

List of Tables

2.1	Lifetimes of organophosphocompounds in aqueous solution	17
2.2	Rate constants for the reactions of ozone with olefins	19
2.3	Rate constants for the reactions of oxygen [$O(^3P)$] with olefins	20
2.4	Photodegradation of photodieldrin	28
2.5	Results of ultraviolet irradiation of aromatic xenobiotics as solids in an oxygen stream	29
2.6	Results of ultraviolet irradiation of aromatic xenobiotics adsorbed on silica gel	31
3.1	Residues of environmental chemicals and metabolites in tissues and organs of rats after long-term feeding was discontinued	42
3.2	Radioactive material excreted within 10 days after single oral administration of 0.5 mg/kg dieldrin- ^{14}C	50
3.3	Material balance in plants and soil five years after application of aldrin- ^{14}C to soil	53
3.4	Residues of aldrin- ^{14}C and conversion products in soil five years after treatment	54
3.5	Concentration of elements from sea water by plankton and brown algae	58
3.6	DDT concentrations in samples collected from the pond, following a single addition of 1 $\mu g/l$	60
3.7	Behaviour of aldrin- ^{14}C and di-2-ethylhexyl phthalate (DEHP) in a model ecosystem	61
4.1	Coefficients for the mercury transport model	83
5.1	Fraction of inhaled material absorbed	95
6.1	Expected per cent responding for various models over a range of dose levels	125
6.2	Expected per cent responding at low doses for models describing observed responses in the 5%–95% range equally well	125
6.3	Example of log-logistic model applied to quantal response data. Toxicity of rotenone	130
6.4	Example of log-logistic model applied to heterogeneous quantal data. Incidence of hepatomas in rainbow trout fed diets containing aflatoxin for 12 months	132
6.5	Maximum-likelihood iterative computation for rotenone toxicity example	147
8.1	Amounts of dieldrin in the blood, liver, and fat of rats fed on a diet containing 50 ppm dieldrin	177

8.2	The minimal percentage activity of seven acetylcholinesterase isozymes in the housefly after exposure to the LD ₅₀ dose of four insecticides . . .	178
11.1	Chemical states of copper in natural waters	243
12.1	Size classes of plankton	258
12.2	Metabolic properties that can be used to characterize ecosystems . . .	259
12.3	EC ₅₀ values for growth and photosynthesis by four genera of marine unicellular algae when exposed to Hill reaction inhibitors (ametryne, atrazine, and diuron) and non-Hill reaction inhibitors (silvex, diquat, and trifluralin)	261
12.4	Rates of phytoplankton production in oligotrophic and eutrophic lakes .	262
12.5	Total primary productivity of phytoplankton per year in Lake Tahoe .	262
12.6	Calculated and observed values of <i>E</i> (expected population density of algae as a percentage of the control) for three genera of marine unicellular algae exposed to nickel (as NiCl ₂) and the technical acid of 2,4-D	265
13.1	Chemical contaminants found in aquatic environments	277
14.1	Estimated incidence of, and mortality from, skin cancers from steady-state release of selected chemicals	302
