Foreword	v
<i>T. F. Malone</i>	
List of Figures	xi
Preface	xiii
List of Participants and Contributors	xv
Chapter 1. Introduction	1
Chapter 2. Environmental Problems	4
2.1 Human Activities and Environmental Problems	4
2.2 Differences in Outlook on Environmental Problems	8
Chapter 3. Simulation Modelling and Systems Analysis	11
Chapter 4. Purposes of Environmental Modelling	15
4.1 Modelling as an Extension of Information Systems	15
4.2 Modelling in Environmental Management and Decision-Making	15
4.3 Modelling as a Research Tool	17
4.4 Modelling for Allocation of Research Resources	17
4.5 Modelling in Education	19
4.6 Modelling in Public Information	20
Chapter 5. The Decision-Maker's Outlook	21
Chapter 6. The Model Builder's Outlook	28
Chapter 7. Environmental Simulation Modelling	31
7.1 The Nature of Simulation Modelling	31
7.2 Classification of Environmental Simulation Models	35
7.3 Approaches to Model Building: The Problem of Complexity	35
Chapter 8. Problem of Modelling for Decision-Making	40
8.1 Problems in Model Building Methodology	40
8.1.1 Data Requirements	40
8.1.2 Scale: Temporal and Spatial	41
8.1.3 Aggregation	41
8.1.4 Interfaces between Sub-Models	42
8.1.5 Validation of Models	42
8.1.6 Transferability of Models	43
8.2 Problems of Providing a Suitable Environment for Model Builders	43

8.3	Problems Arising between Modellers and Classical Scientists	44
8.4	Communication Problems between Disciplines	44
8.5	Communication Problems between Modellers and Decision-Makers	45
8.6	Special Problems of Developing Countries	46
Chapter 9.	Case Studies of Simulation Modelling	48
9.1	The Toronto Air Pollution Simulation Model	48
9.2	The Bedford-Ouse Study	50
9.3	Model of Water Resource Development and Utilization in Israel	52
9.4	Simulation of Mediterranean Coastal Desert Ecosystems	56
9.5	A Stochastic Climate/Food Simulation Model	57
9.6	A Gaming-Simulation for Nutrition Planning	59
Chapter 10.	Recent Experience in Simulation Modelling for Environmental Management in Different Countries	61
10.1	Australia	61
10.2	Egypt	62
10.3	Federal Republic of Germany	63
10.4	Japan	64
10.5	The Soviet Union	65
10.6	The United Kingdom	66
10.7	The United States	67
Chapter 11.	Possible Areas for Improvements	68
11.1	Introduction	68
11.2	Improvements in Simulation Modelling	68
11.2.1	Modelling within a Broader Context	68
11.2.2	Parameter Estimation	70
11.2.3	Treatment of Uncertainty	72
11.2.4	Sensitivity Analysis	73
11.2.5	Validation	74
11.2.6	Computer Software and Hardware	74
11.3	Strategies for Improving Human Interactions	76
11.3.1	Improving the Interfaces between Scientists from Different Disciplines	76
11.3.2	Improving the Interface between Modeller and Decision- Maker	77
Chapter 12.	Priorities for Improvements in Environmental Modelling	80
12.1	Priorities for Improvement in Developed Countries	80
12.2	Priorities for Improvement in Developing Countries	82
Chapter 13.	Recommendations	84
Bibliography	87
Appendix 1. Glossary	91

Appendix 2. Classification of Models, and a Survey of Modelling Experience in Canada	96
Author Index	107
Subject Index	109

List of Figures

3.1	The place of environmental modelling in a broader systems context . . .	13
5.1	Flow of meteorological information	21
7.1	Relationships between the major simulation techniques	33
9.1	Map of the Great Ouse River Authority area	51
9.2	The integrated planning process for Israeli water resources	53
9.3	Long-term forecasts from the dynamic stochastic model of water resources development and allocation in Israel	54
11.1	Phases of applied systems analysis	69
11.2	Flow diagram for the use of predictive models (based on views expressed in SCOPE [1975a])	69
11.3	Alternative model structures compared	77
11.4	Relations between modelling process and decision process	78
