## FAO SCIENCE AND INNOVATION FORUM SIDE EVENT

# SUPPORTING SMALL-SCALE FARMER RESILIENCE WITH INCLUSIVE, TRANSFORMATIVE CLIMATE TOOLS AND POLICIES

Friday, 14 October 2022

10AM – 12PM CEST

*Held virtually*

*Already among the most vulnerable, small-scale farmers living in marginal agricultural areas in low- and middle-income countries face increasingly severe climate change impacts.*

*Ranging from climatic extremes and variability and devastating plant pest and disease outbreaks to economic losses and unemployment, to inadequate access to improved technologies, these impacts exacerbate existing inequities.*

*CGIAR and partners are answering the Intergovernmental Panel on Climate Change's call in its Sixth Assessment Report for a more radical transformative climate response that builds resilient agrifood systems.*

*In this event, stakeholders from Kenya, the Philippines, and other countries in the Global South, with a variety of experiences and perspectives, will explore the relevance and next steps for improving climate resilience, food security and livelihoods of small-scale farmers by adopting innovative, integrated, and inclusive tools and policies.*
