Die Klammer in der Mitte des Labels gibt an, mit welchen Leuchtmitteln die Leuchte kompatibel ist. In diesem Fall dürfen nur Leuchtmittel verwendet werden, deren Energieklasse effizienter als C ist.

La parenthèse au milieu du label indique les moyens d'éclairage avec lesquels la lampe est compatible. Il est seulement permis dans ce cas d'utiliser des moyens d'éclairage dont la classe d'énergie présente une efficacité supérieure à C.

If bulbs are included with the luminaire, their energy classes are indicated at the bottom of the label.

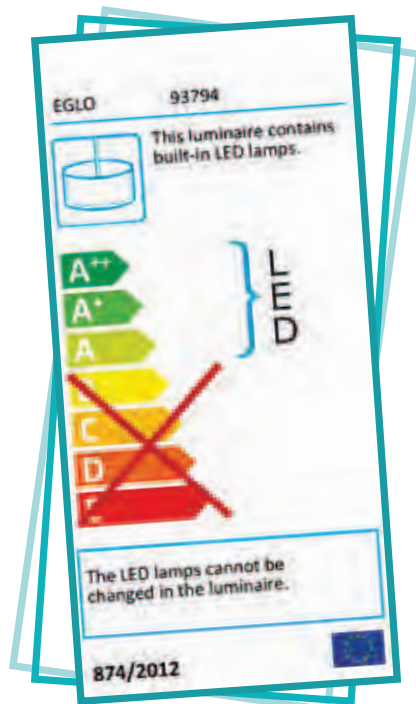

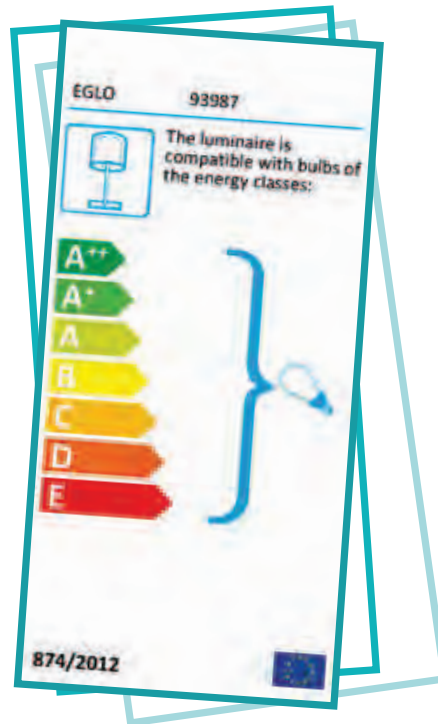

Falls Leuchtmittel inkludiert sind, wird deren Energieklasse im unteren Teil des Labels angegeben.

Si des moyens d'éclairage sont inclus, leur classe énergétique est indiquée dans la partie inférieure du label.

This label indicates that no bulbs are included with the luminaire. Consumers are free to choose their preferred bulb within the indicated energy classes.

Dieses Label wird verwendet, wenn die Leuchte ohne Leuchtmittel ausgeliefert wird. Der Kunde kann selber entscheiden, welches Leuchtmittel der angegebenen Klassen verwendet wird.

Ce label est utilisé lorsque la lampe est livrée sans ampoules. Le client peut décider lui-même quel ampoule des classes indiquées est utilisé.

This label indicates that the luminaire is sold with built-in LED lamps that cannot be replaced by the consumer himself.

Dieses Label wird verwendet, wenn Leuchten mit LED-Modulen verkauft werden, die vom Endkunden nicht selbstständig ausgetauscht werden können.

Ce label est utilisé lorsque des lampes sont vendues avec des modules LED ne pouvant pas être changés par les clients finaux eux-mêmes.

INCL. SENSOR

Your hands are full and you can't reach the light switch? Then choose our LED wall and ceiling lamps with an integrated high frequency sensor. These combine the advantages of LED technology with the advantages of a sensor:

The special high frequency sensor is mounted invisibly behind the glass. Whether you mount it on the wall or on the ceiling, the sensor works with both methods and is particularly well suited for rooms in which you only stay in for a short time.

Even higher cost savings and more comfort thanks to the automatic on/off switching of the lamp.

360° detection angle and high detection range of about 25m².

The sensor can be individually adjusted to your needs: light time from 3 to 25 minutes and ambient brightness from 2 to 2000 lux.

Sie haben beide Hände voll und können den Lichtschalter nicht erreichen? Dann steigen Sie einfach auf unsere LED Wand- und Deckenleuchten mit integriertem Hochfrequenzsensor um. Diese vereinen die Vorteile der LED Technologie mit den Vorteilen eines Sensors:

Der spezielle Hochfrequenzsensor ist unsichtbar hinter dem Glas versteckt. Egal ob an der Wand oder an der Decke montiert, der Sensor funktioniert bei beiden Montagearten und eignet sich besonders für Räume mit kurzer Verweildauer.

