

Pol Leurs

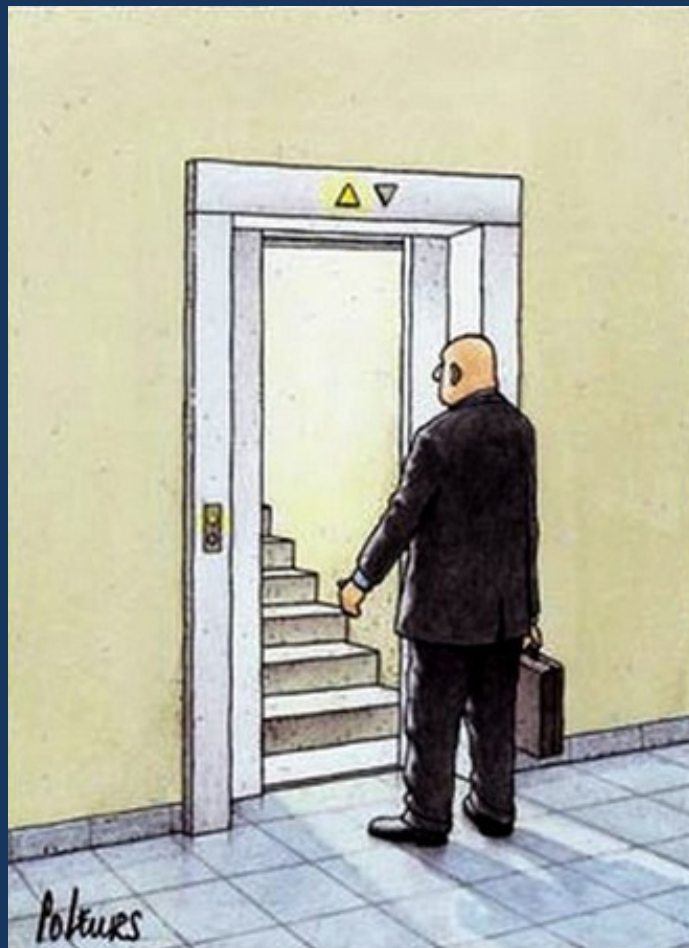

You have to admit, I like the engineers that often puts their art in the middle of rational existence. Of course, the theory of complex numbers show that out of the real, imaginary part there, which is very important. Pol, this romantic engineer, is in the history of caricature, if my license is received, the greatest cartoonist of doors. Doors open, doors closed, blue doors, white doors, doors of the library, prison doors ... Any door is good for Pol when he wants to make us smile. I thought a little while ago, that door has to invent. He found her not to worry. The competition of this year from Kruishoutem, Soil pollution and sanitation theme, found the door of the washing machine...

Other doors, other smiles ...

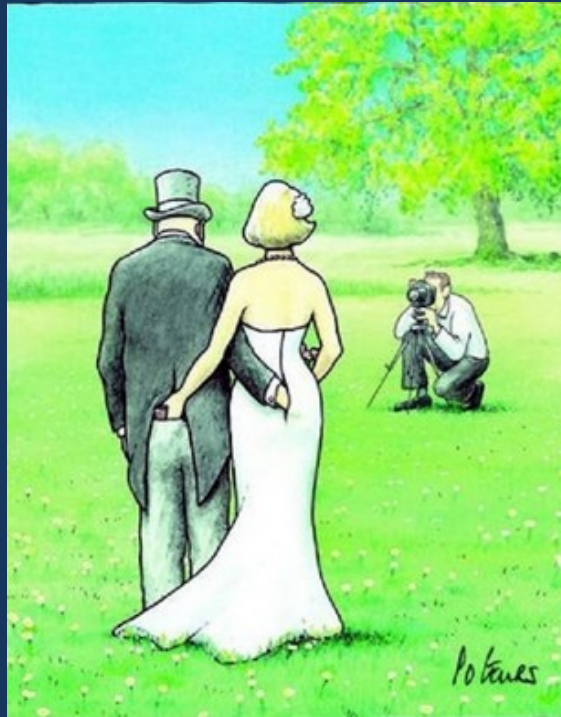

et caetera... et caetera...

It is right, sometimes wrong Pol when he drew nothing but simple door. But the result was still humorous, so we can fully forgive the error ...

Sincerely engineering,

George Licurici
