

Subject Index

- Accessory organs, male, 52, 53
 - function of, 60, 61
 - prostate, 53
 - seminal vesicle, 54
- Algae, 108–115
 - (see also Microorganisms)
- Amniocentesis, tests, 28, 29
- Androgen-binding protein (ABP)
 - assessment, 59
 - role, 50
- Animals, laboratory
 - integrated reproduction studies, 8–14
 - use in tests, 18–25, 33, 36, 37, 57, 59–62, 65, 67, 68, 72
- Annelida, 98, 99
 - oligochaetes, 99
 - polychaetes, 98
- Arthropoda, 99–101
 - Crustacea, 99
 - OECD guidelines, 99
 - Insecta, 99–101
 - (see also Insects)
- Atresia, 34, 36
 - menopause age monitoring, 34
 - oocyte/follicle destruction monitoring, 22, 23
- Birds, 76–80
 - currently used methods, 76–78
 - egg injection experiments, 77, 78
 - multigeneration studies, 77
 - reproductive cycle tests, 76, 77
 - effects of chlorinated hydrocarbons, 4
 - eggshell thinning, pesticide-induced, 75
 - field experiments, 80
 - potential test methods, 78
 - adrenocortical function, 79
 - cytogenetic tests, 78
 - egg exchange experiments, 79, 80
 - hormonal cycle, 79
 - liver enzyme induction, 78
- Chemicals
 - biological conversion to more toxic forms, 6
 - exposure to, 16
 - international bank for, 6
- Chick embryos, use in tests, 25, 26
- Chorionic gonadotropin (hCG), 57
- Clinical evaluation, 27–35, 68–71
 - female reproductive function, 27–33
 - male fertility, 69
 - minimal requirements, 68–69
 - in vitro* fertilization, 69–71
 - testicular biopsy, 71
- Corpus luteum function, 22, 23
 - methods to assess, 22, 34, 36
- Cnidaria, 97
- Cross-mating or reciprocal studies, 13
- Crustacea, 99
 - OECD guidelines, 99
- Data banks, centralized, 38
- Echinodermata, 102
 - sea urchin gametes test, 102
- Ejaculation, effects on, 55
- Embryo culture methods, 18, 26, 33
- Embryotoxicity
 - chick embryos, 26, 33
 - contentious issues, 14
 - embryonic and fetal loss, 27
 - human, 27
 - rat/mouse embryos, 33
 - selective, 13, 14
- Epidemiological investigations, 15–17, 19, 27–35
 - chemical exposure, 16, 17
 - field studies, 17
 - levels of, 16, 34
 - long-term follow-up, 17

- Epididymis, 50–52, 60
 assessment, 60
 effects on, 50–52, 60
 function, 60
 sperm evaluation, 60
- Erection, effects on, 55
- Exposure, definition of, 15
 chemical, 16, 17
- Farm animals, as indicator species, 33
- Fertility
 assessment, 67, 68
 competitive, 68
 serial mating profile, 67
 tests, 12, 13, 23, 24, 67, 68
- Fertilization
in vitro, 37, 69–71
in vivo, 68
 study techniques, 23–25
- Fetal loss, human, 27
- Field studies, 4, 17, 80, 94, 95, 106, 107
- Fish, 75, 81–85
 acid precipitation, effects on reproduction, 75
 currently used methods, 81, 82
 early-life history tests, 81, 82
 standard life cycle tests, 81
 potential test methods, 82–85
 cytogenetics, 83
 gamete test, 82, 83
 histopathological tests, 83, 84
 hormonal control mechanisms, 84, 85
 inhibition of spawning, 84
 Medaka embryo test, 83
 mutagenicity tests, 84
 spawning behaviour tests, 85
- Follicle stimulating hormone (FSH), 45, 46, 56, 57, 59
 analysis, 56
 effects of, 45–46
 secretion measurement, 59
- Follicle growth, 19, 20
- Folliculogenesis, 17, 18
 disruption, 18
 toxicity to, 18, 19
- Gamete transport, study techniques, 23–25, 35, 37
- Genetic toxicology, 7, 8
- Gonadotrophs, gonadotropes, 45
- Gonadotropin-releasing hormone (GnRH)
 46, 47
- hCG administration *in vivo*, 57
- Heterologous test, 70, 71
- Higher plants, 105–108
 life cycle differences, 105, 106
 multitiered assays, 105, 106
 reproduction, sexual, asexual, 105
 test methods, 105–108
 field tests, 107
 from mature gametes to mature seeds, 107, 108
 from seed germination to reproductive phase, 106, 107
in vitro tests, 105–108
in vivo tests, 106
 lethality tests, 106
 sporogenesis, 107
- Histological analysis, 57–59, 71
 insect gonads, 95
 testicular, 58, 59, 71
- Human
 amniocentesis, 28, 29
 congenital malformations, 29
 embryonic and fetal loss, 27
 health hazard, evaluation, 33
 perinatal deaths, 29
 prenatal studies, 28, 29
 ultrasound, 28
 X-ray radiography, 28
 relationships to other organisms, 3
 semen, emission, 52
 studies, 27–30
 weights, new born and placenta, 29
- Hypothalamic-pituitary-gonadal axis, 45, 46
- Inhibin production, 59
- Insects, 99–101
Aedes aegypti, 100
Dermestes, 101
 Diptera, 100
 gametogenesis, 100
 genetically defined strains, 101
 gonads, 95, 100
 hemipterans, 100
 Lepidoptera, 101
Leucophaea maderae, 101
Musca domestica, 100
Pyrrhocoris apterus, 100

