

# **Retirement / Investment statement Labeling Instructions**

# Evaluation Set Requirements

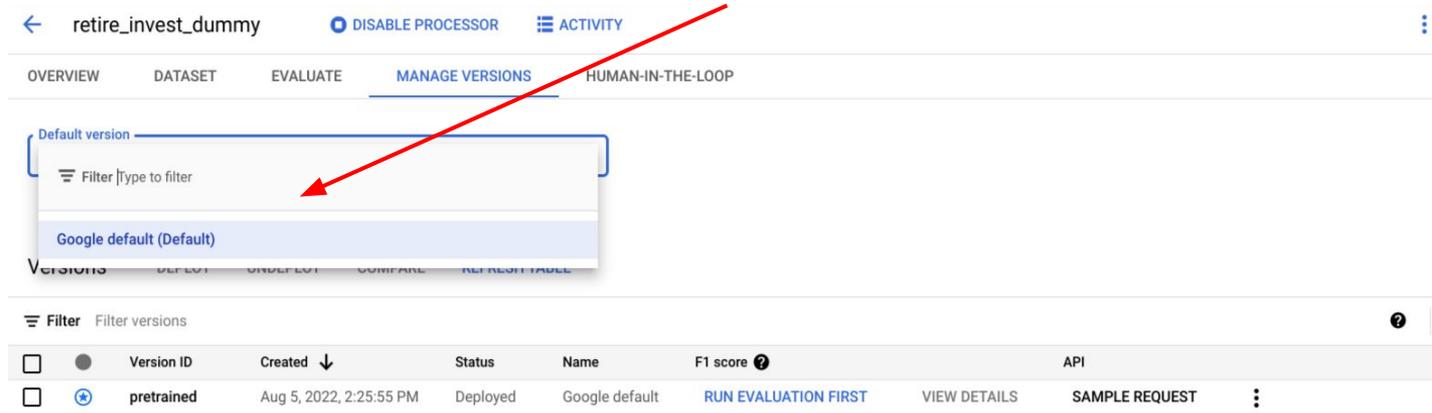

In order to do fair and thorough evaluation of the model, the evaluation set should take the following dimensions into consideration

1. **Revisions:** Documents should be in English for all revisions.
2. **Size:** It is recommended to have 500+ documents for each evaluation set.
3. **Template Diversity:** The documents should be diverse, e.g. different templates, issue year, different sources... etc.
4. **Value Diversity:** Documents should capture all possible values.
5. **Handwritten:** It is preferred to separate handwritten documents from typed ones (i.e. have 2 separate evaluation sets) and report metrics for each.

# Processor Version

These instructions are specific for Retirement/Investment Statement Processor version:

“Google default”

The screenshot shows the 'Manage Versions' tab for a processor named 'retire\_invest\_dummy'. At the top, there are navigation links: '← retire\_invest\_dummy', 'DISABLE PROCESSOR', and 'ACTIVITY'. Below this are tabs for 'OVERVIEW', 'DATASET', 'EVALUATE', 'MANAGE VERSIONS' (which is active), and 'HUMAN-IN-THE-LOOP'. A dropdown menu is open under 'MANAGE VERSIONS', showing a search bar 'Filter | type to filter' and a single option 'Google default (Default)'. A red arrow points to this option. Below the dropdown, there is a table of versions with columns: 'Filter', 'Version ID', 'Created', 'Status', 'Name', 'F1 score', and 'API'. The table contains one row for a version named 'pretrained'.

Account Allocation shows the percentage that each asset class represents of your total account value. Account Allocation for equities, fixed income, and other categories may include mutual funds and may be net of short positions. NFS has made assumptions concerning how certain mutual funds are allocated. Closed-end mutual funds and Exchange Traded Products (ETPs) listed on an exchange may be included in the equity allocation. The chart may not reflect your actual portfolio allocation. Consult your broker/dealer prior to making investment decisions.

