Foreword . . . . .	v
<i>G. F. White</i>	
List of Figures . . . . .	ix
List of Tables . . . . .	xv
Preface . . . . .	xvii

### SECTION 1

Introduction and Aims of the Workshop . . . . .	3
The Three Important Processes Involved . . . . .	5
1 Mobilization . . . . .	5
2 Long Range Transport . . . . .	8
3 Deposition . . . . .	13
Conclusions . . . . .	17
References . . . . .	19
Participants in the Workshop . . . . .	21

### SECTION 2. PAPERS PRESENTED AT THE WORKSHOP

#### (a) General Description and Ecology

Chapter 1 Review of the North African Climate with Particular Emphasis on the Production of Eolian Dust in the Sahel Zone and in the Sahara . . . . .	27
<i>J. Dubief</i>	
Chapter 2 The Importance of Mineral Dust as an Atmospheric Constituent . . . . .	49
<i>C. Junge</i>	
Chapter 3 Ecology and Dust Transport . . . . .	61
<i>B. Lundholm</i>	

#### (b) Mobilization

Chapter 4 Environmental Factors Affecting Dust Emission by Wind Erosion . . . . .	71
<i>D. A. Gillette</i>	

## (c) Transport

Chapter 5	The African Dust Plume: Its Characteristics and Propagation Across West Africa in Winter . . . . .	95
	<i>A. E. Kalu</i>	
Chapter 6	The Use of Meteorological Observations for Studies of the Mobilization, Transport, and Deposition of Saharan Soil Dust . . . . .	119
	<i>C. Morales</i>	
Chapter 7	The Tropospheric Circulation Over Africa and its Relation to the Global Tropospheric Circulation . . . . .	133
	<i>R. E. Newell and J. W. Kidson</i>	
Chapter 8	Monitoring Saharan Aerosol Transport by Means of Atmospheric Turbidity Measurements . . . . .	171
	<i>J. M. Prospero, D. L. Savoie, T. N. Carlson, and R. T. Nees</i>	
Chapter 9	East Mediterranean Trajectories of Dust-carrying Storms from the Sahara and Sinai . . . . .	187
	<i>D. H. Yaalon and E. Ganor</i>	
(d) Monitoring and Deposition		
Chapter 10	Saharan Dust Sedimentation in the Western Mediterranean Sea . . . . .	197
	<i>K. G. Eriksson</i>	
Chapter 11	The Use of Moss-bags in Aerosol Monitoring . . . . .	211
	<i>G. T. Goodman, M. J. Inskip, S. Smith, G. D. R. Parry, and M. A. S. Burton</i>	
Chapter 12	Monitoring and Critical Review of the Estimated Source Strength of Mineral Dust from the Sahara . . . . .	233
	<i>R. Jaenicke</i>	
Chapter 13	Long-range Impact of Desert Aerosol on Atmospheric Chemistry: Two Examples . . . . .	243
	<i>K. A. Rahn, R. D. Borys, G. E. Shaw, L. Schütz, and R. Jaenicke</i>	
Chapter 14	Sahara Dust Transport Over the North Atlantic Ocean – Model Calculations and Measurements . . . . .	267
	<i>L. Schütz</i>	
Chapter 15	A Possible Method for the Sampling of Saharan Dust . . . . .	279
	<i>B. Steen</i>	
Chapter 16	Techniques for Measuring Dry Deposition. Summary of WMO Expert Meeting on Dry Deposition, April 18-22, 1977, Gothenburg . . . . .	287
	<i>B. Steen</i>	
Index	. . . . .	291

