

DELHI METRO RAIL CORPORATION LTD. (Metro Bhawan, Fire Brigade Lane, Barakhamba Road, Delhi-110001)

Roll No:	
Participant Name:	
Test Center Name:	
Test Date:	13/04/2018
Test Time:	4:30 PM - 6:45 PM
Subject:	Jr. Engineer Civil RNE04

Q.1 Hyetograph is a graph representing rainfall intensity against	
Ann Maria	
Ans X 1. runoff	
× 2. velocity	
× 3. volume	
✓ 4. time	
Q.2 The measurement of how effective the irrigation system is in storing water in the crop root zone, is ter	med as:
Ans X 1. water use efficiency	
√ 2. water application efficiency	
→ 3. water conveyance efficiency	
X 4. water treatment efficiency ✓ 4. water treatment efficiency	
Q.3 A trunnion axis can also be termed as:	
Ans 1. Horizontal axis	
× 2. Vertical axis	
 ✗ 3. the instrumental axis ✗ 4. Diagonal axis 	
Magorial axis	
Q.4 The property of a fluid which offers resistance to the movement of one layer to another adjacent layer is called	
Ans 1. viscosity	
X 2. slip	
X 3. opacity X 3. opacity	
X 4. velocity √ 4. velocity	
Q.5 Special repair work carried out every fourth year is known as	
Ans 1. quarter repair	
✓ 2. quadrennial repair	
X 3. fourth cum repair X 3. fourth cum repair	
X 4. special repair	
Q.6 चेयरमैन की लापरवाही के कारण होने वाली बुटियां कहलाती हैं।	
Ans × 1 संचयी बुटियां	
🔀 2. प्रतिकारी बुटियां	
🔀 ः अस्थायी बुटियां	
४ ⁴. गलतियां	
Q.7 Which of the following precautions must be taken while centering the alidade with the sta	ation pin
Ans X 1. Alidade should be centered on the opposite side of the station pin.	
★ 2. Keeping the alidade on the right of the station pin is ideal.	
X 3. Keeping the alidade on the front of the station pin is ideal.	
✓ 4. Keeping the alidade on the left of station pin is ideal.	
✓ 4. Keeping the alidade on the left of station pin is ideal.	

00		
	The atmospheric pressure head of water is:	Question ID : 5121163025
Ans	0.51 III	
X 2. 25.51 m X 3. 12.32 m		
Q.9	The out turn of a labour in disposal of surplus earth	within a lead of 30 m is:
Ans	√ 1. 2.83 m³ per day	
	× 2. 2.5 m³ per day	
	X ³ . 2 m ³ per day	
	X 4. 1.5 m³ per day	
		g*
	The study of fluid motion involving the consideration of the force	s and energies causing the flow of fluid is called
Ans	★ 1. statics of fluid flow	
	✓ 2. dynamics of fluid flow	
	× 3. kinematics of fluid flow	
	X ⁴ steady laminar flow	
2.11	The value of unit power developed by a turbine is e	qual to:
Ans	P	
	✓ 13 H ²	
	× 2. P H ²	
	311.2	
	\times 3. $\frac{P}{\sqrt{H}}$	
	, P	
	★ 4. P	
Q.12	The size of a theodolite is defined according to the:	Question ID : 5121163011
Ans	X 1.	
	diameter of the main vertical graduated circle.	
	× 2. diameter of the telescope.	
	× 3. diameter of the eyepiece.	
	4.	
	diameter of the main horizontal graduated circle.	
Q.13	Due to which of the following reasons is a plane tab	ole survey preferred?
Ans	★ 1. Can be operated under rain also.	
	✓ 2. There is no possibility of omitting the necessary	ary measurements.
	★ 3. Its fitting arrangement is perfect.	
	★ 4. The instrument is easy to carry.	
3 14	Which 66 Harden America 4 Land Land	-511110
	Which of following stones has the least percentage	of water absorption by volume?
1110	✓ 1. Granite✓ 2. Slate	
	× 3. Shale	
	× 4. Quartzite	
		D. 1002 P. 204
	If the staff reading of a succeeding point is smaller	han that of a preceding point it indicates
Ans	✓ 1. a rise	
	× 2. no change	
	× 3. a rise and fall	
	X⁴. a fall	
2.16	Which type of wall may be used when drop height i	s more than 1.5 m?
Ans		

