IV.HDD Installation (If already finished,ignore)

Preparation

Remember to click the power off firstly

Installation Step

- 1).Unscrew the screw,remove the cover,connect the data and power cable.

- 2) Stand the DVR chassis sideways, align the holes on the hard disk with the reserved holes at the bottom of the chassis, and fix the hard disk with screws. Cover the chassis cover and secure the cover with screws.

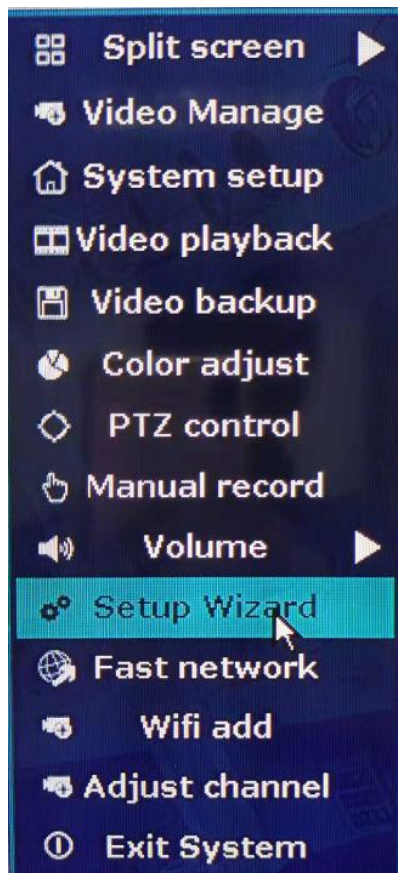

Attention:

- A.Choosing the matched HDD,which can meet the working request of NVR.
- B.After booting,the system will ask to format the hard disk, the original data in the hard disk may be completely lost.
- C.Different hard disk capacities and parameter configuration of the DVR will affect the total length of video data storage.

V.Setting guideline

Click the right mouse button to enter the menu list. (Default login username: admin, no password).

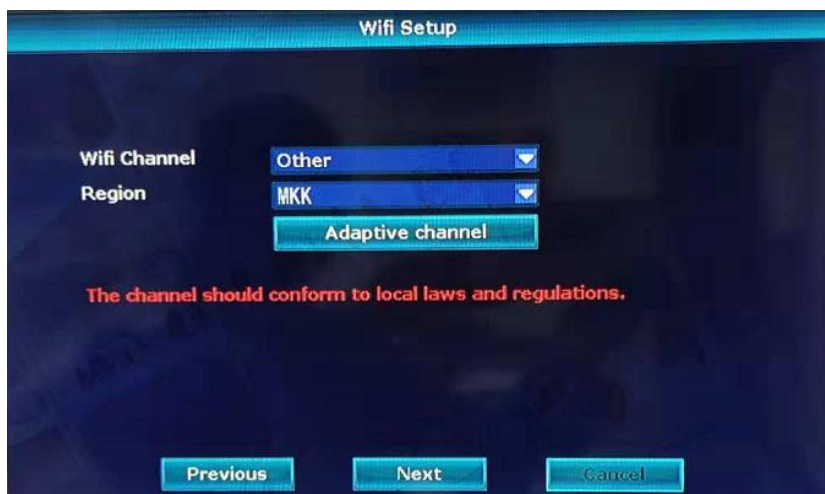

- 1).Split screen selection: single screen / multi screen selection
- 2).Video Management: Used to add a code/delete camera channel.
- 3).System settings: Recording Settings / Network Settings / User Management / Hard Disk Management / Factory Reset and more.
- 4).Video playback: video playback. You can play back video, video backup, etc. according to date, time, and channel.
- 5).Video backup: You can select the corresponding time period for backup.
- 6).Color adjustment: Adjust the color, brightness and so on of the monitor screen.
- 7).Setup Wizard: Recorder Operation Wizard.
- 8).One-click Internet access: for diagnosing network status.
- 9).Wireless add: for adding new camera functions.
- 10).Adjust the channel: for channel interchange, use the mouse to drag the channel to swap.