# Deposits and Withdrawals Rules and Examples (1/2)

Labeling of deposits and withdrawals sources, amounts and dates should follow certain rules:

1- Only totals should be labeled for a given category of deposits or withdrawals. In other words, a table with individual transactions (e.g. stock purchases or selling, dividends received or reinvested, specific bank deposits received, etc.) should only have totals labeled (typically the last row and bold rows). (See Examples 3->6).

2- Only columns or rows related to the total account should be labeled. If withdrawals and deposits are provided for sub-accounts or for specific funds or stocks, they should not be labeled.

## Special Convention

For "Net Contributions", "Net Cash flow", "Securities transferred in/out", "Change in market value", etc. it can be a Deposit OR a Withdrawal:

- If the amount is negative or between brackets: "\$ -100", "(100)" etc.  
-> *Label as withdrawal.*
- If the amount is positive or 0:  
-> *Label as deposit.*
- If the amount is empty:  
-> Label the source as deposit.

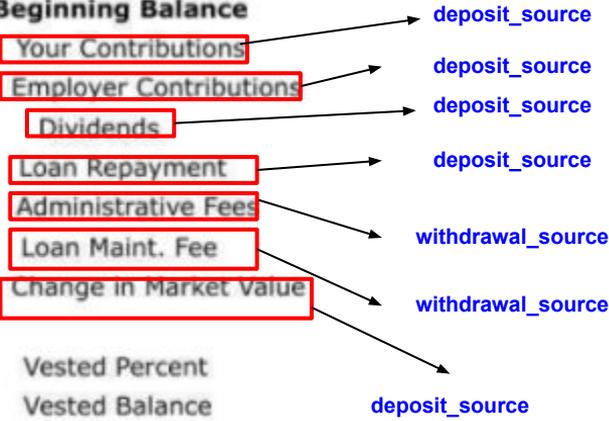

# Deposits and Withdrawals - Example 1

- Balances and Amounts should always be for the total account value. So the second column should be labeled and not the first.

# General Labeling Instructions

# Occurrence Type

There are 4 occurrence types which restricts the number of annotations for each entity:

- **OPTIONAL\_ONCE**: Entity can be present zero or multiple times but should have one unique value.
- **OPTIONAL\_MULTIPLE**: Entity will appear zero or multiple times and with different values.
- **REQUIRED\_ONCE**: Entity can be present once or multiple times but should have one unique value.
- **REQUIRED\_MULTIPLE**: Entity will appear once or multiple times and with different values.

**Important: always label every single occurrence of every entity, regardless of the occurrence type and even if the different occurrences have the same value.**

# Optical Character Recognition (OCR) Errors

Drawing bounding boxes around entities will automatically populate a text captured through OCR (Optical Character Recognition). In some cases, the captured text is not accurate and doesn't reflect what is on the page, especially for documents that are blurry or of low resolution. These values should be corrected manually through "Value" input text.

# Bounding Box Annotation

Bounding boxes should fit the correct text as much as possible:

- Avoid overlapping bounding boxes. This can be tricky when values are close to each other.
- Avoid oversized boxes which incorporates background artifacts such as table borders.

Example 1

Activity	FA Freedom 2035 I	Total
Beginning Balance	\$10,702.51	\$10,702.51
Your Contributions	\$288.46	\$288.46

Change in Market Value	\$388.07	\$388.07
Ending Balance	\$11,377.83	\$11,377.83

Incorrect Annotation:  
Bounding boxes are overlapping

Change in Market Value	\$388.07	\$388.07
Ending Balance	\$11,377.83	\$11,377.83

Incorrect Annotation:  
Bounding boxes oversized

# Case Sensitivity

DocAI evaluation is case sensitive and can affect the final evaluation. While annotating please be aware to fix any casing issues generated by OCR.

Examples:

- “yes” != “Yes”
- “no” != “No”

# Money

For money entries the annotation bounding box and value text should include the currency if present on the document.

If the document contains currency with no values, then annotations could be omitted, as shown in the example on the bottom right.
