

THE SMARTER WAY TO RUN YOUR FARM

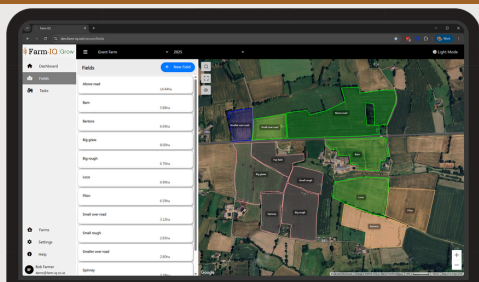

Farm-IQ Grow – a comprehensive farm management platform that seamlessly integrates fields, crops, soil data, with task planning and confirmation.

Farm-IQ Grow brings your entire farm together through clear, visual mapping and integrated data. Fields, crops, soil information and plans are all layered into one intuitive map, giving you instant visibility and a better understanding of what's happening across your farm.

Built for multi-user collaboration, it connects your whole team in one system. Staff, contractors and advisors all work from the same live data, improving communication and ensuring a single, accurate source of truth. Tasks can be planned centrally and shared instantly, with progress and confirmations flowing back from the field through seamless integration with FieldOps—a simple mobile app for operators to view, complete and confirm work directly from the tractor or field.

With precision farming and soil nutrition at its core, Farm-IQ Grow helps you turn data into action. Visualise soil results, apply recommendations and manage variability across fields with confidence—supporting smarter decisions, optimised inputs and improved crop performance.

Farm Overview

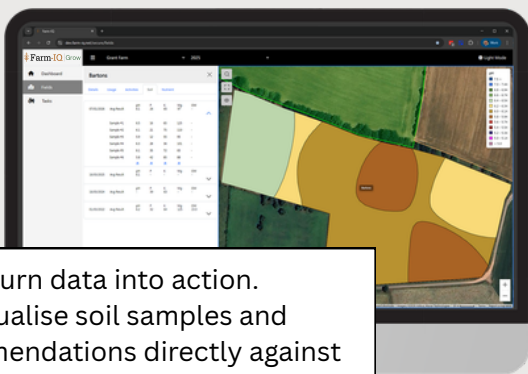

Manage your entire farm in one place. View fields, crop seasons and boundaries, with clear crop mapping across your land.

Crop Planning

Plan and manage crop seasons, colour fields by crop for quick visibility and track crop history and rotations.

Soil and Insights

Turn data into action. Visualise soil samples and recommendations directly against your fields for better decisions.

Task Management

Plan and track work with ease. Create tasks by crop or field and confirm completion seamlessly with FieldOps.