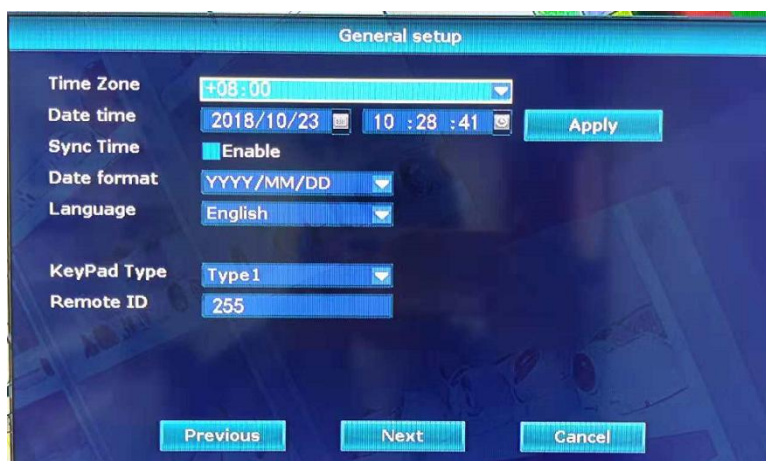

Clicking setup wizard

1, mobile APP: use the mobile phone to scan the corresponding Android or Apple QR code, you can download the APP to the phone. (The cloud ID QR code on the right is added to the mobile app, which will be used later in the APP operation). Click Next again.

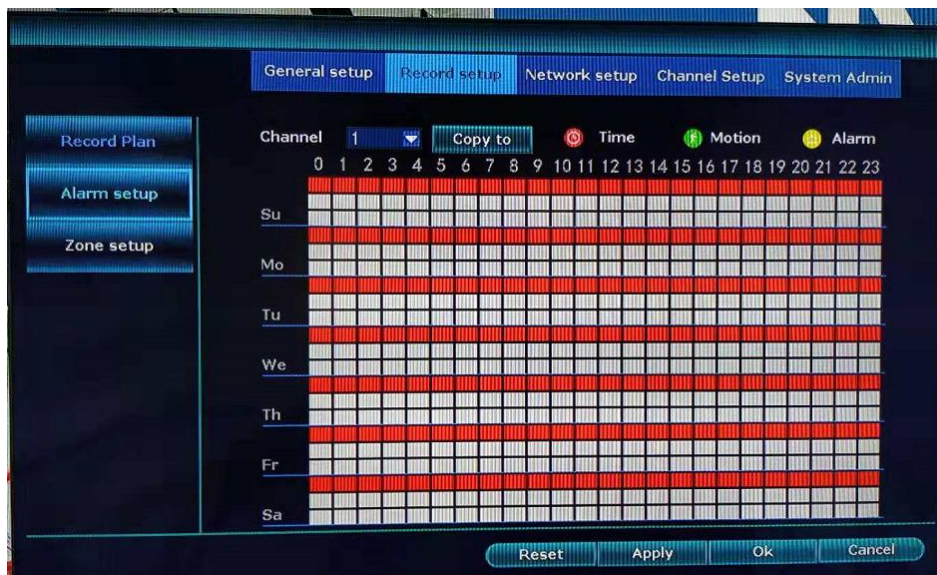

2, wireless settings: the use of wireless channels must comply with local laws and regulations. (If there is no special requirement for monitoring the installation, the default setting can be.) Click Next step.

3, general settings: adjust the time and local time is correct. Click Next step.

4, one-click Internet access: used to diagnose whether the Internet status is normal. (You can skip this step if you are not connected to the network). Click next step.

