

WASTEMAX

Description

WASTEMAX is a solid tyre developed by BKT for wheel loaders operating at scrap yards, waste handling facilities, and demolition sites. The tyre's solid construction significantly reduces the risk of tyre failure from cuts, punctures, and chunks caused by sharp debris, making WASTEMAX a highly cost-effective solution. Moreover, the particularly cut-and-chip-resistant compound offers exceptional protection against abrasive materials, while the deep tread design maximizes tyre life and reduces machine downtime. WASTEMAX features a reinforced bead structure that prevents rim slippage in challenging waste-handling operations. In addition, sidewall apertures provide an excellent cushioning effect, ensuring a smoother ride and improved operator comfort during long service hours.
