

# Casey Builds It Schema Validator FAQ

Answers to common questions about the free schema validator tool.

Based on [Free Schema Validator Tool Built With Cursor Ai Find Seo Schema Errors Fast](#) by Casey Builds It

---

## Q: What is the Casey Builds It Schema Validator Tool?

**A:** It's a Python-based GUI tool designed to automate schema auditing across websites. It helps users find and fix structured data errors quickly, especially on large sites or for multiple client projects.

## Q: What problems does this tool solve?

**A:** It addresses the tedious nature of checking schema markup manually, either one URL at a time or by digging through page source. It provides a fast, free way to scan an entire site for missing or broken schema.

## Q: Can the tool check just one page?

**A:** Yes, you can drop in a single URL to check the schema on one specific page.

## Q: Can the tool check an entire website?

**A:** Yes, you can feed it an entire sitemap to scrape and validate every page at once, or use a custom list of URLs.

## Q: What types of structured data does the tool find?

**A:** The tool fetches and parses HTML to extract both JSON-LD scripts and inline microdata.

## Q: How does the tool validate schema?

**A:** It uses handwritten validation rules specifically built to catch critical SEO issues like missing required fields and malformed types, rather than just being a wrapper around Google's API.

## Q: Can I test my schema live?

**A:** Yes, flagged pages can be sent directly to Google Rich Results for a live, side-by-side test.

## Q: Is the tool free to use?

**A:** Yes, the tool is free and does not require a paid SaaS subscription.

## Q: Can I save the results?

**A:** Yes, the results can be exported, allowing you to track fixes over time or share reports with clients or teammates.

## Q: Who is this tool designed for?

**A:** It's built for SEOs, developers, and agencies who manage multiple sites and need an efficient way to audit structured data.

## Q: What are the key benefits of using this tool?

**A:** It automates schema audits, extracts multiple data types, uses custom validation rules, links to live testing, and exports results, all without a monthly fee.

**Q: Does the tool only check for errors?**

**A:** The tool flags critical schema issues using custom validation rules designed to catch common mistakes that can hurt SEO.