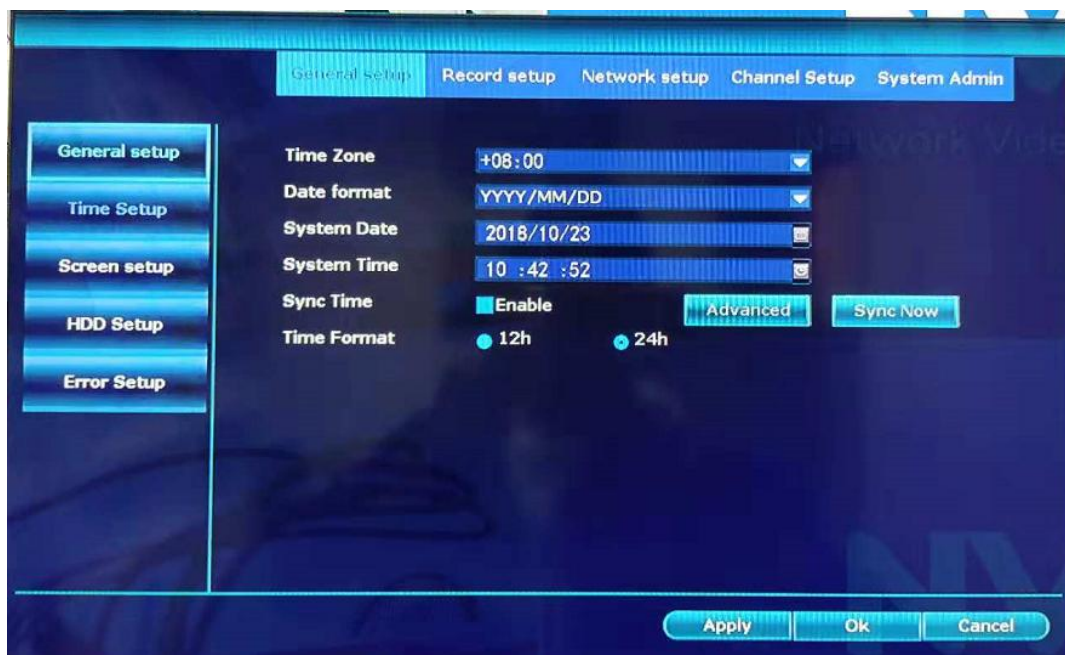

5, HDD settings: After installing the hard disk, it will display the hard disk capacity, usage, status information. (If the status display is not formatted, you need to click format). Then click Finish.

VI: other function settings

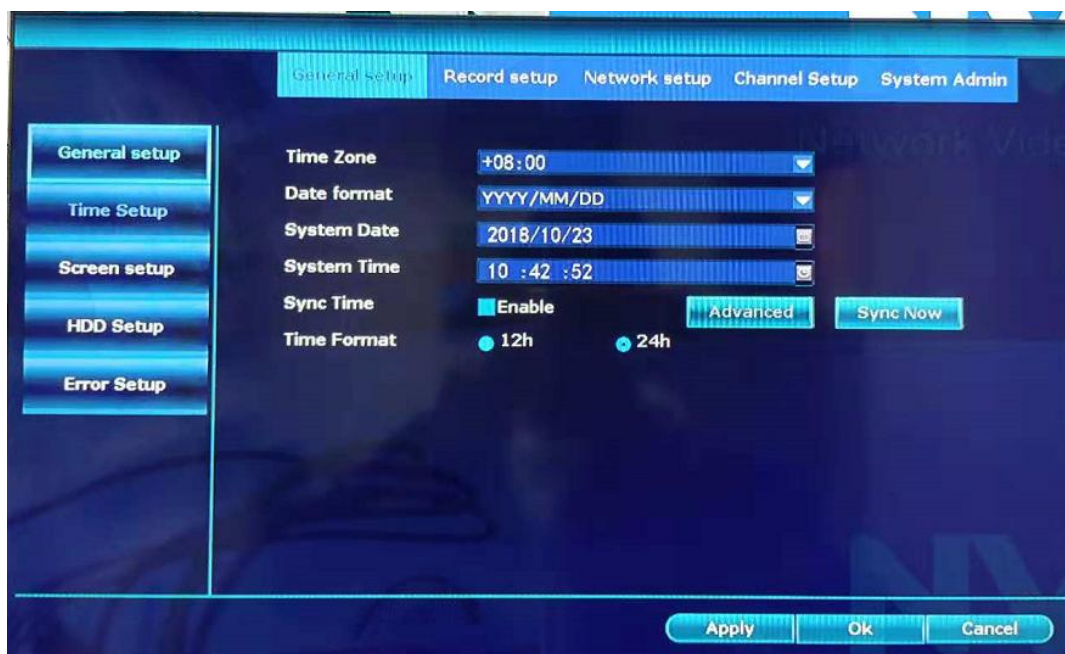

A.Encoding format setting

Click the right mouse button to enter the menu list and select System Settings. Select Channel Settings - Encoding Settings. (The default access to the recorder is the H.264 encoding format. If you connect the H.265 camera to the H.265 encoding format, each channel can be changed to save hard disk storage space.)

