

A large green metal cattle tub stands in a grassy field. The tub has a spiral top rail and a solid lower panel. The background shows a sunset sky with soft clouds and a cow grazing in the distance.

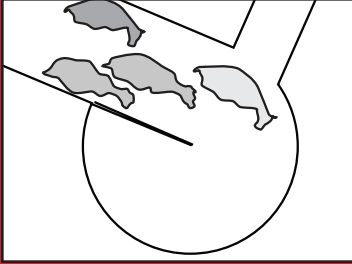

BUDFLOW[®]

CATTLE TUB

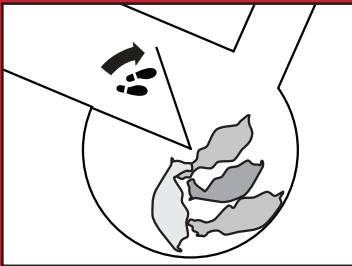

ARROWQUIP

HOW THE BUDFLOW® WORKS:

Cattle enter into the BudFlow® system.

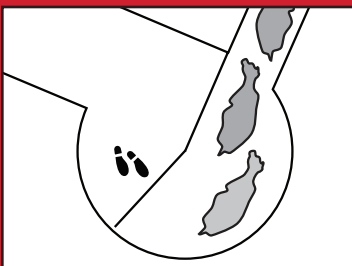

Cattle naturally turn back to where they entered from.

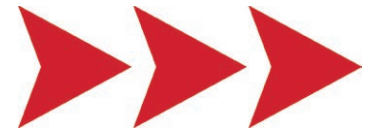

When turning back, they see the open access to the alley.

Cattle move easily into the alley with no force.

Handle more cattle in less time,
reducing cost of labor.

BUDFLOW®

CATTLE PSYCHOLOGY USED TO YOUR ADVANTAGE

PRODUCT CODE: BF34-8 (8' RADIUS) / BF34-10 (10' RADIUS)

The BudFlow® cattle tub uses low-stress handling techniques, utilizing the cattle's natural behavior to create efficient flow. By using cattle psychology to the advantage of the handler, it will reduce stress and increase flow. If the animal hesitates, the crowd gate can be used to assist the animal in the correct direction. By employing the bud box principle in conjunction with a crowding tub, the BudFlow® cattle tub offers the 'best of both worlds'!

SPECIFICATIONS

- Heavy-duty panel clips – easily integrates into existing alleys and cattle squeeze chutes.
- 53" sheeted panels to assist flow and allow the operator to utilize point of balance handling techniques.
- Heavy-duty tubular construction.
