2022 target countries

2022 Aquatic Foods Implementation: KEY FACTS

Produced **NERLY** 150 new knowledge products,
38 peer-reviewed articles.

6 initiatives connected

1 in every 3 participants

28 capacity development events with 1,244 participants.

23 innovations under development

Activities implemented through **130 partnerships in 8 countries from 4 regions**

7 innovations already in use in 4 countries

Research collaboration among **40 researchers from 26 countries**

10 POLICY CASES
reporting a change in the policy and/or regulatory framework in 4 countries

Improved Tilapia transferred to Nigeria

In 2022 [a batch of over fifty thousand improved GIFTs was transferred to Nigeria](#) where they are currently reared in the largest tilapia hatchery (Premium Aquaculture Ltd) in Nigeria. These are the first steps in establishing a GIFT-based aquaculture industry in Nigeria.

Generation 3 Rohu Carp grows more than 30% faster than conventional Rohu Strains

FishBase: An increasingly valuable resource

- A new study has found that FishBase is one of the most cited sources in the history of scientific research.
- FishBase has an astonishing 700,000 unique monthly users and has also attracted users in more diverse fields beyond its traditional user base.
- Despite being an increasingly valuable resource, FishBase is continually at risk of shutting down due to financial constraints.

A new strategy to support FishBase and SeaLiFeBase has been discussed and developed.

- 1) Blockchain, cryptography, and non-fungible tokens (NFTs) could be the means to sustainably fund FishBase.
- 2) Development of a micro-nutrient module to include a nutrition lens into the database related to catch

Near-real-time digital data systems

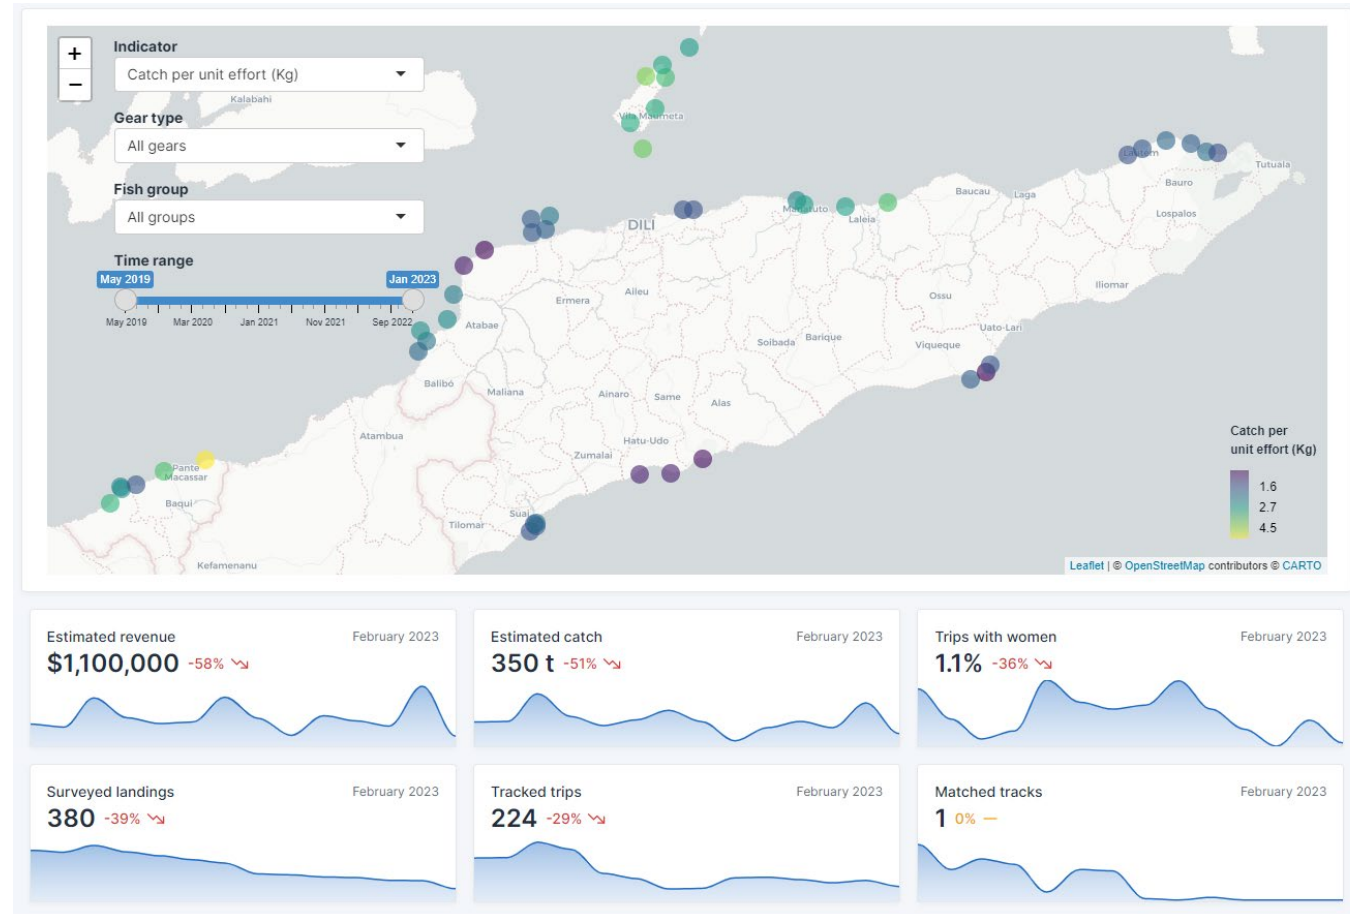

INITIATIVE ON
Aquatic Foods

[PeskaAS](#) has been adopted by the Government of Timor Leste as the national fisheries monitoring system. Currently, 15,690Km² of coast are monitored via PeskaAS in Timor-Leste. The PeskaAS dashboard is publicly available and has received 5000 visits from 700 unique visitors from 65 countries in 2022.

