

Using the Free Schema Validator Tool

Automate schema auditing and find SEO errors quickly.

Based on [Free Schema Validator Tool Built With Cursor Ai Find Seo Schema Errors Fast](#) by Casey Builds It

Step 1: Access the Tool

The tool is a Python-based GUI application designed to automate schema auditing.

Step 2: Input URLs for Validation

You can input a single URL to check schema on one page, or provide an entire sitemap to scan and validate all pages.

- Alternatively, feed it a custom list of URLs for spot-checking specific templates or page types.

Step 3: Extract Structured Data

The tool fetches HTML and parses it to extract both JSON-LD scripts and inline microdata.

Step 4: Validate Schema with Custom Rules

The extracted schema is run through custom validation rules designed to catch common SEO-impacting issues like missing required fields and malformed types.

Step 5: Perform Live Testing

Flagged pages can be sent directly to Google Rich Results for a live, side-by-side test.

Step 6: Export Results

Results can be exported, allowing you to track fixes over time or share reports with clients or teammates.
