

Preface

This the twelfth in the series of SCOPE reports was prepared as one of the seven 'mid-term projects' under the guidance of the SCOPE Steering Committee chaired by Professor G. F. White. The work was planned and directed by a Preparatory Committee with the members:

Ph. Bourdeau, Belgium
G. C. Butler, Canada, Convener
A. G. Johnels, Sweden
F. Korte, West Germany
N. Nelson, U.S.A.
T. A. Tashev, Bulgaria
R. Truhaut, France

During the preparation two workshops were held, in Brussels in July, 1976, and in Neuherberg in December, 1976. Each of these was attended by the Preparatory Committee, the authors of chapters, and a number of observers. The workshops were financed by the European Economic Community, the Deutsche Forschungsgemeinschaft, the Gesellschaft für Strahlen- und Umweltforschung, and the Holcomb Research Institute. The preparation of the manuscript and final editorial meetings were financed by a grant from the Rockefeller Foundation.

The editor received valuable assistance from several members of the Division of Biological Sciences of the National Research Council of Canada, in particular Dr. D. R. Miller and Miss J. E. Marks. Miss E. Monson completed the manuscript.

G. C. BUTLER
