We work with clients from across the globe.

Our consulting services

Find out what we are best at.

Product vision workshops

The concept of a new product or system is frequently insufficient to fully comprehend the required workload. Without it, it is impossible to define a workable schedule or a budget. That is precisely where Codete's dedicated workshops come in handy. Our Consulting Team will help your company verify your digital product idea and plan the resources for its delivery.

Audit & consulting

You can count on a thorough analysis of your software development process, code, infrastructure, and potential for digital success. Depending on your requirements, our team will provide you with a comprehensive report on prospective product enhancements, performance improvements, cost and risk reduction strategies, and ways to verify the feasibility of your product idea.

Product design & prototyping

We offer a broad variety of product design and prototyping services to help you make your product more accessible, functional, and appealing. From delivering a Proof of Concept (PoC) through developing a Minimum Viable Product (MVP) to handling all aspects of UX/UI design, we've got you covered.

CTO as a Service

If you require assistance in developing a sound IT strategy for your business, our CTO as a Service option is the best solution for you. We can assist you in all areas of software development and product delivery thanks to our diversified technological competence and years of experience.

Product vision workshops

Discover the details and benefits behind our workshops.

Product-focused workshops with our consulting experts are the best choice for verifying your digital product idea, selecting the optimal technology solutions, and planning the resources required to turn your vision into reality.

At the end, we provide a final report summarizing the key findings, in which you will find:

- suggested architecture, tech stack, and team composition,
- product backlog,
- preliminary schedule and budget.

Workshop details

The workshops are typically divided into several phases:

Phase 1: Initial diagnosis

This phase, which may start prior to the workshop, focuses on the Consulting Team collecting information about the product and its goals.

Phase 2: Workshop plan

We set the primary goal of the workshop based on the client's needs. This could include creating a backlog, architecture, determining project feasibility, and other tasks.

Phase 3: Workshops

As a standard, we run three sessions of three hours each. Workshops are always led by a skilled team of engineers and managers.

Phase 4: Closure

This is the stage at which we prepare a final report and deliver it to the client.

Our Consulting Team

Meet our experts from the Consulting Department at Codete.

Their experience includes years spent developing software solutions as engineers and/or managers,
but also contact with a wide range of industries that gives them a broad understanding of industry-specific issues.

Dawid Pacholczyk

Consulting Manager

Consulting Manager at Codete with over 15 years of experience in the IT sector and a strong technical background. Seasoned in working with multinational companies. Ph.D. student and lecturer at Polish-Japanese Academy of IT, focused on software architecture, software development, and management.

"Any project or company is not a machine full of gears. It is a group of committed and dedicated people focused on a specific goal. The key to success is not only an individual approach to each challenge, but also connecting the dots correctly and helping people achieve success. Thanks to working together and using our potential, we can win."

Our Consulting Team

Meet our experts from the Consulting Department at Codete.
Karol Przystalski, CTO at Codete

In 2015, he received his Ph.D. from the Institute of Fundamental Technological Research of the Polish Academy of Sciences. His area of expertise is artificial intelligence.

Szymon Gołębiewski, IT Project Manager

15 years of experience in IT project management. Worked for Fortune 500 companies, international start-ups, and software houses. Big fan of agile methods of improvement (but understands that waterfall can be sometimes useful as well).
Piotr Wawryka, Research & Development Manager

R&D Manager with over 5 years of commercial experience writing Python applications. Software developer and data scientist at Codete since 2017 and a Ph.D. student at AGH University of Science Technology. His main field of interest is neural networks and their practical applications.

Piotr Zając, PHP Programmer

PHP Programmer since 5.2 with experience in e-commerce and the financial market. All around Event-based development enthusiasts. Domain-Driven Design practitioner.

Michał Czekaj, Product Designer

Designer with over 7 years of experience. Designed and supervised more than 40+ successful projects. Experienced in managing scattered teams on international markets (US, Germany, Japan, Netherlands, Sweden, Poland). Provides complex UI/UX solutions in Waterfall and Agile methodology with design, communication, management & analytical skills.

...and many more!

Case study: B4 Investigate

Product vision & MVP for fraud detection SaaS platform

Codete's specialists in software development assist B4 Investigate in creating and developing a SaaS platform for financial fraud detection, starting with a Minimum Viable Product (MVP).

After successfully helping their customers with financial fraud detection using a desktop program, B4 Investigate made the decision to advance further and to broaden its offering with a unique, highly-specialized internet platform (SaaS – System as a Service).

B4 Investigate approached Codete for assistance during the entire process of its creation – from selecting the optimal tech solutions, to the development of the web application.

Case Study: B4 Investigate

Phase 1: Product vision workshops

In order to move the original B4 Investigate application to the cloud, our experts were asked to put together a scalable solution based on contemporary technology. First, we invited the client to participate in our workshops.

Our role was to organize and lead the meetings that let us better understand the operations of our client before recommending the best technical stack, a scalable infrastructure, and timed calculations. That combination was key for planning out the work in the project.

Case Study: B4 Investigate

Phase 2: MVP development

Following productive workshops, we decided to support B4 Investigate in developing their B4 PreCrime Cloud platform from a technical standpoint. To deliver the proposed solution, Codete assembled a team of professionals consisting of two engineers (now expanded to three), one tester, and a project manager. The client was actively involved throughout the process.

Using the Heroku platform, our developers have already constructed and implemented the MVP – the initial version of the application, which includes all essential features. We are currently working on myB4 development, already organizing the subsequent steps, and adjusting our team of specialists to match the needs of our clients.

Tech stack: React, Node.js, PostgreSQL, Jest, Terraform, Heroku

Client testimonials

Today we have our platform: myB4.ai. It's been developed over 5 months time and the output of this is that we have a multitenant situation on our platform that we can use, that our customers can log into, and do assessments on different scopes. (...) We have managed to complete a product on time, on budget, with the functionality we desired.

John Wallhoff
Chief Data Architect & CEO , B4 Investigate AB

Highly recommended! We have been working continuously with Codete since 2017. The development of our online platform for corporate learning has greatly benefited from the experience of Codete's frontend, backend and iOS developers. Support from Codete's DevOps engineers has helped us to bring our infrastructure to a whole new level of performance and stability.

Jan Veira
Managing Director and Co-Founder, University4Industry