Eine noch höhere Kostenersparnis und mehr Komfort durch automatisches Ein- und Ausschalten des Lichtes.

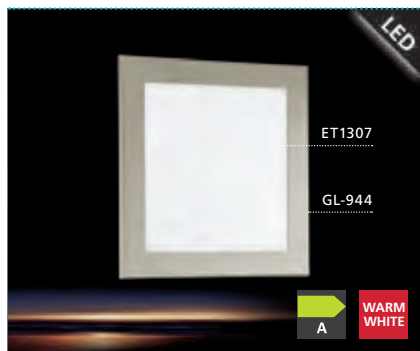

360° Erfassungswinkel und hohe Reichweite von bis zu 25m².

Der Sensor kann auf die individuellen Bedürfnisse angepasst werden: die Leuchtdauer reicht von 3 bis zu 25 Minuten und die Helligkeitsempfindlichkeit von 2 bis 2000 lux.

Vous avez les mains prises et ne pouvez pas allumer la lumière? Avec nos appliques et plafonniers LED avec capteur d'haute fréquence intégré vous pouvez résoudre ce problème! Ces luminaires combinent les avantages de la technologie LED avec les avantages d'un capteur: Le capteur d'haute fréquence est invisible. N'importe si vous installez le luminaire sur le plafond ou le mur, le capteur fonctionne bien et se prête spécialement aux espaces avec durée de présence courte. Économie réalisée sur les coûts encore plus haute et plus de confort grâce à l'allumage et l'arrêt automatique de la lumière. Angle de perception 360° et haute portée jusqu'à 25m². Le capteur peut être adapté aux besoins individuels: durée de l'allumage de 3 à 25 minutes et sensibilité de luminosité de 2 à 2000 lux.

92305 - heat shrink tube

The heat shrink tube provides better protection against moisture and dust. With the help of an industrial hot air blower you can shrink the tube. The tube can be cut in half and used for two connections.

Mit dem praktischen Schrumpfschlauch schützen Sie die Verbindungsstellen zwischen den Stripes noch besser vor Staub und Feuchtigkeit. Mit Hilfe eines Industrie-Heißluftföns wird dieser geschrumpft. Der Schlauch kann halbiert und für zwei Verbindungen verwendet werden.

Une gaine contractile protège encore mieux contre l'humidité et la poussière. Se peut fondre avec un sècheur industriel. La gaine peut être coupée en deux et utilisée pour deux connexions.

COCOON® THE ORIGINAL

About 5,000 years ago, a small caterpillar started to write COCOON® history: the silkworm, the larva of the silkworm moth, builds a cocoon for pupation from a filament that is up to 900 metres long. It is performing the heaviest work in the process as it needs to wrap itself up with up to 300,000 loops.

We have taken this method as a model for the production of our COCOON® luminaires. COCOON® a unique special formula licensed by EGLO from which an extremely resilient and elastic material is produced. Models of any kind can be covered with a diaphragm. The variety of shapes allows almost infinite possibilities, and only the sky is the limit in terms of designer creativity.

Eine kleine Raupe hat bereits vor ca. 5.000 Jahren COCOON®-Geschichte geschrieben: die Seidenraupe, die Larve des Seidenspinners, baut sich zur Verpuppung einen Kokon aus einem einzigen bis zu 900 Meter langen Faden. Sie leistet dabei Schwerstarbeit, muss sie doch bis zu 300.000 Schlaufen um sich herum legen.

Zur Produktion unserer COCOON® Leuchten haben wir uns dieses Verfahren zum Vorbild genommen. Als COCOON® wird eine von EGLO lizenzierte und einzigartige Spezial-Rezeptur bezeichnet, mit der ein extrem belastbares und elastisches Material hergestellt wird. Modelle jeglicher Art können mit einer Membran bespannt werden. Die Formenvielfalt ist somit schier unendlich und der Kreativität der Designer sind keine Grenzen gesetzt.

Un petit ver écrivait l'histoire COCOON® il y a env. 5000 ans : le ver à soie, la larve du tisseur de soie se construit un cocon à partir d'un seul fil pouvant atteindre 900 mètres pour se transformer en chrysalide. C'est un travail laborieux car elle doit enrouler le fil jusqu'à 300 000 fois autour d'elle.

Pour produire nos luminaires COCOON®, nous nous sommes basés sur cette façon de faire. COCOON® désigne un procédé spécial et unique breveté par EGLO qui permet de fabriquer un matériau extrêmement résistant et élastique. Tous les types de modèles peuvent être recouverts d'une membrane. La diversité des formes est donc infinie et les designers peuvent laisser libre cours à leur créativité.

