

Course Outline | Excel Advanced

1 day(s)

Overview

This course builds on the foundational and intermediate knowledge presented in the earlier course and your previous Excel experience to help you get the most from the software. The ability to collaborate with colleagues, automate complex or repetitive tasks, and use conditional logic to construct and apply elaborate formulas and functions will give you the full power of Excel at your fingertips. The more you learn about how to get Excel to do the hard work for you, the more you'll be able to concentrate on getting the answers you need from the vast amount of data produced by organizations.

Course Requirements

To ensure success, learners should have practical experience creating and analyzing datasets using Excel. Specific tasks learners should be able to perform include: creating formulas and using Excel functions; creating, sorting, and filtering datasets and tables; presenting data by using basic charts; creating and working with PivotTables, slicers, and PivotCharts; and customizing the Excel environment.

What You Will Learn

In particular you will be able to:

- Use Pivot Tables
- Work with multiple worksheets and workbooks simultaneously
- Share and protect workbooks
- Automate workbook functionality
- Apply conditional logic
- Audit worksheets
- Present your data visually using Charts
