## Vitamin, Mineral and Digestive Aide Supplement for Horses

### **Satisfied users say:**

*"...the condition and bloom on all the animals is amazing."*

*Lori Mangan  
Conway Arabians  
Chatfield, Minnesota*

*"...my horses look better and feel great!"*

*Shelley Gish  
Hallsville, Texas*

*"...unbelievable change in [Lonesome's] hair coat, mane and tail. He also feels better than he has in months."*

*Rick Reeves  
Hallsville, Texas*

**Directions:** Feed 1 oz daily per 100 lbs (cwt) of body weight (i.e., 10 oz for a 1,000 lb horse). One full cup of the included scoop weights 5 oz. Feeding may be increased 50% (1.5 oz/cwt) to improve initial intake. Do not exceed 4 lbs/hd in one day.

**Ingredients:** Fermented grain blend (wheat, wheat middlings, oats, barley malt and flax) as a media for saccharomyces cerevisiae yeast culture (ProBiotein), distillers dried grains with solubles, salt, milled flax, ethyl alcohol, calcium sulfate, monocalcium phosphate, magnesium oxide, potassium chloride, proteinated complexes of copper, zinc & manganese, zinc sulfate, copper sulfate, manganese sulfate, cobalt carbonate, sodium selenite, aspergillus oryzae extract, Vitamin A acetate, Vitamin D3 supplement, Vitamin E supplement, d-BIOTIN.

## What it is \* How to Feed it \* What to Expect

### **I. Vitamin Mineral and Digestive Aide Supplement**

- A. Digestive Aide - See “How it Works” for the explanation of yeast, enzymes and oligosaccharides (prebiotics to feed probiotic bacteria);
- B. Vitamin & Mineral Supplement including Biotin with high quality “organic complexes” for maximum absorption;
- C. Provides horses better nutritional tools to stay healthy.

### **II. Feeding EQUIPRIDE**

- A. Okay to start without changing anything...just add to the daily feed;
- B. Top dress on the grain or just plain (direct);
- C. Back out other supplements

*Scoops of EQUIPRIDE per day*

*25# EQUIPRIDE pail will last about*

For a “hard keeper,” stressed, colicing or sick horse use 3 scoops per day (i.e., 1.5 oz/cwt of body weight).

25 days

For maintenance or continuing a stressed horse after it has shown marked improvement (i.e., 1 oz/cwt of body weight).

40 days

### **III. What to Expect**

- A. Improved digestion of entire ration;
- B. Less forage needed (up to 25% less) because of more complete digestion;
- C. Improvement in condition (often times in a week, typically within a month):
  - Hair coat shiny;
  - Hooves and joints;
  - Health (fewer problems associated with poor digestion, i.e., sand colic, etc.);
  - Eyes (bright and clear);
  - Maintain endurance without getting “Hot” or “High”;
  - “Hard-Keepers” gain weight;
  - And much more!
