

Front-Facing Camera Improve the iPad Pro

Apple has never failed to innovate. They have excelled at design and features with every new release. As the release date for the next generation iPad Pro approaches, new features are always heavily speculated. Currently, the feature that has garnered the most attention is the new front-facing camera. The inclusion of such a feature would signify a great leap and is an indicator that Apple has a few surprises in store with regards to how the new iPad Pro is supposed to blend into the users' ecosystem.

Why a Front-Facing Camera?

The iPad Pro line has always had a rear camera meant for taking photos and recording videos which is usually supplemented with a front-facing camera for video conferencing. While the lamentable front facing camera is an accepted feature during video calls, Apple has stated that video conferencing, live streaming, and content creation, which are an essential part of both work and leisure, is much more important now which is why it's time to make a change to the front-facing camera.

Rumors have it that sources claim that the next iPad Pro has a front-facing camera with higher resolution and better low-light performance. Advanced features such as accurate facial recognition are also heavily speculated.

Enhanced Video Calls and Streaming

Having another upgraded front camera has its own unique privileges. It could help immensely improve the video calling experience. iPads support video calls easily; however, its video quality leaves much to be desired. This setting could be enhanced much more, even while working remotely. The meetings, lectures, and classes could all be attended more effectively with better video calling support.

Lastly, Ziff, the new camera, has advanced and truly innovative features like Center Stage, and video calls can be enhanced to a new level. It automatically sets and adjusts the camera angle to keep the user in the frame while shifting focus, much like a ballet partner. Such additions could enhance video conferencing, making it much more fluid and crisper.

The Bottom Line

Although nothing for certain right now, the opportunity for a new front camera on the iPad Pro has got many users very excited. Upgraded for work, education, or content creation, any iPad Pro is even more versatile. Apple's track record is consistent in enhancing devices, and it is reasonable to expect an enhancement on the iPad Pro. That would solidify its standing in the tablet market. More information is sure to come, especially with the launch of the next iPad Pro on the way.