A “Nutrients Module” is under development - there is great potential to develop small-scale fisheries to achieve national nutrition.

Aquatic Food Systems Characterized

INITIATIVE ON
Aquatic Foods

Partnerships

Key partnerships with private and public sector, and communities, to identify data gaps and data needs.

New Knowledge

Sustainability performance of aquatic food systems measured in 7 countries.

25 datasets available, 9 reports, 11 articles produced

Aquatic Food System Sustainability Index to track progress in multiple dimensions of food system sustainability and resilience

Methodology

A methodology has been co-developed with partners to benchmark sustainability performance of aquatic food systems

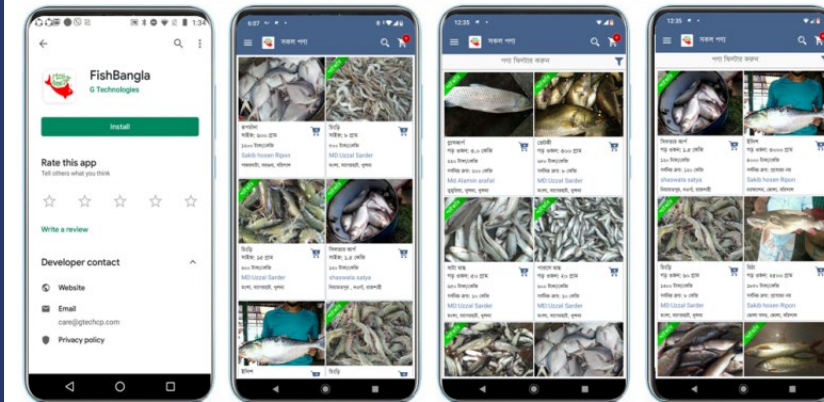

Methodology is available and adopted by other users

Digital tools available to use the methodology

Inform decisions

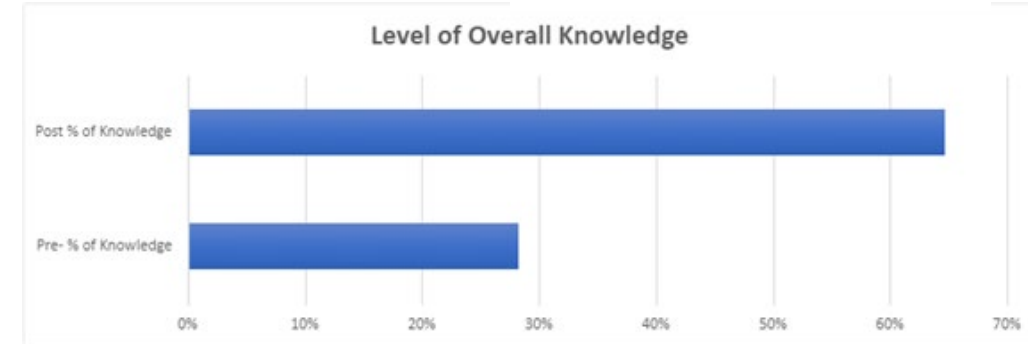

Recommendations and information provided to relevant stakeholders to support informed decisions

Rice-Fish Suitability Decision Support System, Myanmar

- Five days ToT training in December 2022 on “Rice-Fish Suitability Decision Support System Modelling” to support the capacity development of three government departments under the Ministry of Agriculture, Livestock and Irrigation (MOALI)
 - Department of Agriculture (DOA)
 - Department of Planning (DOP)
 - Department of Fisheries (DOF)
- Trainers now transferring their knowledge to the DOA and DOF staff from Ayeyarwady region through four training workshops from January to March 2023.

ToT – 13 (6 women)
Trainings – 46 (28 women)

Tackling malnutrition in children through the inclusion of dried small fish powder in their diets

INITIATIVE ON
Aquatic Foods

Inclusion of small fish powder in the [Integrated Child Development Scheme \(ICDS\) Supplementary Nutrition Program](#) to tackle malnutrition in the State of Assam, India. An estimated 7,000 children aged between 3 to 6 years across 293 Anganwadi centers are expected to benefit from this initiative.

- WorldFish with its partner has conducted series of awareness and demonstration programs to aware the benefits of small fish consumption among children in the 1000 days of life.
- As a result, the Kamrup district administration with WorldFish and partners implement a pilot project that included small fish in the regular meals o 7000 children between age 3 to 6 in 293 anganwadi centres.

Data To Action Portal for Aquatic Foods

INITIATIVE ON
Aquatic Foods

The new [Data for Action Portal](#) aims to help tackle the traditional lack of data (or access to it) that affects the transformation of aquatic food systems by being a unified source of data and research on aquatic foods, telling stories of impact and change, and it allows collaborators and scientists to add new data and stories to it.

Stories with real impact to support your initiative.

Stories on Aquadata are bite-sized and curated for a more accessible search experience. That way, as you search you can have quick insight to a specific outcome, impact or set of data, but still providing links to full research reports and datasets.