## *List of Figures*

1.1	Winds in January . . . . .	30
1.2	Winds in August . . . . .	30
1.3	Predominant Wind Directions and Mean Wind Speeds in Upper Levels at 0° Longitude in January . . . . .	31
1.4	Predominant Wind Directions and Mean Wind Speeds at Upper Levels at the African Atlantic Coast in January . . . . .	32
1.5	Predominant Wind Directions and Mean Wind Speeds in Upper Levels at 0° Longitude in July . . . . .	33
1.6	Predominant Wind Directions and Mean Wind Speeds in Upper Levels at the African Atlantic Coast in July . . . . .	34
1.7	(a) Mean Wind Speed at an Altitude of 10,000 m at the Station Tamanrasset (b) Mean Wind Direction at the Station Tamanrasset . . . . .	35
1.8	Cirrus Clouds above Dry Haze at 8000 m between Douala and Njamena . . . . .	37
1.9	Position of the ITF at Surface at the Longitude 5°W during 1973 . . . . .	38
1.10	The Tops of Cumuliform Clouds emerging from a Layer of Dense Dry Haze . . . . .	39
1.11	Windforce Frequency at Different Wind Directions . . . . .	39
1.12	Yearly Variations of Predominant Wind Sectors. . . . .	40
1.13	Trajectories of Sudano-Saharan Depressions and Limits of the Polar Front and Monsoon Rains . . . . .	43
1.14	Sand- and Duststorm over Western Sahara . . . . .	45
1.15	Migration of the Front of Dust Haze above West Africa from the 2nd to the 8th March 1973 . . . . .	46
2.1	Survey of the Concentration Ranges of Mineral Dust in the Troposphere . . . . .	51
2.2	Distribution of Loess on Earth as well as Desert Areas with Sand Dunes . . . . .	53
2.3	Particle Size Distributions of Different Kinds of Loess as well as Recent Eolian Dust . . . . .	54
2.4	Comparison of Different Idealized Mass Distributions . . . . .	55
2.5	Sand Fractionation Processes by Wind, Schematic . . . . .	56
2.6	Distribution of Loess in Central Europe . . . . .	57
3.1	. . . . .	62
3.2	. . . . .	63
3.3	Dust Transport over the Atlantic . . . . .	65
3.4	Dustfall over the Atlantic . . . . .	65
3.5	Phytoplankton Production . . . . .	66

3.6	Emissions in a Watershed . . . . .	67
3.7	Emissions in an Airshed . . . . .	68
4.1	Threshold Friction Velocity vs. Monodisperse Particle Size . . . . .	72
4.2	Ratio of Threshold Velocity with Nonerodible Elements Present to That with None Present. . . . .	73
4.3	Size Distributions of Soil Particles eroded from Two Soils . . . . .	76
4.4	Size Distribution of Soil Wind Erosion Particles Carried a Great Distance . . . . .	78
4.5	Sedimentation Velocity $V_{sed}$ Compared to Vertical Velocity Fluctuation $w'$ . . . . .	79
4.6	Textures of Sampled Soils . . . . .	84
4.7	Index of Refraction for Saharan Aerosols over the Atlantic . . . . .	91
5.1	Saharan Dust Trajectories across West Africa. . . . .	96
5.2	Typical Midwinter Streamlines . . . . .	99
5.3	Sand-flow in the Sahara 1925-60 . . . . .	100
5.4	An Intrusion of an Upper Level Trough (200 mb, 9th February 1974) .	101
5.5	Pressure Surge Indicated by Isobaric High Centre . . . . .	102
5.6	Low-level 'Jet' 900 m on 31st January 1975 . . . . .	103
5.7	The Emission Phase of Dust Plume on 9th February 1974 . . . . .	103
5.8	Low-level Anticyclone with Pronounced Cyclonic Shear at its Eastern Periphery on 11th February 1974 (850 mb) . . . . .	104
5.9	Path of a Typical Outbreak of Dust Haze in the Western Sahara . . .	105
5.10	A Schematic Hypothetical Model of a Dust Column . . . . .	106
5.11	The Mean Velocity Profile over Faya Largeau . . . . .	107
5.12	Visibility Distribution. Surface 0900 GMT, 11th February 1974 . . .	107
5.13	ATS III Tracks a Dust Cloud from Africa to the Caribbean . . . . .	108
5.14	Propagation of Dusty Atmosphere . . . . .	110
5.15	The Diurnal Frequency of Occurrence of Harmattan Dust Storm . . .	111
5.16	Dust Tongues and Dust Streaks covering the Western Sahara . . . .	112
5.17	Typical Midsummer Streamlines . . . . .	116
6.1	The Network of Meteorological SYNOP Stations in the Sudan Area .	122
6.2	. . . . .	123
6.3	. . . . .	123
6.4	Weather Charts Based on SYNOP Observations for the Observation Time 15th March, 1974, 00 <sup>h</sup> GMT . . . . .	125
6.5	As Figure 6.4, for Observation Time 16th March, 1974, 00 <sup>h</sup> GMT . .	126
6.6	As Figure 6.4, for Observation Time 17th March, 1974, 00 <sup>h</sup> GMT . .	127
6.7	As Figure 6.4, for Observation Time 18th March, 1974, 12 <sup>h</sup> GMT . .	128
6.8	Diagram Showing the Variations in Wind, Weather, Visibilty, Temperature, Dewpoint, and Pressure in Khartoum from 14th to 18th March 1974 . . . . .	129
6.9	The Three Sets of Curves Give the Frequencies of Present Weather .	130