ı	X 1. Vertical drop wall
	✓ 2. Baffle wall
	3. Straight glacis types wall
	Control Contro
	X 4. Well type wall
	The shrinkage index is equal to:
Ans	★ 1. shrinkage limit-plastic limit.
	X 2. liquid limit-shrinkage limit.
	✓ 3. plastic limit-shrinkage limit.
	★ 4. liquid limit-plastic limit.
Q.18	For delay in completion and for bad work, the contractor is liable to pay a maximum penalty of an amount equal to:
	× 1. 8% of the total contract amount.
	× 2. 1% of the total contract amount.
	× 3. 5% of the total contract amount.
	✓ 4. 10% of the total contract amount.
Q.19	The basic principle of survey "working whole to part" is related to:
	1. making plotting easier.
	× 2. making plotting centre to boundary.
	✓ 3. localising minor errors.
	The state of the s
	★ 4. minor errors will be magnified and uncontrollable.
Q.20	Two soil samples A and B have porosities $nA = 40\%$ and $nB = 60\%$ respectively. What is the ratio of void ratio $eA : eB$?
Ans	X 1. 5 ; 2
	X 2. 1 : 3
	X 3. 7:4
	√ 4. 4:9
Q.21	Runner with buckets are shaped in such a way that the jet gets deflected through:
Ans	X 1. 170° to 180°
	× 2. 210° to 220°
	X 3. 150° to 160°
	✓ 4. 160° to170°
Q.22	An average artisan will be able to complete of 12 mm-thick plastering with cement mortar per day.
Ans	✓ 1. 8 m²
	× 2. 15 m ²
	X 3. 5 m ²
	× 4. 16 m ²
Q.23	The quickest method for determination of water content is
	X 1. torsion balance method
	× 2. sand bath method
	X 3. oven drying method
	✓ 4. calcium carbide method
Q.24	A sample of saturated sand has a dry unit weight of 18 kN/m³ and a specific gravity of 2.7.If y _{water} is 10 kN/m³, the voi
	ratio of soil sample will be:
	X 1. 0.7
	× 2. 0.3
	√ 3. 0.5
	★ 4. 0.8
Q.25	The tangent to the longitudinal surface of the bubble tube is known as
Ans	1. profile of the bubble
	Promise and odder

	✓ 2. axis of the bubble
	X 3. centre line of the bubble
	★ 4. centre angle of the bubble
Q.26	Surcharge storage is a/an
Ans	X 1. dead storage
	× 2. bank storage
	× 3. valley storage
	✓ 4. uncontrolled storage
	The Control of the Control of the Mark
	Select the correct size of septic tank for 10 users.
Ans	\times 1. 2.5 × 0.75 × 1 m
	X 2. 1.2 × 0.6 × 0.9 m
	✓ 3. 1.8 × 0.6 × 0.9 m × 4. 2.8 × 0.75 × 1 m
	18 12 STANDAY DISENSE OF SHOULD
	The amount of water stored in a river channel without any artificial storage is called
Ans	★ 1. river storage
	✓ 2. valley storage
	X 3. dead storage
	X 4. bank storage
Q.29	The maximum stripping value of aggregates in bituminous construction should NOT be more than
	X 1. 18%
	✓ 2. 25%
	★ 3. 5%
	★ 4. 10%
Q.30	Lacustrine soils are transported by
	× 1. rivers
	× 2. seas
	✓ 3. lakes
	× 4. wind
Q.31	A perched aquifer is found within a/an
	× 1. aquiclude
	✓ 2. unconfined aquifer
	× 3. confined aquifer
	X 4. aquitard
Q.32	The water which can be utilised by the crops from the soil is called as
Ans	★ 1. hygroscopic water
	★ 2. duty of water
	✓ 3. capillary water
	× 4. field water
	rating to a proportion and the proportion of the
U 33	The permissible limit of moisture content for doors is:
	X 1. 11-13%
	★ 1. 11-13%✓ 2. 12-20%
	 ★ 1. 11-13% ★ 2. 12-20% ★ 3. 7-9%
Ans	 ★ 1. 11-13% ★ 2. 12-20% ★ 3. 7-9% ★ 4. 3-5%
Ans	 ★ 1. 11-13% ★ 2. 12-20% ★ 3. 7-9%
Ans	 ★ 1. 11-13% ★ 2. 12-20% ★ 3. 7-9% ★ 4. 3-5%

