Leading Bean research and Science through effective partnerships:

The Pan-Africa Bean Research Alliance (PABRA) Approach

Jean Claude Rubyogo
Why COMMON BEAN?

- Grown by over 150 million (mostly women) on over 7 million hectares
- A key food for over 400 million Africans
- Crucial source of **protein** and **micro-nutrients**; complimentary to rice, maize, & tubers
- Major source of **incomes**, particularly for women (farmers, retailers, and processors)
- Environmentally friendly crop (less carbon/water footprint)
The Challenge At The Time Of The PABRA’s Establishment (Why PABRA?)

1. Regional stresses to bean productivity
2. Limited crosscutting local capacity
3. Narrow local investment and resource base

1. Regional efficient and client oriented breeding approach
2. Platform for Knowledge exchange, sharing, and capacity building
3. Shared and coordinated investment and resource mobilization

PABRA addresses the complex food systems challenge with long term view which is reflected in the PABRA and Alliance Bean Programme missions: “resilient bean-based food systems that improve people’s health, incomes and access to food in an environmentally safe and gender equitable manner.”
What is PABRA

- An alliance of 31 National Agricultural Research Systems

- A consortium of 3 bean networks + CIAT + Donors established in 1996

- 630+ partners including farmer associations, NGOs, private sector, financial services providers e.g. Equity Bank and Foundation

- A coordinated institutional framework of bean R&D / investments in Africa

- ABC - Facilitator (catalyzer) of partnership and member of the research team
Current PABRA Governance Structure

✔ Facilitates co-creation and co-development
✔ Guides implementation of framework & multidisciplinary innovations
✔ Facilitates resource allocation
✔ Ensures balance and fairness

PABRA Steering Committee:

Funders: ACIAR, BMGF, GAC, SDC, USAID, SROs, governments
Scaling up partners: Gvts, private, NGOs and FOs

WECABREN Steering Committee (CORAF/WECA RD)
ECABREN Steering Committee (ASARECA REGION)
SABRN Steering Committee (CCARDESA REGION)

Alliance of Bioversity International and CIAT

National Bean Programs and other value chain actors
Alliance -scientific multidisciplinary Teams
PABRA Governance and mode of operations

• Unique governance engaging national and regional perspectives
  • PABRA is network facilitated by the Alliance but owned by 31 national bean value chain actors (NARS bean researchers and their management, private sector, producers organizations, NGOs) and sub-regional organizations
  • Problem identified at country and regional level
  • Regional interventions
  • Alliance of BI & CIAT (any other research organizations) innovations contributes to sub-regional and national priorities along the value chain
  • Synergy among various countries and organizations
  • Donors agenda integration
  • Donor funding / leverage and transparency
  • Coordinated teams and interventions
  • PABRA provides a coordinated research & Development platform e.g. with advanced research Impact through partnerships (Advanced institutions and local partners (NARS, private sector etc.)
The evolution of PABRA’s transformative agenda

**1996 – 2003**
- Building **partnerships** (ECABREN & SABREN)
- Strengthening bean **breeding** & new variety releases
- Participatory variety selection (gender lens)
- Farm agronomy

**2003 - 2009**
- Consolidating **market-led breeding approach**
- **Seed systems for wider impact** e.g., Ethiopia white pea bean
- **Climate resilience**
- Bio-fortification

**2009 - 2013**
- Extending to **value chain approach** across regions
- Improving **nutrition** (high iron & zinc)
- Geographic expansion **WECABREN** (2010)

**2014 - 2023**
- **Bean Corridor approach** generating multiple & inclusive benefits
- Investment platform for enterprise development along value chains
- Food system & policy perspective
Policy & investment strategy for SDGs and targets 2023-2030

15 million farmers increasing income by 30% through the adoption and marketing of improved beans

60 million Africans diversifying their diet through the consumption of high-nutrient beans

2 million women engaging with profitable market opportunities via the bean value chains

1,000 SMEs take-up bean business opportunities providing 10 million farmers (60% women) with new market opportunities

60 million farmers accessing climate-smart varieties that are pest, disease, and drought tolerant

1,000 partnerships: including 600 farmer organizations, 230 public and private seed enterprises, 50 grain trading organizations, 20 bean processing businesses, 20 support service providers

Policy action
1. Demand led and precision breeding, capable national bean breeding programs
2. Capacity building all actors across bean corridors
3. Multi-agency action and coordination (e.g. agriculture, health, education, and environment/conservation)

Investment strategy
1. National government & private sector investment
2. ESG impact investors
Some countries have no breeding programs— but have released bean varieties. Some varieties are released in more than one country— “Nets that work for all”
Adoption of demand-led systems and cultivating partnership along the bean value chain e.g. Rwanda

**Aggregator Trust Rwanda LTD**
(Grain off-taker)
3,000MT of NUA 566, RWR 3194, RWR 2245 and others

**I & J Harvest**
(seed producer)
Multiply NUA 566, RWR 3194 and supply to Aggregator’s Trust farmers

28,151 farmers supply grain to Aggregator Trust

PABRA (RAB and CIAT) provide agronomic/varieties & business skills support and linking to breeding pipeline to meet new variety demands

Link farmers to I & J Harvest for quality seed of improved varieties

Now expanding to other commodities in collaboration with CG/NARS and private sector
Positive trend in bean productivity growth, (2002-2021)
Impacts from Farm, to Household, Community, Country, and Continent.

1. **657 new varieties** reaching 37 million farmers have improved incomes and livelihoods.

2. Release of biofortified beans now mean that over 10 million Africans (53% women) are consuming high iron beans in 15 countries.

3. **13 million households** increased non-food expenditure by 54% due to selling improved beans.

4. More than 3.5 million farmers, half women, with improved market access as a result of PABRA.

5. Exports of beans through African bean corridors and also into international markets are growing significantly, providing revenue but also enabling more consumers access to beans.

6. **400 million people**, especially women and children, in Africa benefit from increased dietary protein, carbohydrates and micro nutrients from beans.
PABRA
Partnerships between National Programs and CIAT for impact at scale

What has shaped our approach

- Strengthen and **NOT** replace the National Systems
- Shared vision and co-creation between public-private partners for bean in Africa
- Comprehensive activities along the value chain
- Integration and complementary activities
- Inclusive governance ensuring that National Programs priorities are tackled upfront and calibrated over the years
PABRA
Partnerships between National Programs and CIAT for impact at scale

Reasons of the successful partnerships over 25 years

• Trust in CIAT scientific capacities and commitments to technologies transfer
• Transparency in all of CIAT interactions with PABRA partners
• Inclusive governance ensuring that National Programs priorities are tackled upfront and calibrated (sustainability, productivity, gender equity and climate change)
• Complementary funding from multilateral funding in the case of beans
• Continuous capacity building
• Multidisciplinary teams providing solutions
• Partners manage new varieties releases and dissemination ensuring adoption
• A mechanism for the whole stage gate, from product definition to delivery and scaling
• Beyond just a breeding network. Focus on the whole value chain to deliver impact
In 2019 PABRA won the **Al-Sumait Prize for African Development**

- The price is worthy USD 1 M (shared equally with Africa Rice)
PABRA was awarded the 2023 Africa Food Prize