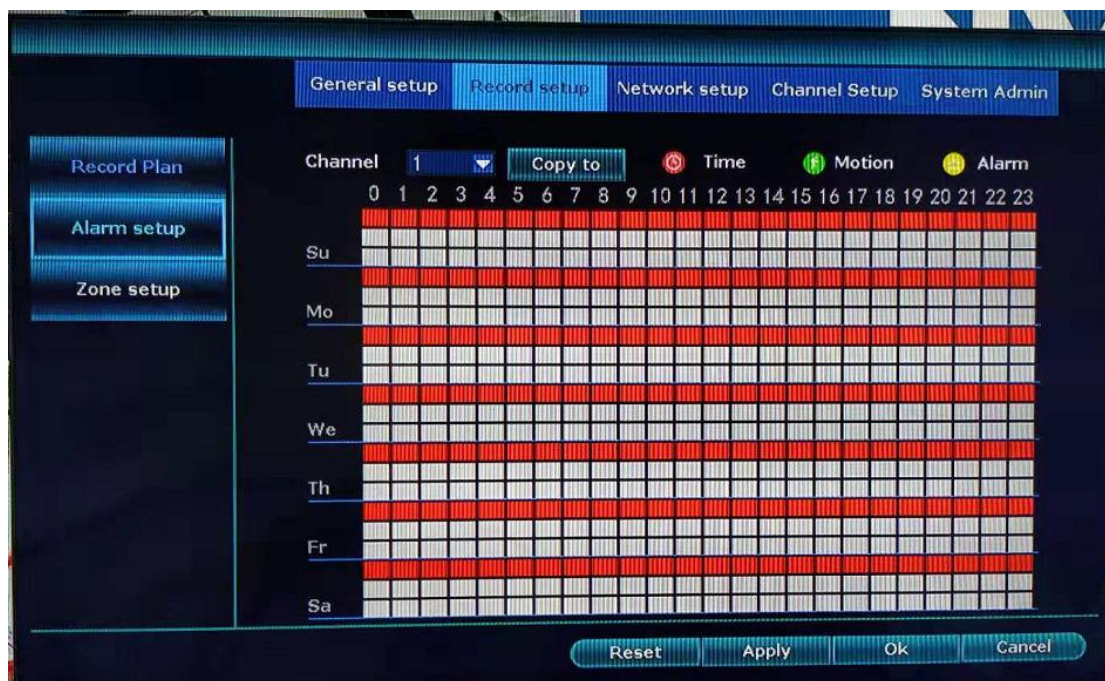

B,Screen resolution setting:

System Settings—General Settings—Screen Settings. (The default resolution is 1280*1024. If you are connected to a 1080P HD display, you can modify the resolution to 1080P, and the monitor screen will be clearer; if you are not sure if your monitor resolution is 1080P, please do not modify it.)

C,Video settings:

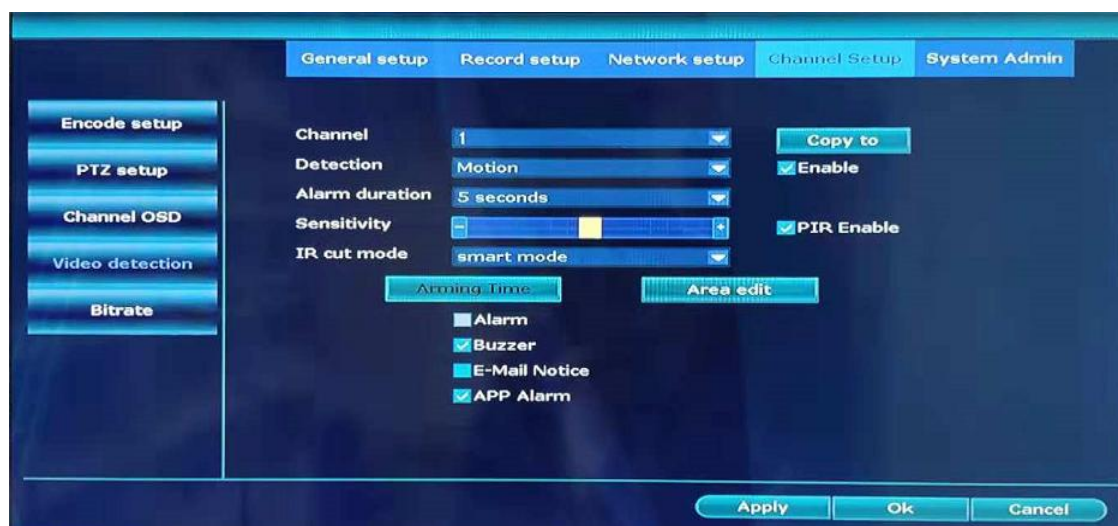

System Settings - Recording Settings - Recording Plan. Red stands for timer recording; green stands for motion detection recording; (only timer recording is enabled by default. You can choose to enable motion detection recording. This makes it easier to find key video clips during playback.)

D,PIR function settings:

System Settings - Channel Settings - Video Detection.

Remark: A camera with a PIR function needs to be ticked after the PIR is turned on, and a normal camera needs to be turned off. (Firstly, look at which channel the camera is equipped with PIR, and which channel camera does not have PIR. Then select the corresponding channel to see if it needs to be checked.)
