

Working with SAON ROADS and Shared Arctic Variables

Hosted by the Arctic Observing Summit
Wednesday, February 15
6:00 AKST / 10:00 EST / 15:00 UTC / 16:00 CET

Please join us for a webinar on the Roadmap for Arctic Observing and Data Systems (ROADS), part of the Sustaining Arctic Observing Networks (SAON) initiative, and the development of Shared Arctic Variables. We will provide brief background on the ROADS process and its guiding principles, and will review the concept of Shared Arctic Variables. Speakers from the projects piloting the process (Arctic PASSION and RNA CoObs) will describe how the process is working in practice and lessons learned for future proposals to support expert panels.

This webinar is particularly aimed at those interested in contributing to better coordination of Arctic observations through collaboration with SAON activities, the ROADS process, and the development of Shared Arctic Variables.
