

The Mobile App for Renewable Energy Installation Teams

The mobile app helps installation teams (incl. installation partners) throughout the full installation cycle from the work order assignment up to the installation sign-off.

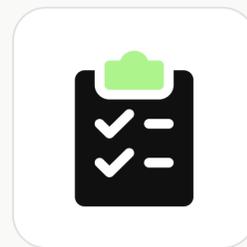

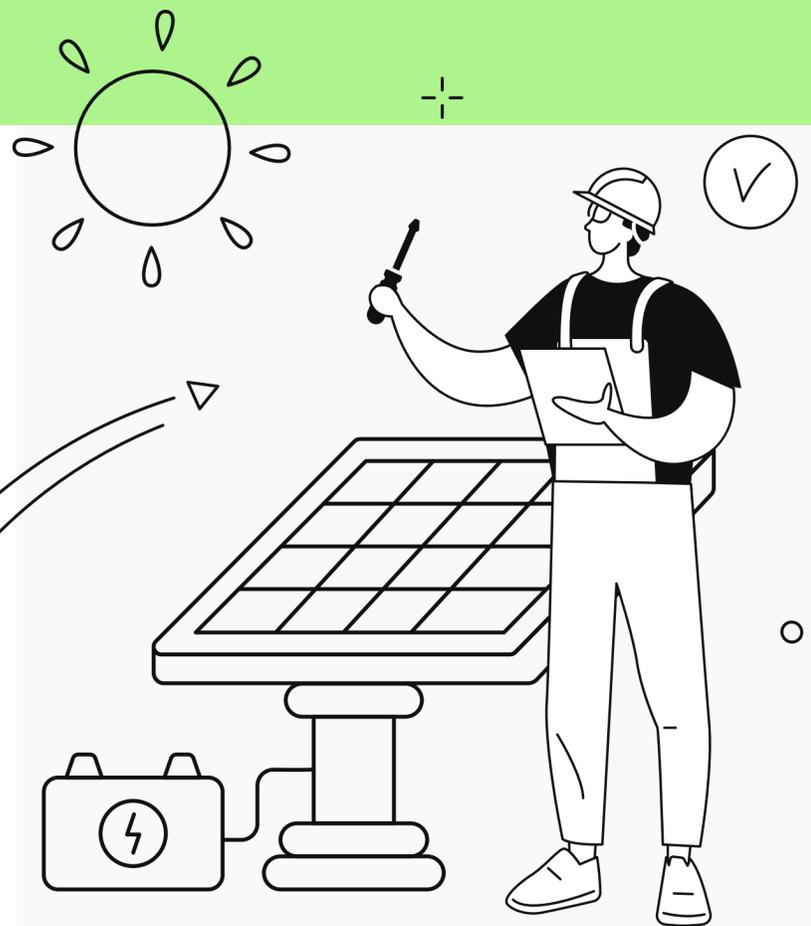

For: Renewable Energy Companies

Sample Features: Work order schedule & management; project management; installation process management; documentation incl. photo documentation; protocols incl. printable PDFs (delivery, installation, connection to grid, acceptance); client signatures; connection to energy management gear, works on tablet in offline mode.

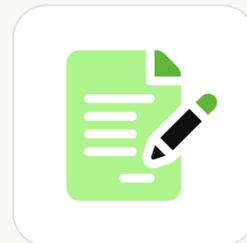

Benefits Fully digitalisation of a installation process of field installation team and installation partners by a mobile app 100% adjusted to the user and business needs. Better measurement and control of the installation process, up-to-date data and reporting, less paperwork.