× 2. Q H ³
X 3.
3.4 € C
\checkmark 4. $\frac{Q}{\sqrt{H}}$
Q.35 Which of the following methods uses dead furrows on cropped farms for drainage of excess irrigation of rain water
Ans X 1. Fresh drain
★ 2. Surface inlet
X 3. Tile drainage
✓ 4. Bedding
Q.36 Blaine's Air Permeability Apparatus is used to measure
Ans 1. Fineness of cement
★ 2. Initial setting time of cement
★ 3. Permeability of cement
X 4. Compressive strength of cement ✓ 4. Compressive strength of cement
Q.37 The correct sequence of temporary adjustment is
Ans 1. setting, leveling, elimination of parallax
★ 2. elimination of parallax, Setting , leveling
★ 3. leveling, setting, elimination of parallax
★ 4. elimination of parallax, leveling, setting
Q.38 The value of the planimeter constant is added only when:
Ans X 1. the anchor point is outside the area.
★ 2. the anchor point is just on the boundary line.
✓ 3. the anchor point is inside the area.
★ 4. the anchor point is beyond the outside area.
Q.39 Mass, voluminous and thick work shall be taken in
Ans X 1. running units
✓ 2. cubic units
X 3. per day
X 4. square units
Q.40 The compressive strength of building stones:
Ans 1 ranges between 60 to 200 N/mm ² .
× 2. ranges between 6 to 20 N/mm ² .
₹ 3. ranges between 600 to 2000 N/mm ² .
★ 4 ranges between 50 to 1200 N/mm ² .
Q.41 Which of the following is a drier in paints?
Ans X 1. Poppy oil
✓ 2. Litharge and its component
X 3. Tung oil X 3. Tung oil X 3. Tung oil
X ⁴. Linseed oil
Q.42 In which unit is explosive for blasting measured?
Ans 🗸 1. Per kg
× 2. Per square meter
X ₃ Per number
X 4. Per meter

