

# What you should know to buy

To request compost you must place your order through the digital platform <http://compost.tirme.com/>

Currently the cost is € 3 / m<sup>3</sup>  
Remember that there is a waiting list!

The first step is to register and create an account, once it is confirmed you can request the quantity in cubic meters and select the plant where you will collect the product (Palma, Calviá or Felanitx).

Take into account the capacity of your transport to adjust each trip to the maximum, that is, if the capacity of the truck is 20m<sup>3</sup>, each order must be done based on it. Make sure the container is clean.

The purchase will be confirmed by email with the notice of the dates to remove the genre so that you can make the payment in advance and organize the transport prior to removing your compost.

On the assigned date you can go to pick up the product directly in the field without going through the weighing scale of the plant. At the end of the load, you will sign the delivery of the order on a mobile device.

The space where you will store the compost must be free of debris to avoid contamination.

To know the characteristics and application rates, it is recommended to consult the information provided to your email.

Distribute the compost evenly about 20 days before sowing, incorporating it in the traditional way.

It is advisable to water the entire surface homogeneously the first week.

It is not advisable to apply directly to the plant in a localized way and without respecting the waiting time, to avoid adverse reactions.

If you are interested in more information about compost and its process, you can find it on our website [www.tirme.com](http://www.tirme.com)

For any clarification or doubt, you can send us an email to: [compost@tirme.com](mailto:compost@tirme.com)
