

The Scientific Committee on Problems of the Environment (SCOPE) was established by ICSU in 1969 to: a) advance knowledge of the influence of man and his activities upon his environment, as well as the effects of these alterations upon man, his health and his welfare-with particular attention to those influences and effects which are either global or shared in common by several nations; and b) serve as a non-governmental, interdisciplinary and international council of scientists and as a non-governmental source of advice for the benefit of governments and intergovernmental agencies with respect to environmental problems.