- Rhodnius prolixus*, 100
Spodoptera littoralis, 101
Trogoderma, 101
- Invertebrates, 93–104
- Annelida, 98, 99
 - oligochaetes, 99
 - polychaetes, 98
 - Arthropoda, 99–101
 - Crustacea, 99
 - OECD (1981) guidelines, 99
 - insects, 99, 101
 - Aschelminthes, 97
 - Cnidaria, 97
 - rapid, cost-effective assays, 103
 - role in ecosystems, 103
 - standard assays, priority, 103
 - test species, essential characteristics, 94
 - Echinodermata, 102
 - ecosystem, critical role in, 93
 - field studies, 94, 95
 - histological assessments, 95
 - laboratory studies, 95–102
 - Mollusca, 101, 102
 - Platyhelminthes, 97
 - reproduction defined, 93
 - taxa, major, 97–103
- Implantation techniques, 23–25, 37
- International bank for reference chemicals, 6
- International interlaboratory comparison, 6
- International Programme on Chemical Safety, 6
- Interstitial, 47
- In vitro* tests and evaluations, 8, 18, 23–25, 30, 33, 37, 57, 65, 68, 69–71
- In vivo* tests and evaluations, 8, 18–25, 33, 37, 57, 59–62, 65, 67, 68, 72
- Lactation, 31, 32, 35, 37
- Leydig cells, 47, 52, 54, 57
 - assessment, 57
 - function, 47, 52, 54, 57
- Luteinizing hormone (LH), 45–47, 56
 - analysis, 56
 - effect of, 45–47
 - levels, in serum, 56, 57
- Luteinizing-hormone-releasing hormone (LHRH) test, 46
- Mammals, 7–74
 - reproductive function of females, 7–44
 - reproductive function of males, 45–74
 - endocrinological evaluation, 56, 57
 - structure and physiology, 45–55
- Maternal behaviour, effects on, 32, 33
- Microorganisms (including algae), 108–115
 - catabolic enzyme tests, 109
 - chemical/organism interaction, 114
 - choice of organisms, primary requirements, 110
 - effects of chemicals on reproductive function, 109
 - effects of chemicals on vegetative reproduction, 113
 - estimation of population number or density, 113
 - biomass determination, 113
 - carbon dioxide fixation, 113
 - dilution and recovery methods, 113
 - dry weight determination, 113
 - oxygen consumption (BOD), 113
 - total cell number, 113
 - turbidity or absorbance, 113
 - growth media, 110
 - growth systems, 111–113
 - cage (dialysis) culture, 112
 - closed (batch) culture, 111, 112
 - continuous-flow culture, 112
 - liquid media, 111, 112
 - solidified media, 111
 - agar plate-well bioassay, 111
 - Petri-dish technique, 111
 - viable cell counts, 111
 - life cycles with sexual reproductive stages, 108
 - methods of growth, 110
 - microbial growth assessment, 113
 - variables for number or density estimation, 113
 - nutritional and metabolic types, 108
 - reproduction by division, 108
 - reproductive function, defined, 108
 - testing for effects on reproduction, 109
 - tests for specific cellular targets, 109
 - vegetative life cycles, 108
- Mollusca, 101, 102
 - Biomphalaria glabrata*, 102
 - Lymnaea stagnalis*, 102
 - Mytilus edulis*, 101
 - index of reproductive function, 95