 This luminaire can be switched on/off and dimmed by touching the specially designed "Touch Me" part of the fixture.

Diese Leuchte kann ein- bzw. ausgeschaltet und gedimmt werden, indem man sie an den dafür vorgesehenen „Touch Me“ Bereichen berührt.

Ce luminaire peut être éteint, allumé et gradué simplement en touchant la partie spécialement conçue pour «Touch Me» du luminaire.

 The different lighting atmospheres can be adjusted with a conventional light switch. By pressing the switch in quick succession the luminaire changes between the different atmospheres (see below), by pressing the switch slowly the luminaire turns on or off. The last setting will then be saved.

Die unterschiedlichen Lichtstimmungen der Leuchte können mit einem herkömmlichen Lichtschalter bedient werden. Durch schnelles Betätigen des Schalters wechselt die Leuchte zwischen den Einstellungen (siehe unten), langsames Drücken schaltet die Leuchte ein bzw. aus. Dabei wird die letzte Einstellung gespeichert.

Les ambiances lumineuses de la lampe peuvent être réglées avec un interrupteur conventionnel. Si l'interrupteur est actionné rapidement, la lampe change entre les ambiances différentes (voir ci-dessous); s'il est actionné lentement, la lampe est éteinte ou allumée. La dernière préférence sera mémorisée.

PROTECTION CLASS SCHUTZKLASSE CLASSE DE PROTECTION

The protection class indicates to what extent the lamp is protected against electric shock. All lamps in this catalogue are at least protected with the protection class 1 - a higher class is specified in the information box of the respective lamp.

Die Schutzklasse gibt an, inwiefern ein Produkt gegen einen elektrischen Schlag gesichert ist. Alle Leuchten in diesem Katalog sind mit mindestens Schutzklasse 1 gesichert, bei höheren Klassen wird das Symbol im Infokasten der Leuchte angegeben.

La classe de protection indique, dans quelle mesure la lampe est protégée contre les chocs électriques. Tous les lampes dans ce catalogue sont protégés au moins avec la classe 1 - une classe plus élevée est indiquée dans l'information de la lampe.

-  **protection class 1: protective earthing**
Schutzklasse 1: Schutzerdung

-  **protection class 2: protective insulation**
Schutzklasse 2: Schutzisolierung
classe de protection 2: double isolation ou renforcée
-  **protection class 3: protective low voltage**
Schutzklasse 3: Schutzkleinspannung
classe de protection 3: très basse tension de sécurité

PROTECTION RATING SCHUTZGRAD INDICE DE PROTECTION

The protection rating ensures the operational safety of luminaires. The first number specifies the extent of the protection against the ingress of foreign bodies; the second number identifies the humidity protection grade. All luminaires in this catalogue are at least protected with the rating IP20 - a higher rating is specified in the information box of the luminaire.

Der Schutzgrad gewährleistet die Betriebssicherheit von Leuchten. Die erste Ziffer des IP Grades beschreibt den Schutzzumfang gegen das Eindringen von Fremdkörpern, die zweite Ziffer informiert über den Grad des Feuchtigkeitsschutzes. Alle Leuchten in diesem Katalog sind mit mindestens Schutzgrad IP20 gesichert, bei höheren Graden wird das Symbol im Infokasten der Leuchte angegeben.

L'indice de protection assure la sécurité opérationnelle des luminaires. Le premier chiffre indique à quel point la protection est efficace contre l'insertion de corps étrangers; le second chiffre indique quant à lui le degré de protection par rapport à l'humidité. Tous les luminaires dans ce catalogue sont protégés au moins avec l'indice IP20 - un indice plus élevé est indiqué dans l'information d'article.

LUMINOUS COLOUR / FLUX LICHTFARBE / -STROM COULEUR / FLUX LUMINEUX

The colours of the LED are represented as pictogrammes (see below), their luminous flux directly beneath. The luminous flux is quoted in lumen and describes the amount of light generated by the LED. The higher the value, the brighter is the lamp.

Die Farben der LED werden als Piktogramm (siehe unten) dargestellt, deren Lichtstrom direkt darunter. Der Lichtstrom wird in Lumen gemessen und gibt die erzeugte Lichtmenge der LED an. Je höher der Wert, desto heller das Produkt.

Les couleurs de LED ont représentés sous forme de pictogrammes, leur flux lumineux directement en dessous. L'unité de flux lumineux est le lumen et il mesure la quantité de lumière générée par les LED. Plus la valeur est élevée, plus la lampe est lumineuse.