7.1	Zonally Averaged Mass Flux December–February . . . . .	135
7.2	Zonally Averaged Mass Flux June–August . . . . .	136
7.3	Distribution of Stations Used in the Upper Air Analyses . . . . .	138
7.4	Monthly Mean Wind Component $\bar{U}$ at 850 mb for January, April, July, and October . . . . .	140
7.5	Monthly Mean Wind Component $\bar{U}$ at 200 mb for January, April, July, and October . . . . .	142
7.6	Monthly Mean Wind Component $\bar{V}$ at 850 mb for January, April, July, and October . . . . .	144
7.7	Monthly Mean Wind Component $\bar{V}$ at 200 mb for January, April, July, and October . . . . .	146
7.8	Zonal and Meridional Wind Components for $0^\circ$ Longitude . . . . .	148
7.9	Zonal and Meridional Wind Components for $20^\circ\text{E}$ Longitude . . . . .	149
7.10	Zonal and Meridional Wind Components for Equatorial Plane . . . . .	150
7.11	Time Latitude Sections of Mean Zonal Wind at the 850 mb Level at $0^\circ$ , $20^\circ\text{E}$ , and $40^\circ\text{E}$ Longitude . . . . .	151
7.12	Time Latitude Sections of Mean Zonal Wind at the 200 mb Level at $0^\circ$ and $40^\circ\text{E}$ Longitude . . . . .	152
7.13	Time Latitude Sections of Mean Meridional Wind at the 850 mb Level at $0^\circ$ , $20^\circ\text{E}$ , and $40^\circ\text{E}$ Longitude . . . . .	153
7.14	Time Latitude Sections of Mean Meridional Wind at the 200 mb Level at $0^\circ$ and $40^\circ\text{E}$ . . . . .	154
7.15	Kinetic Energy of the Mean Wind at 850 mb January and July . . . . .	155
7.16	Frequency of Haze over the Oceans . . . . .	156
7.17	Specific Humidity at 1000 mb for January and July . . . . .	157
7.18	Streamlines of the Vertically Integrated Moisture Flux . . . . .	158
7.19	Monthly Rainfall vs. Latitude at $0^\circ$ , $20^\circ\text{E}$ , and $40^\circ\text{E}$ . . . . .	160
7.20	Streamlines of the August Circulation at 850 mb and 200 mb for Wet and Dry Years . . . . .	162
7.21	Zonal and Meridional Wind Components in the Equatorial Plane for August 1959 (wet) at Top and August 1973 (dry) . . . . .	164
7.22	Latitude of the Centre of Gravity of African Rainbelt from 1951 to 1973 . . . . .	165
7.23	Specific Humidity for August 1959 (wet) and August 1973 (dry) at $20^\circ\text{E}$ Longitude . . . . .	164
7.24	Weighted Empirical Orthogonal Function Pattern for 850 mb . . . . .	166
7.25	Weighted Empirical Orthogonal Function Pattern for 200 mb . . . . .	167
8.1	Volz Turbidity, Arithmetic Mean Values ( $\times 10^3$ ) for GATE . . . . .	178
8.2	Alpha, Arithmetic Mean Values ( $\times 10^3$ ) for GATE . . . . .	179
8.3	Daily Values of Mineral Aerosol Concentration . . . . .	181
8.4	Volz Turbidity vs. Mineral Aerosol Concentration . . . . .	182
8.5	Mineral Aerosol Concentration, Geometric Mean Values for GATE . . . . .	183

