

Architecting with Google Cloud Design and Process

This course features a combination of lectures, design activities, and hands-on labs to show you how to use proven design patterns on Google Cloud to build highly reliable and efficient solutions and operate deployments that are highly available and cost-effective. This course was created for those who have already completed the Architecting with Google Compute Engine or Architecting with Google Kubernetes Engine course.

 **DURATION**
2 days

 **LEVEL**
Intermediate

 **FORMAT**
Instructor led
On-demand

What you'll learn

- Apply a tool set of questions, techniques and design considerations
- Define application requirements and express them objectively as KPIs, SLO's and SLI's
- Decompose application requirements to find the right microservice boundaries
- Leverage Google Cloud developer tools to set up modern, automated deployment pipelines
- Choose the appropriate Google Cloud Storage services based on application requirements
- Architect cloud and hybrid networks
- Implement reliable, scalable, resilient applications balancing key performance metrics with cost
- Choose the right Google Cloud deployment services for your applications
- Secure cloud applications, data and infrastructure
- Monitor service level objectives and costs using Stackdriver tools

Overview	9 Modules · 82 Videos · 3 Labs · 25 Classroom activities
Who this course is for	<ul style="list-style-type: none">• Cloud Solutions Architects, Site Reliability Engineers, Systems Operations professionals, DevOps Engineers, IT managers• Individuals using Google Cloud to create new solutions or to integrate existing systems, application environments, and infrastructure with the Google Cloud
Products	<ul style="list-style-type: none">• App Engine• Cloud Deployment Manager• Cloud Functions• Cloud IAM• Cloud Load Balancing• Compute Engine• Cloud Build• Container Registry• VPC Networking
Prerequisite	<ul style="list-style-type: none">• Have completed Architecting with Google Compute Engine, Architecting with Google Kubernetes Engine, or have equivalent experience• Have basic proficiency with command-line tools and Linux operating system environments• Have systems operations experience, including deploying and managing applications, either on-premises or in a public cloud environment
Not covered	Tips and advice on taking the Professional Cloud Architect exam

Module 01 **Defining the Service**

Topics	<ul style="list-style-type: none">• Describe users in terms of roles and personas• Write qualitative requirements with user stories• Write quantitative requirements using key performance indicators (KPIs)• Evaluate KPIs using SLOs and SLIs• Determine the quality of application requirements using SMART criteria
---------------	---

Activities	3 activities and 1 quiz
-------------------	-------------------------

Module 02 **Microservice Design and Architecture**

Topics	<ul style="list-style-type: none">• Decompose monolithic applications into microservices• Recognize appropriate microservice boundaries• Architect stateful and stateless services to optimize scalability and reliability
---------------	--

- Implement services using 12-factor best practices
- Build loosely-coupled services by implementing a well-designed REST architecture
- Design consistent, standard RESTful service APIs

Activities 2 activities and 1 quiz

Module 03 DevOps Automation

- Topics**
- Automate service deployment using CI/CD pipelines
 - Leverage Cloud Source Repositories for source and version control
 - Automate builds with Google Cloud Build and build triggers
 - Manage container images with Google Container Registry
 - Create infrastructure with code using Deployment Manager and Terraform

Activities 1 lab and 1 quiz

Module 04 Choosing Storage Solutions

- Topics**
- Choose the appropriate Google Cloud data storage service based use case, durability, availability, scalability and cost
 - Store binary data with Cloud Storage
 - Store relational data using Cloud SQL and Spanner
 - Store NoSQL data using Firestore and BigTable
 - Cache data for fast access using Memorystore
 - Build a data warehouse using BigQuery

Activities 2 activities and 1 quiz

Module 05 Google Cloud and Hybrid Network Architecture

- Topics**
- Design VPC networks to optimize for cost, security and performance
 - Configure global and regional load balancers to provide access to services
 - Leverage Cloud CDN to provide lower latency and decrease network egress
 - Evaluate network architecture using the Network Intelligence Center
 - Connect networks using peering and VPNs
 - Create hybrid networks between Google Cloud and on-premises data centers

Activities 2 activities and 1 quiz

Module 06 Deploying Applications to Google Cloud

- Topics**
- Choose the appropriate Google Cloud deployment service for your applications
 - Configure scalable, resilient infrastructure using Instance Templates and Groups
 - Orchestrate microservice deployments using Kubernetes and GKE
 - Leverage App Engine for a completely automated platform as a service (PaaS)
 - Create serverless applications using Google Cloud Functions

Activities 1 lab and 1 quiz

Module 07 Designing Reliable Systems

- Topics**
- Design services to meet requirements for availability, durability and scalability
 - Implement fault tolerant systems by avoiding single points of failure, correlated failures and cascading failures
 - Avoid overload failures the the circuit breaker and truncated exponential backoff design patterns
 - Design resilient data storage with lazy deletion
 - Analyze disaster scenarios and plan for disaster recovery using cost/risk

Activities 2 activities and 1 quiz

Module 08 Security

- Topics**
- Design secure systems using best-practices like separation of concerns, principle of least privilege and regular audits
 - Leverage Google Cloud Security Command Center to help identify vulnerabilities
 - Simplify cloud governance using or organization policies and folders
 - Secure people using IAM roles, Identity Aware Proxy and Identity Platform
 - Manage the access and authorization of resources by machines and processes using service accounts
 - Secure networks with with private IPs, firewalls and Google Cloud private access
 - Mitigate DDoS attacks by leveraging Cloud DNS and Cloud Armor

Activities 1 activity and 1 quiz

Module 09 Maintenance and Monitoring

- Topics**
- Manage new service versions using rolling updates, blue-green deployments and canary releases

- Forecast, monitor and optimize service cost using the Google Cloud pricing calculator, billing reports and by analyzing billing data
- Observe if your services are meeting their SLOs using Stackdriver Monitoring and Dashboards
- Use Uptime Checks to determine service availability
- Respond to service outages using Stackdriver Alerts

Activities

1 activity, 1 lab and 1 quiz
