Quantway transforms introductory college math from a gatekeeper to a gateway, particularly for traditionally underserved students.

What is Quantway Core?
Quantway Core is an accelerated quantitative reasoning course that:

- Provides students and college institutions with a more successful alternative to the traditional developmental mathematics sequence for students who are placed two course levels below college-level mathematics.

- Allows students to complete their developmental mathematics requirements in a single term so they can be eligible to enroll in a college-level quantitative reasoning course.

- Is taught using a unique pedagogical approach that promotes collaborative learning and addresses socio-emotional factors that affect student success; employs innovative curricula supported by aligned assessments and an online student platform.

- Provides students with a firm conceptual mathematical understanding in order to master developmental goals and use quantitative tools intelligently in their daily lives (aligned with AMATYC stance on the preparation of non-calculus-track students).

Why should your institution adopt Quantway Core?
Quantway Core students outperform students who take the traditional remediation track in half the time. Nationally, only 29% of students successfully complete the traditional sequence by the end of two terms, while 71% of Quantway students successfully complete the course in one term.

- Many more first-generation, female, low-income, Hispanic, and African-American developmental mathematics students are able to achieve higher levels of education.

- Quantway 1 has consistently produced positive and substantial improvement in student results, even as the national annual enrollment has increased four-fold.

- Students save time and money by completing transfer-level mathematics requirements more quickly. Institutions save money because Quantway 1 students go on to take and succeed in more courses.
Why should faculty join the network?

Be part of a growing network of faculty from over 90 institutions across the country.

Faculty teaching Quantway benefit from a comprehensive professional development program that includes online resources, faculty mentorship, a community of support, and online resources.

Experienced network faculty lead the training and mentoring of all new faculty joining the network.

Faculty teams, each comprised of over a dozen faculty, lead all of the core aspects of the development and improvement of the program.

The Quantway instructional system also includes a common technology platform that supports teaching, rapid data analytics, and professional learning across the national network.

How was Quantway Core developed and designed?

Quantway was created through a collaborative process that included community college and university faculty and was developed using a strong pedagogical research base. Researchers, practitioners, and the major mathematics professional societies worked together to establish the learning outcomes and design principles that guide student work. Quantway was developed and continues to be improved by community colleges for community colleges.
