

Casey Builds It Schema Validator FAQ

Find and fix SEO schema errors quickly with this free tool.

Based on [Free Schema Validator Tool Built With Cursor Ai Find Seo Schema Errors Fast](#) by Casey Builds It

Q: What is the Casey Builds It Schema Validator tool?

A: It's a Python-based GUI tool designed to automate schema auditing across websites. It helps users find and fix structured data errors that can impact SEO.

Q: What kind of schema data can the tool find?

A: The tool can fetch and parse HTML to extract both JSON-LD scripts and inline microdata.

Q: How does the tool validate schema?

A: It uses custom, handwritten validation rules specifically designed to catch common SEO-impacting issues like missing required fields and malformed types, rather than just wrapping Google's API.

Q: Can I check just one page, or does it have to be the whole site?

A: You can use the tool to check a single URL, feed it an entire sitemap to scan all pages, or provide a custom list of URLs for targeted audits.

Q: Is this tool free to use?

A: Yes, the tool is free to use, meaning there's no monthly SaaS subscription required to audit your schema.

Q: What are the benefits of using this tool for SEO?

A: It automates tedious schema auditing, finds errors that can affect search result appearances, and helps prevent issues from slipping through the cracks, especially for large sites or multiple projects.

Q: Can I check my schema against Google's live testing tool?

A: Yes, flagged pages can be sent directly to Google Rich Results for a live, side-by-side test, ensuring your local validation is accurate.

Q: What if I need to track schema fixes over time?

A: The tool allows you to export your findings, making it easier to track progress on fixes or share reports with clients and teammates.

Q: Who is this tool designed for?

A: It's built for SEOs, developers, and agencies who manage multiple websites and need an efficient way to audit structured data.

Q: What makes this tool different from other schema checkers?

A: Unlike many tools that require payment or only check one page at a time, this tool offers a fast, free way to scan an entire site using custom validation rules.

Q: Does the tool only look for JSON-LD?

A: No, the tool fetches and parses HTML to extract both JSON-LD scripts and inline microdata.

Q: Can I use this tool to audit schema for a specific section of my website?

A: Yes, you can provide a custom list of URLs, which is useful for spot-checking specific templates or page types without scanning the entire domain.