- Mollusca (*contd.*)
Physa acuta, 102
 Multigeneration studies, 8–11
 advantages, 10
 birds, 77
 dosing, 10–12
 litters
 culling, 11, 12
 second, 10, 11
 size, 11, 12
 mating, 10–11
 nesting materials, 12
 one, two generations contention, 10, 11
 parental animals, number, 12
 Mussel watch, 101
 Mutagenicity tests, *in vitro*, 8

 Newborn, human, weight, 29
 Non-human targets, 3
 ecological implications, 3
 economic importance, 3

 Oligochaeta, 99
 Oogenesis, 17–23, 34, 36, 37
 assessment of toxicity to, 18, 19
 disruption, 18
 Ovary, 17–23
 developed, toxicity to, 19–23
 developing, toxicity to, 17–19
 serum assays, 19
 ultrasound techniques, 19
 Ovulation, 17–23
 methods to assess, 21–23, 34, 36, 37

 Parturition, 30
 delayed, tests, 30, 31
 lactation, 35, 37
 premature labour, delivery, screening,
 30
 Paternally related birth defects, 55, 56
 Perinatal studies, 14, 15, 29
 Pituitary gland, 45–47
 effects of toxic agents, 46
 regulation, 45–47
 Placenta, human, weight, 29
 Polychaeta, 98
 Postimplantation, 35, 37
 Postnatal studies, 14, 15
 Preimplantation, 23–25, 37
 Prenatal studies, human, 28, 29

 Prostate, human and animal, 52, 53
 malignancies, 52

 Radioimmunoassay (RIA) techniques, 56
 Reciprocal- or cross-mating studies, 13
 Reproduction, integrated studies, 8–15
 single generation, 9, 11, 23, 24
 three-generation, 9, 23, 24
 two-generation, 9, 23, 24
 Reproductive capacity, 7, 8
 assessment, 7
 integrated testing, 8
 Reptiles, 75, 86
 test methods, potential, 86
 test species, selection, 86
 Research and development needs, 5
 algae, 113
 higher plants, 113–115
 invertebrates, 103
 mammals, females, 33–37
 males, 71, 72
 microorganisms, 113–115
 priority areas, 5
 vertebrates other than mammals, 88

 Semen analysis, 61–67
 acrosome reaction, 64, 65
 data interpretation, 66
 fertility thresholds, 65
 foreign chemicals, 65
in vitro tests, 65
in vivo studies, 65
 split-ejaculate method, 64
 Semen emission studies, 52
 Seminal plasma, 52, 60
 constituents, 60
 functions, 52
 Seminal vesicle, 54
 human–animal differences, 54
 secretion, 60, 61, 64
 Seminiferous epithelium, 48, 49, 58, 60
 Seminiferous tubules, 47, 48
 components, role, 47, 48, 50
 examination, 58
 Sertoli cells, 46–50, 57–59
 effect on, 46–50
 function analysis, 59
 structural alterations, 57, 58
 Sexual behaviour and libido, 54, 55

- Sperm
 - abnormalities, 63
 - cervical mucus interaction, 66
 - concentration, 61-67
 - dilution experiments, 65
 - morphology, 63, 64
 - motility, 63, 64
 - viability, 64
- Spermatogenesis, effects on, assessment, 57, 58, 68

- Teratogenicity studies, 7-9, 14
 - tests, *in vitro*, 8
- Tests, general aspects
 - applicability, 5
 - cost-effective, 117
 - development, 6
 - economy, 3
 - in vivo* laboratory tests, 4
 - population investigations, 4
 - major purposes, 117
 - new product approval, 119-121
 - new product screening, 117, 118
 - quantitative, 4
 - regulatory approval of new products, 117, 118
 - safety review of chemicals in use, 117, 118, 121
 - uniformly stringent, 117
 - validation criteria, 118, 119
- Testicular
 - biopsy, 71
 - histology, 58, 59
 - plasma, 50
 - semen, analysis, 59, 60
- Testis function, examination, 47, 61, 68
 - assessment of effects on, 47
- Testosterone, 56, 57
 - analysis, 56
 - levels, 56, 57

- Ultrasound techniques, 19, 20, 28

- Vertebrates other than mammals, 75-92

- X-ray radiography, human prenatal screening, 28

- Zygote transport, 23-25
