All the breeding stock in Qatar are DNA typed and parentage verification is compulsory for foals since 1998. The registration authority in Qatar has used the Trovan microchip system up to 31 December 2005 and after that date the ISO system.

The use of Embryo Transfer is permitted, with no limit set on the number of foals per mare per year.

For imported horses, the ISO Code of the country of birth is included after the horse's name, the ISO code does not form part of the registered name.

Breeders and owners are requested to examine the entries of their horses in this studbook and to notify the registration authority of any errors, in order that these may be corrected.
