

The Clear Path to Student Success  
**Company Background**

---

**Overview:**

Classtime is a solution for classrooms that complements in-class teaching with immediate feedback on students' level of understanding.

**Our Vision:**

We give educators the formative and summative assessment tools they need to manage their classes, keep their learners engaged with fun features like gamification, and provide instant grading and clear feedback to their students. We aim to save teachers valuable time by providing real-time analytics and scoring reports while also building engaging lessons that foster collaboration.

**Headquarters:**

United States  
*Classtime Inc.*  
513 E De La Guerra St  
Santa Barbara, CA 93103

School and Institution License - All Premium Features, Custom analytics & reports, Student portal, Shared content libraries for co-authoring, Branding with your school's logo

### **The Classtime Advantage:**

Student Assessment - Classtime's efficient assessment platform engages every student and gives immediate visibility of their learning progress. After beginning a Classtime session, teachers can track students' responses in real-time, giving instant insights on their performance. Students can participate without registration or by simply using their Google, Microsoft, or Clever accounts for authentication. Sessions are automatically scored based on custom point values, saving teachers valuable time. Once a session is completed, auto-generated Excel and PDF reports are created to store and share results with students, parents, or school leadership.

Teaching Materials - Classtime's free libraries include more than 30,000 standards-aligned questions, handcrafted for students' success by education experts like Khan Academy. Students are able to be challenged with nine different tech-enabled question types: multiple choice, checkboxes, true or false, free text answer, categorizer, sorter, highlight text, and hotspot. These questions can include high-quality math notations along with images, audio, and Youtube videos to enrich students' experience and strengthen audiovisual learning.

Digital Classroom Activities - Collaborative Challenges enable teachers to develop their lessons around a meaningful narrative that is projected in the classroom for all students to see. These challenges present a problem that students must solve by answering questions on their own devices. Only if the entire classroom performs well will the Collaborative Challenge develop into a success story. Some challenges include resupplying the International Space Station, fighting city pollution, engineering a roller coaster, and more.
