

Casey Builds It Schema Validator FAQ

Find and fix SEO schema errors quickly with this free tool.

Based on [Free Schema Validator Tool Built With Cursor Ai Find Seo Schema Errors Fast](#) by Casey Builds It

Q: What is the Casey Builds It Schema Validator tool?

A: It's a Python-based GUI tool that automates schema auditing for websites. It helps you find and fix structured data errors that can impact your SEO.

Q: What kind of schema data can the tool find?

A: The tool fetches and parses HTML to extract both JSON-LD scripts and inline microdata.

Q: How does the tool validate schema?

A: It uses handwritten validation rules designed to catch critical SEO issues like missing required fields and malformed types, rather than just wrapping Google's API.

Q: Can I check just one page with this tool?

A: Yes, you can drop in a single URL to check the schema on one specific page.

Q: Can the tool check an entire website?

A: Yes, you can feed the tool an entire sitemap to scrape and validate every page at once, or provide a custom list of URLs.

Q: Is this tool free to use?

A: Yes, the tool is free and does not require a paid SaaS subscription.

Q: What are the benefits of using this schema validator?

A: It automates tedious schema auditing, helps catch errors that can affect search result appearance, and saves you from manual checks or monthly subscription fees.

Q: Can I test the flagged schema in Google?

A: Yes, flagged pages can be sent directly to Google Rich Results for a live, side-by-side test.

Q: Can I save the results of the audit?

A: Yes, the results can be exported, allowing you to track fixes over time or share reports with clients or teammates.

Q: Who is this tool designed for?

A: The tool is built for SEOs, developers, and agencies who manage multiple sites and need an efficient way to audit structured data.

Q: What types of schema errors does the tool flag?

A: It flags critical schema issues such as missing required fields, malformed types, and other common mistakes that can negatively impact SEO.

Q: Does the tool only check JSON-LD?

A: No, the tool extracts and validates both JSON-LD scripts and inline microdata found in the HTML.

Q: How does this tool differ from other schema checkers?

A: Unlike many tools that require subscriptions or only check one page, this tool is free, can scan entire sitemaps, and uses custom validation rules for SEO-specific issues.
