

A healthcare worker in full PPE (blue gown, hairnet, goggles, mask, and gloves) is performing a nasopharyngeal swab test on an elderly male patient. The worker is holding a long swab stick and a red-tipped test tube labeled "COVID 19". Another healthcare worker in similar PPE is visible in the background.

VITHAS HOSPITALS CARRY OUT COVID 19 TESTS

Dear Sirs:

We are writing to inform you that Vithas Xanit International Hospital has incorporated new PCR analysis technology which facilitates faster access to the results of the covid-19 tests, in addition to greater sensitivity, allowing the detection of positive cases in patients even if the viral load is very low. This new acquisition has been improved with a machine that automates the sample handling process, avoiding errors.

In addition to PCR, our centres make rapid tests for the determination of Covid-19 antigens available to all patients, as well as a test for the determination of anti-Covid-19 antibodies (IgM-IgG) using the Quantitative Immunoassay technique, in order that they can check if they are carriers of the virus at this time, if they have had contact with the virus in an asymptomatic way, and know their health status in the event of a possible contagion.

PCR and the rapid antigen determination test are determined in a sample obtained from the respiratory tract and detect the presence of RNA (Ribonucleic Acid) or a virus protein, respectively.

The antibody determination test is performed on a blood sample. IgM and IgG type antibodies are usually determined.

**RAPID ANTIGENS
DETERMINATION TEST:**

- Individual: 50€
- Groups of more than 4 persons: 30€

**DETERMINATION OF
ANTIBODIES IgM - IgG
IMMUNO ASSAY:**

- Individual: 65€
- Groups of more than 4 persons: 50€

PCR:

- Individual: 130€
- Groups of more than 4 persons: 100€