Q.43 Land is said to be waterlogged when: Ans 1. the soil pores in root zone get saturated with water either by actual water table or by its capillary fringe. 2. there is flowing water over the land.
 3. pH value of soil becomes as high as 8.5. 4. the land is necessarily submerged under standing water.
Q.44 Specification is NOT dependent upon the Ans 1 quantity of material 2 quality of material 3 nature of work 4 availability of material
Q.45 The terms 'great triangle' and 'great circle' are used in a survey. Ans
Q.46 The mass specific gravity of a fully saturated specimen of clay having a water content of 40% is 1.88. On oven drying, if mass specific gravity drops to 1.74 then the specific gravity of clay will be: Ans
Q.47 Distemper is made with as base. Ans
Q.48 If the rate of interest is 6% per annum then the year's purchase is: Ans
Q.49 The measurement is NOT made in metre in case of Ans
O.50 Bulk density of soil is equal to the: Ans 1 total mass of soil / total volume of soil 2 mass of solids / volume of solids 3 mass of solids / the total volume of soil 4 dry density of the soil
Q.51 About 80% irrigation efficiency is possible with the sprinkler irrigation particularly in: Ans

```
Q.52 बैक्टीरिया कंक्रीट वह कंक्रीट है जो:
    दरार को स्वतः ठीक करने की क्षमता रखता है।
     🔀 2 प्रदुषित वातावरण में प्रयोग किया जाता है।
     🔀 ३. समुद्री वातावरण में प्रयोग किया जाता है।
     🗡 4 बैक्टीरिया से प्रभावित होता है।
Q.53 Shallow, thin and surface works shall be measured in:
Ans X 1. running units
     X 2. cubic units

√ 3. square units

     X 4. in numbers
Q.54 The compressive strength of thermocol is within the range of:
Ans X 1. 7 to 44 N/mm<sup>2</sup>
     ✓ 2. 11.7 to 14.4 N/mm<sup>2</sup>
     X 3. 1.7 to 14.4 N/mm<sup>2</sup>
     X 4. 1.4 to 7.4 N/mm<sup>2</sup>
Q.55 Select the INCORRECT statement regarding a soak pit.
    The soak pit shall not be more than 1.5 m in depth below invert level of the inlet pipe.
     X 2. No surface water should be allowed to enter into the soak pit.
     X 3. The soak pit shall not be less than 90 cm.
     Y 4. The soak pit should be raised above the ground level.
Q.56 The geological formation which contains and easily yields water to our tube wells is called an
Ans X 1. aquiclude
     🗸 2. aquifer
     X 3. aquitard
     X 4. aquifuse
Q.57 While levelling on steep slopes it is preferable to set up the instrument successively along the
Ans X 1 curved line
     × 2. slope line

√ 3. zigzag line

     X 4. straight line
Q.58 Loam is a mixture of
Ans 1. sand, silt and clay
     X 2. clay and montmorillonite
     X 3. clay and silt
     X 4. gravel and red clay
Q.59 When high flood drainage is large but short-lived the crossing is a
Ans X 1. siphon
     X 2. aqueduct
     X 3. super passage

✓ 4. level crossing

Q.60 The coefficient of permeability of clay is generally:
    \times 1. between 10<sup>-3</sup> and 10<sup>-2</sup> mm/s
```

```
√ 2. between 10<sup>-8</sup> and 10<sup>-5</sup> mm/s

      X 3. less than 10<sup>-8</sup> mm/s
      \times 4. between 10<sup>-7</sup> and 10<sup>-4</sup> mm/s
Q.61 Which of the following materials is recommended for roofing?
Ans X 1. PVC
      X 2. Thermocol

√ 3. Asbestos

      X 4. Nylon
Q.62 Unnecessary hurry at the time of plotting may lead to a/an ___
 Ans X 1. instrumental error
      X 2. scale error
      X 3. shrinkage error

✓ 4. plotting error

Q.63 The water application efficiency does NOT depend upon:
 Ans X 1 method of application.
      X 2. type of soil.
      X 3. climatic condition.

✓ 4. geometry of the conveyance system.

Q.64 If there is flow from a soil of permeability k_1 to k_2, the angles \theta_1 and \theta_2 which the flow line makes with the normal to
      the interface are related as:
 Ans \checkmark 1. \tan \theta_1 / \tan \theta_2 = k_1 / k_2
      \times 2 \sin \theta_1 / \sin \theta_2 = k_1 / k_2
      \times 3. \cot \theta_1/\cot \theta_2 = k_1/k_2
      \times 4. \cos \theta_1 / \cos \theta_2 = k_1 / k_2
Q.65 In the design of gravity dam, magnitude of ice pressure generally varies from depending on temperature variation.
 Ans X 1. 350 to 1,500 kN/m<sup>2</sup>
      X 2. 200 to 1,500 kN/m<sup>2</sup>
      X 3. 450 to 1,500 kN/m<sup>2</sup>

√ 4. 250 to 1,500 kN/m<sup>2</sup>

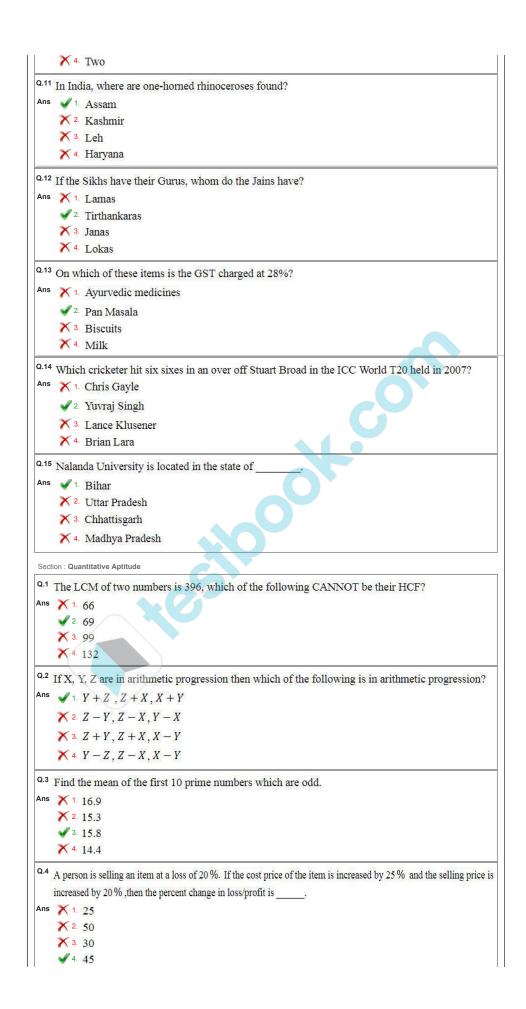

Q.66 Out turn of the mason for Reinforced Cement Concrete (R.C.C.) work is:
 Ans X 1. 4 m<sup>3</sup>
      X 2. 2 m<sup>3</sup>
      X 3. 1.5 m<sup>3</sup>
       √ 4. 3 m<sup>3</sup>
Q.67 Which of the following statements is INCORRECT?
Ans 1. Contour interval on a map can vary.
      X 2. Contour lines cross a ridge at right angles.
      X 3. The contour lines are closed curve.
      X 4.
     In steep slopes, the spacing of a contour is small.
Q.68 How much cement is required for 12 mm thick plastering with cement mortar 1:6 for 1 sq m area?
Ans X 1. 3.2 kg
      X 2. 12.2 kg
      X 3. 9.2 kg

√ 4. 6.2 kg

Q.69
```

