The Aeration project is completed. All aerators are running. It may be there are two aeration heads in Rainbow that have bad air lines as well as one head in Mirror that also has a bad line but these cannot be addressed until spring thaw.

There is now water flow under the ice in Meadow Lake. This may cause deterioration of ice depth in the main channel along the Meadow Lake Drive shoreline. Use caution if walking on discolored ice at this time.

The good new is the holes which are open on those two lakes should be sufficient to get us through the winter with no fish kills.
