

LED TORCH USER MANUAL

Applications:

1. Start and stop the torch

To start the torch, insert the pin (as in the package) into the switch hole and press down the pin.

To stop the torch, again insert the pin into the switch hole and press down the pin.

2. Install the torch

Installation can be done anywhere in case suitable torch model (wall/roof, tree/column, fence/grid) is selected.

3. Charge the torch

The torch is charged automatically when sunshine is available from a good direction. Charging efficiency varies in different weather (sunny day faster than rainy day).

Specifications:

- Solar powered, no battery or electricity wire needed.
- Extremely bright LED with 3W power consumption, 230-250 LM.
- In the night, motion sensor turns light on if someone passes by, and turns it off automatically in about 22 seconds.