8.6	Alpha vs. Mineral Aerosol Concentration, Miami . . . . .	185
9.1	Dust Concentration at Various Heights during Two Dust Storms in 1972 in the Coastal Plain of Israel . . . . .	188
9.2	Cumulative Grain Size Curves for Dust Collected During the Storm of April 19, 1973 . . . . .	188
9.3	Frequency of Wind Directions During Duststorm Days in Jerusalem, 1957-71 . . . . .	190
9.4	Particle Trajectories for Selected Regional Dust Storms . . . . .	191
9.5	Areal Extent of the March 21, 1967 Dust Storm . . . . .	192
10.1	Western Mediterranean Sea and the Location of Core No. 210 . . . . .	198
10.2	Numbers of Sand Storms in the Sahara and of Dust Falls in Europe in 1936 . . . . .	199
10.3	Microstratified Wind-borne Material in Core No. 210 . . . . .	201
10.4	Cumulative Curves of Sediments from Core No. 210 . . . . .	202
10.5	Plant Fragment which occurs with 'Coaly Rods' . . . . .	203
10.6	Stratigraphy and Approximative Chronology of the Most Conspicuous Beds of Wind-borne Material in Core No. 210 . . . . .	206
10.7	Diagram of the Grain Size and Carbonate Content Distribution . . . . .	208
11.1	(a) Lead and (b) Nickel Deposition onto Sphagnum Moss-bags Exposed During April 1971 . . . . .	215
11.2	(a) Lead and (b) Nickel Deposition onto Sphagnum Moss-bags Exposed During December 1971 . . . . .	217
11.3	Weekly Deposition of Fe, Mn, Zn, and Pb as measured by Moss-bag and Grass Sward at Port Talbot . . . . .	225
12.1	Linke's Turbidity Factor for Two Wavelengths at Sal . . . . .	235
12.2	Estimate of Dust Transport over the North Atlantic Ocean from the Sahara . . . . .	236
12.3	Estimate of Ocean Sedimentation Rates Due to Eolian Dry Deposition . . . . .	237
12.4	Turbidity Data from the Cape Verde Islands . . . . .	238
12.5	Isolines of Linke's Turbidity Factor . . . . .	239
13.1	Geometric Mean Enrichment Factors . . . . .	245
13.2	Enrichment Factor Diagram (Na) . . . . .	246
13.3	Enrichment Factor Diagram (Fe) . . . . .	247
13.4	'Meteor' 1973 Cruise Map . . . . .	248
13.5	Major Components of the Sahara Trade-wind Aerosol . . . . .	250
13.6	Coefficient of Variation vs. Analytical Uncertainty of X/Fe . . . . .	250
13.7	Enrichment Factors of the Sahara Aerosol . . . . .	251
13.8	Concentration and Enrichment Factors of V and Al in Aerosol over Barrow (Spring 1976) . . . . .	254
13.9	Elemental Enrichment Factors in Arctic Haze and Remote Northern Continental Aerosol . . . . .	255

