

BKT AGRIFORCE BK T71

PRODUCT DATA SHEET

DESIGNED FOR
COMBINE HARVESTERS

BKT AGRIFORCE BK T71

 AGRIFORCE BK T71 is BKT's positive-drive rubber track specifically designed for combine harvesters. This advanced rubber track is built to deliver exceptional durability, efficiency, and reliability in the most demanding agricultural environments. The endless belting design has been engineered for minimal track adjustments. The combination of high tensile steel cord with multiple steel-ply layers in the casing provides better dimensional stability and enhances the track life in extreme conditions. The AGRIFORCE BK T71 tread is made of a high-performance compound providing excellent resistance against abrasion, tears and cuts caused by stubble and stones increasing the track's longevity. The tread lugs have been designed specifically to improve comfort on the road and facilitate self-cleaning in the field, while the increased center opening between the lugs ensures better traction and reduces uneven wear. The reinforced carcass has been specifically designed to withstand higher heat build-up during high-speed roading (up to 40 km/h) and offers excellent fuel efficiency and lower power consumption.
