

Course Outline | Dreamweaver Introduction

1 day(s)

Overview

You want to create and maintain web pages for your website. The fundamental elements of a web page are HTML, XHTML, CSS, and some JavaScript. These technologies take some time to master. In this course, you will use Adobe Dreamweaver to create web pages while focusing on the content, styling, and design. As you construct the web pages, Dreamweaver will competently create the XHTML, CSS and JavaScript required.

You will also maintain and administer your website with Dreamweaver's site and page management tools. The website and pages you create will reflect your content and design and will be professionally accurate for your site visitors.

Objectives

- Identify Dreamweaver fundamentals
- Create websites
- Create web pages
- Insert tables and import content into web pages
- Create reusable site assets
- Link web pages and send the website to the server

Target Student

This course is most valuable for individuals who have been given responsibilities to create or maintain a website. It will also be valuable for new web designers, web developers, and graphic artists who want to extend their skills in creating complete websites. Learning how to use Dreamweaver will enable the practitioner to create web pages and sites in the most efficient manner.

Prerequisites

To ensure success in this course, you should have basic personal computing skills. For accelerated learning and deeper understanding of this course, it is also recommended that you have some exposure to various web design technologies.