The	e item of steel work which is measured in square meter is
Ans 🗙	1. fabrication and hoisting of steel work
	2 rolled steel joint, channels, angles and t- irons.
	3 fabric reinforcement, wire netting
	The product of the control of the co
^	4. bending, binding of steel reinforcement
^{2.70} हॉर्व	ने के आकार वाली ऊसंधि निम्न प्रकार से ट्यवहार करती है:
Ans X	1 विक्षेपित ऊसंधि
X	² निरोधक ऊसंधि
V	अाकृष्ट ऊसंधि
×	4 डेनेहे की ऊसंधि
Q.71 Fin	d the annual depreciation by the constant percentage method where D = annual depreciation, C = original cost,
	scrap value and n = life of the property in years.
Ans	1. $D = 1 - \left(\frac{C}{c}\right)^n$
	$D-1$ $\binom{2}{5}$
V	2 D = 1 - $\left(\frac{S}{c}\right)^{\frac{1}{n}}$
X	$3. D = 1 - \left(\frac{s}{c}\right)^n$
×	4. $D = 1 - {c \choose c}^{\frac{1}{n}}$
	$D = 1 - \left(\frac{z}{s}\right)^{n}$
	drainage water is sometimes allowed to join the canal water to augment canal supplies through a hydraulic structure

