## Oxygen therapy

Virtual mesotherapy, needle-free mesotherapy or mesoporation is a modern non-invasive, clinically tested and safe method for face and body care. Mesoporation uses a probe to introduce active and high-molecular ingredients into the deeper layers of the skin, and this method makes the use of a needle completely needless. It is used to rejuvenate and hydrate the skin, remove and reduce wrinkles, perform mesobotox, i.e. achieve a mild effect of Botox treatment (toxin-free), carry out skin tightening and lifting, as well as reduce and eliminate hyperpigmentation, redness and dilated capillaries, melasma and baldness in both men and women. Thanks to the breakthrough molecular oxygen delivery system, it encourages the formation of new, healthy skin cells and bolsters all the natural functions of the existing ones. By stimulating lymph flow, it acts as an anti-inflammatory agent.

## Diamond microdermabrasion

Microdermabrasion is a procedure that gently removes the epidermis, subsequently ensuring safe removal of dead cells from the outermost layers of the skin, resulting in accelerated cell turnover and increased collagen synthesis in the deeper layers of the skin. It significantly reduces the wrinkle severity, helps with scars, enlarged pores and pigmentation alteration. After the treatment, the skin will be regenerated, refreshed and smoothed. This procedure is individually tailored to all blemishes and skin types. Not recommended for people with skin diseases (e.g. herpes), inflammatory processes, rosacea or diabetes. The treatment is performed in combination with a special mask and massage.

TREATMENT PRICE – 85,00 €

## Ultrasound Facial

Ultrasound beauty therapy is a non-invasive treatment based on mesotherapy that enables delivery of active substances deep into the skin layers and activates the tissue regeneration processes, leaving the face looking fresher and shinier. The treatment is suitable for all skin types, and it is effective in skin rejuvenation and deep skin hydration, elimination and reduction of wrinkles, skin tightening and lifting, reduction and removal of hyperpigmentation, and reduction of skin redness and dilated capillaries. Excellent as a top-up to any beauty treatment, or as a stand-alone treatment.

TREATMENT PRICE (20 MIN) – 20,00 €

## Ultrasonic facial cleansing

It is used for professional exfoliation and deep cleansing of the face. Ultrasonic facial cleansing is a non-aggressive method of deep cleansing, i.e. removing all impurities from the face. The ultrasonic spatula simultaneously opens the pores and deeply cleanses them along with blackheads, removes the layer of dead cells from the surface of the skin and improves oxygen delivery to cells. The results are visible purity, tightness and refreshment, as well as increased blood flow and skin hydration, with no redness and irritation afterwards. The treatment is adaptable to all skin types, and is especially recommended for people who have sensitive skin (e.g. acne, couperosis, hyperpigmentation). It also works as an anti-aging treatment. This facial cleansing treatment is also very good in combination with the classic treatment where it comes as a final phase because it enhances the absorption of active and nutritious skin care ingredients and soothes the skin itself.

TREATMENT PRICE (20 MIN) – 20,00 €

## Galvanic Facial

Galvanic beauty therapy is used for tissue activation and vascularisation. The galvanic current improves penetration of charged molecules into the skin, which significantly increases skin care effectiveness. The treatment is effective in skin moisturisation and revitalisation, as well as in lymphatic flow and blood circulation improvement. Excellent for skin cleaning and sebum reduction.

## HI-EMT TESLA SCULPT device

HIEMT (High Energy Focused ElectromagneticWave) technology allows for extreme training that encourages creation of new proteins and chain fibers to increase muscle mass, density and volume. Muscle tissue is exposed to supramaximal contractions to which it must adapt, which ultimately results in muscle building and tightening, toning and fat burning. Therefore, it can be said that it has a double effect – fat reduction and simultaneous muscle building.

Effective even in the face of most obstinate fat deposits, this device is intended for those who want to quickly reduce fat and build muscle mass or change their body shape. It comes in handy for those who won't bother to try their hand at persistent exercise, as well as women after childbirth. The device is non-invasive, safe and painless; there's no radiation, no side effects, and you can lose weight while lying down. You can even tighten your muscles. There is no discomfort during treatment and no recovery period afterwards. It penetrates muscles up to 8 cm, and encourages continuous expansion and contraction of muscles in order to induce the growth of myofibrils and thus create new collagen chains of muscle fibers.