13.10	Electron Photomicrograph of Prehaze Aerosol over Barrow (Spring 1976)	256
13.11	Electron Photomicrograph of Arctic Haze Aerosol over Barrow (Spring 1976)	257
13.12	Typical 700-mb Contour Map for Arctic Haze Transport to Alaska	258
13.13	700-mb Isobaric Trajectories of Air to Barrow	259
13.14	Mass Distribution for Parent Soil and Derived Aerosol, Sahara Desert	260
13.15	Volume Distribution for Arctic Haze Aerosol of Flight KL (Spring 1976)	261
13.16	Scatter Diagram of Si and Al Concentration in Aerosols	262
13.17	Enrichment Factors of Th and Cr vs. Percentage of Soil Mass	263
13.18	Enrichment Factors of Various Elements vs. Percentage of Soil Mass	264
13.19	Extrapolation of Sahara Soil Enrichment Factors to Sahara Aerosol	264
14.1	Comparison between Mean Annual Frequency of Sandstorms	269
14.2	Vertical Distributions of Mineral Dust for Selected Transport Distances from the Source	271
14.3	Volume Concentration Ratios at Sea Level for Different Particle Size Ranges as a Function of the Distance from the Source	272
14.4	Mineral Mass Concentrations at Sea Level as a Function of the Transport Distance from the Sahara	274
14.5	Mineral Volume Distributions at Sea Level for Various Distances from the Sahara	275
15.1	Sketch of Particle Sampler	280
15.2	Cross-section of Sampler	281
15.3	Battery Current-Voltage Characteristics for High Voltage Supply Working on Sampler	282

## List of Tables

2.1	Global Estimates of the Major Natural Aerosol Sources in the Troposphere in $10^6$ tons $\text{yr}^{-1}$ . . . . .	50
2.2	Estimates of the Global Tropospheric Dust Cycle . . . . .	52
2.3	Comparison of Various Transport Rates of Saharan Material Across The Western Coastline . . . . .	54
4.1	Descriptions of Wind Erodibility Groups (WEG) . . . . .	81
4.2	Soil Erodibility Index Based on Percentage of Soil Fractions Greater than 0.84 mm in Diameter as Determined by Dry Sieving . . . . .	83
4.3	Soil Parameters . . . . .	87
6.1	Data on Airborne Dust . . . . .	121
8.1	Mean Atmospheric Turbidity Parameters for the North Atlantic During GATE (All Stations: Summer, 1974) . . . . .	174
8.2	Atmospheric Turbidity Parameters for the North Atlantic During Each Phase of GATE (Land Stations: Summer, 1974) . . . . .	177
8.3	Mineral Aerosol Concentrations for the Equatorial North Atlantic During GATE . . . . .	184
9.1	Estimates of Suspended and Deposited Dust Quantities During Selected Dust Storms in the Eastern Mediterranean Basin . . . . .	189
11.1	Summary of Significance Levels of Correlation Coefficients ( $r$ ) Between Various Gauge Pairs for all Seven Metals and All Sites and Months . . . . .	222
11.2	Geometric Means of Regression Coefficients for Metal Content of Various Gauge Pairs . . . . .	223
11.3	Regression Coefficients for Metal Content of Various Gauge Pairs . . . . .	224
11.4	Summary of Statistically Significant Correlations ( $r$ ) between Monthly Wind-miles from Stated Compass Bearing and Monthly Metal Content of Gauges at Port Talbot . . . . .	227
11.5	Summary of Statistically Significant Correlations ( $r$ ) between Monthly Wind Miles from Stated Compass Bearing and Monthly Metal Content of Gauges at Penmaen . . . . .	228
11.6	Observed Monthly Weights ( $\mu\text{g}$ ) of 'Dust' in TD Gauge Compared with Estimates Based on Content of Various Metals Respectively on Moss-bags . . . . .	229
13.1	Classification of Elements by Type of Enrichment-factor Diagram . . . . .	247
13.2	Enrichment Factors in the Sahara and World Aerosols . . . . .	252

15.1	Ratio of Flow Velocity Between Sample at Nozzle Inlet and Main Flow . . . . .	283
15.2	Collection Efficiency of Sampler for Different Particle Size Classes at Different Battery Currents . . . . .	283
15.3	Influence of Electrode Deposits on Collection Efficiency . . . . .	284
15.4	Collection Efficiency Obtained from Measurements of Different Types of Particles . . . . .	285
16.1	Summary of Accumulation Techniques for Measuring Dry Deposition of Particles . . . . .	287
