

1/28/21
ARUBA PCR

Comunicado de ATA (Aruba Tourism Authority)

In the Aruban Government's continuing efforts to provide the safest, seamless and coordinated travel experience possible, we hereby would like to inform you that all necessary facilities and procedures are in place for any visitor needing to take a PCR test while in Aruba as a requirement for re-entry to their country/state of origin.

Our efforts are in accordance with the Centers for Disease Control and Prevention and the Government of the United States of America requirement that returning travelers present a negative COVID-19 test result. This will become effective on January 26, 2021.

Aruba has a modern infrastructure, state-of-the-art hospital and well-equipped medical facilities. Three (3) certified laboratories in Aruba will offer the PCR testing service to outbound travelers. The facilities have ample test kits available and testing is priced between \$75 and \$126. Visitors will find appointments easy to book and the turnaround time for test results is within 24 hours. Between the facilities, visitors will have the option to make an appointment, walk in, or have the test done at their place of stay.

Please take note that a dedicated landing page on [aruba.com](https://www.aruba.com) under the health requirements section will be live later today, which will include all the pertinent details for visitors to access