Q.5 If the equation 2x^2 - kx + k = 0 has equal roots, then k = 0
Ans X 1. 4
     X 2. 8 only
     3. 0, 8
     X 4. 0 only
Q.6 At what simple rate of interest per annum will a sum grow three times at the end of 8 years?
Ans X 1. 18%
     X 2. 22%

√ 3. 25%

     X 4. 20%
Q.7 A ladder just reaches the top of a 18 m high building. If the ladder makes an angle of 30° with the ground, what is the leng
    of the ladder?
Ans × 1. 12√3 m
     × 2. 18√2 m
     \times 3. 18\sqrt{3} m
     √ 4. 36 m
Q.8 A and B are two places 150 km apart. Two car starts from A and B move towards each other and meet at a point C in 1.5 h
   If speed of the car at A is 60 km/h, what is the speed of car at B?
Ans X 1. 45 km/h

√ 2. 40 km/h

     X 3. 50 km/h
     X 4. 54 km/h
By selling an article at a certain price, a man gets 10% profit. On selling the same article at \frac{3}{2} times the price, his
    percentage profit will be
Ans 1. 65%
     X 2. 60%
     X 3. 75%
     X 4. 50%
Q.10 Two angles of a triangle are 30 and 60; find the ratio of the sum of first two angles to the third angle.
Ans X 1. 1 : 2
     X 2. 2:1
     √ 3. 1 : 1
     X 4. 1:3
Q.11 12 men working 8 hours a day complete a work in 14 days. In how many days 4 men and 6 women working 7 hours a day
    will complete same work, if 2 men do as much work as 3 women?
Ans X 1. 30
     X 2. 35
     X 3. 32
     4 4. 24
Q.12 The value of tan (765°) is ____
Q.13 Find the least number which when decreased by 20 is exactly divisible by 18, 21, 28.
Ans X 1. 212
```

	, Veena finished faster than Sheena, and Sasha finished faster than Asl I after Sheena, who among the given friends won the slow cycle race?
Ans X 1. Sasha	latter sheerid, who dividing the given friends wor the slow eyere face.
× 2. Bela	
✓ 3. Asha	
× 4. Leela	
1008 E. Proposition	he same way as the second term is related to the first term.

 ★ 1. When open chest freezers are used in hot air balloons. ★ 2. When the balloon is heavier than air. ★ 3. When the air inside the envelope is heated. ★ 4. When the passengers reduce the weight of the balloon. 	

Have you ever wondered what keeps a hot air balloon flying? The same principle that keeps food frozen in the open chest freezers at the grocery store allows hot air balloons to fly. It's a very basic principle: Hot air rises and cold air falls. So while the super-cooled air in the grocery store freezer settles down around the food, the hot air in a hot air balloon pushes up, keeping the balloon floating above the ground. In order to understand more about how this principle works in hot air balloons, it helps to know more about hot air balloons themselves.

A hot air balloon has three major parts: the basket, the burner, and the envelope. The basket is where passengers ride. The basket is usually made of wicker. This ensures that it will be comfortable and add little extra weight. The burner is positioned above the passenger's heads and produces a huge flame to heat the air inside the envelope. The envelope is the colorful fabric balloon that holds the hot air. When the air inside the envelope is heated, the balloon rises.

The pilot can control the up-and-down movements of the hot air balloon by regulating the heat in the envelope. To ascend, the pilot heats the air in the envelope. When the pilot is ready to land, the air in the balloon is allowed to cool and the balloon becomes heavier than air. This makes the balloon descend.

Before the balloon is launched, the pilot knows which way the wind is blowing. This means that she has a general idea about which way the balloon will go. But, sometimes the pilot can actually control the direction that the balloon flies while in flight. This is because the air above the ground is sectioned into layers in which the direction of the wind may be different. So even though the pilot can't steer the balloon, she can fly or higher or lower into a different layer of air. Some days the difference between the direction of the wind between layers is *negligible*. But other days the difference is so strong that it can actually push the balloon in a completely different direction!

Ans X 1. envelope

2. basket

3. burner

4. wicket

Comprehension

Have you ever wondered what keeps a hot air balloon flying? The same principle that keeps food frozen in the open chest freezers at the grocery store allows hot air balloons to fly. It's a very basic principle: Hot air rises and cold air falls. So while the super-cooled air in the grocery store freezer settles down around the food, the hot air in a hot air balloon pushes up, keeping the balloon floating above the ground. In order to understand more about how this principle works in hot air balloons, it helps to know more about hot air balloons themselves.

A hot air balloon has three major parts: the basket, the burner, and the envelope. The basket is where passengers ride. The basket is usually made of wicker. This ensures that it will be comfortable and add little extra weight. The burner is positioned above the passenger's heads and produces a huge flame to heat the air inside the envelope. The envelope is the colorful fabric balloon that holds the hot air. When the air inside the envelope is heated, the balloon rises.

The pilot can control the up-and-down movements of the hot air balloon by regulating the heat in the envelope. To ascend, the pilot heats the air in the envelope. When the pilot is ready to land, the air in the balloon is allowed to cool and the balloon becomes heavier than air. This makes the balloon descend.

Before the balloon is launched, the pilot knows which way the wind is blowing. This means that she has a general idea about which way the balloon will go. But, sometimes the pilot can actually control the direction that the balloon flies while in flight. This is because the air above the ground is sectioned into layers in which the direction of the wind may be different. So even though the pilot can't steer the balloon, she can fly or higher or lower into a different layer of air. Some days the difference between the direction of the wind between layers is *negligible*. But other days the difference is so strong that it can actually push the balloon in a completely different direction!

Question ID : 5121163096

Ans 🗸 1. insignificant

X 2. great

X 3. fast

× 4. thick

Comprehension:

Have you ever wondered what keeps a hot air balloon flying? The same principle that keeps food frozen in the open chest freezers at the grocery store allows hot air balloons to fly. It's a very basic principle: Hot air rises and cold air falls. So while the super-cooled air in the grocery store freezer settles down around the food, the hot air in a hot air balloon pushes up, keeping the balloon floating above the ground. In order to understand more about how this principle works in hot air balloons, it helps to know more about hot air balloons themselves.

A hot air balloon has three major parts: the basket, the burner, and the envelope. The basket is where passengers ride. The basket is usually made of wicker. This ensures that it will be comfortable and add little extra weight. The burner is positioned above the passenger's heads and produces a huge flame to heat the air inside the envelope. The envelope is the colorful fabric balloon that holds the hot air. When the air inside the envelope is heated, the balloon rises.

The pilot can control the up-and-down movements of the hot air balloon by regulating the heat in the envelope. To ascend, the pilot heats the air in the envelope. When the pilot is ready to land, the air in the balloon is allowed to cool and the balloon becomes heavier than air. This makes the balloon descend.

Before the balloon is launched, the pilot knows which way the wind is blowing. This means that she has a general idea about which way the balloon will go. But, sometimes the pilot can actually control the direction that the balloon flies while in flight. This is because the air above the ground is sectioned into layers in which the direction of the wind may be different. So even though the pilot can't steer the balloon, she can fly or higher or lower into a different layer of air. Some days the difference between the direction of the wind between layers is *negligible*. But other days the difference is so strong that it can actually push the balloon in a completely different direction!

SubQuestion No: 59

Q.59 The pilot can control the ______ movements of the hot air balloon by controlling the heat in the envelope.

Question ID : 5121163097

Ans X 1. westerly

× 2. easterly

3. up and down

X 4. sideways

Q.60 What principle is mentioned in the early part of the passage?

Question ID : 5121163093

Ans X

The principle that results in the formation of ice.

2. The principle that helps to thaw frozen food.

3. The principle that keeps food frozen.

X 4.

The principle of preserving food in hot air balloons.
