REGULAR AGENDA (Part 4)

NEW BUSINESS

1. AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF COMPTON ADOPTING MITIGATED NEGATIVE DECLARATION 951 AND MITIGATION MONITORING PROGRAM AND APPROVING CHANGE OF ZONE CASE NO. 2021-003 REMOVING THE PARKING (P) ZONING CLASSIFICATION AND ZONING THE SITE 100% LIMITED COMMERCIAL (CL) FOR THE PROPERTY LOCATED AT 930 WEST COMPTON BOULEVARD (First Reading)

2. A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF COMPTON ADOPTING MITIGATED NEGATIVE DECLARATION NO. 951AND MITIGATION MONITORING PROGRAM AND APPROVING TENTATIVE TRACT MAP NO. 82807 (SUBDIVISION CASE NO. 21-001) RELATED TO A REQUEST TO CREATE A 60 UNIT CONDOMINIUM MAP FOR THE PROPERTY LOCATED AT 930 WEST COMPTON BOULEVARD

JUNE 28, 2022

TO: HONORABLE MAYOR AND COUNCIL MEMBERS

FROM: COMMUNITY DEVELOPMENT DEPARTMENT

SUBJECT: AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF COMPTON ADOPTING MITIGATED NEGATIVE DECLARATION 951 AND MITIGATION MONITORING PROGRAM AND APPROVING CHANGE OF ZONE CASE NO. 2021-003 REMOVING THE PARKING (P) ZONING CLASSIFICATION AND ZONING THE SITE 100% LIMITED COMMERCIAL (CL) FOR THE PROPERTY LOCATED AT 930 WEST COMPTON BOULEVARD

SUMMARY

The City Council will consider a request to approve Change of Zone application Case No. 2021-003, a request to remove the existing Parking (P) zoning leaving the site as 100% Limited Commercial on a 2.45 acres Successor Agency owned lot located at 930 W. Compton Blvd.

BACKGROUND

On May 11, 2022, the Planning Commission held a public hearing on the above-listed request. After due consideration, the Planning Commission voted to not recommend approval to the City Council of Mitigated Negative Declaration (MND) No. 951, the Mitigation Monitoring and Reporting Program (MMRP) and Change of Zone Case No. 2021-003. The project also is requesting approval of a General Plan Amendment, Conditional Use Permit and Tentative Tract Map.

PROJECT DESCRIPTION

The City Ventures Company is requesting approval of Change of Zone Case No. 2021-003, a request to remove the existing Parking (P) zoning leaving the site as 100% Limited Commercial to develop a gated 60-unit three-story condominium community. The site is a vacant 2.45-acre successor agency owned property located at 930 W. Compton Blvd. (southeast corner of Compton Blvd. and Kemp Avenue).

STATEMENT OF THE ISSUE

The project is requesting a zone change to remove the existing Parking overlay zoning (P) on the southern half of the site resulting in a site with only Limited Commercial zoning (100%). The proposed zone change will give the site a single Limited Commercial (CL) zoning that permits high density residential development (29 units per acre) with a Conditional Use Permit.

A Mitigated Negative Declaration was prepared for the project. The Initial Study/Mitigated Negative Declaration No. 951 was posted with the Los Angeles County Clerk's office in Norwalk, circulated for a 20-day public review period from November 16, 2021 to December 5, 202. The proposed project will not cause any negative impacts.

FINANCIAL IMPACT

None. No City funds will be used for this project.

RECOMMENDATION

Staff recommends the City Council approve Change of Zone application Case No. 2021-003.

ROBERT DELGADILLO, SENIOR PLANNER
COMMUNITY DEVELOPMENT DEPARTMENT

APPROVED FOR FORWARDING:

THOMAS THOMAS
CITY MANAGER

ORDINANCE NO. _____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF COMPTON ADOPTING MITIGATED NEGATIVE DECLARATION 951 AND MITIGATION MONITORING PROGRAM AND APPROVING CHANGE OF ZONE CASE NO. 2021-003 REMOVING THE PARKING (P) ZONING CLASSIFICATION AND ZONING THE SITE 100% LIMITED COMMERCIAL (CL) FOR THE PROPERTY LOCATED AT 930 WEST COMPTON BOULEVARD

WHEREAS, the City Venture Company has made application for a change of zone in accordance with Section 30-28 of the Compton Municipal Code to remove the zoning classification of Parking (P) leaving the site as 100% Limited Commercial (CL) for certain real property situated in the City of Compton, legally described as follows:

APN: 6161-001-902; located at 930 W. Compton Blvd., Compton, California; and

WHEREAS, the change of zone must be processed in accordance with Compton Municipal Code section (CMC) 30-28; and

WHEREAS, legal notice has been provided in accordance with the requirements of the Compton Municipal Code; and

WHEREAS, that the notice of intent along with the Initial Study/Mitigated Negative Declaration No. 951 was prepared for the Project, in accordance with the California Environmental Quality Act (CEQA) and was posted with the Los Angeles County Clerk's office in Norwalk, circulated for a 20 day public review period from November 16, 2021 to December 5, 2021 and posted on the City's website; and

WHEREAS, the City Council has reviewed and consider the Initial Study/Mitigated Negative Declaration No. 951, the Mitigation Monitoring and Reporting Program, and any comments provided thereon; and

WHEREAS, the public hearing notice was also advertised and published in the local Compton Bulletin newspaper on June 22, 2022 and

WHEREAS, this case was also properly noticed in accordance with California Government Code 65090 and 65091; and

WHEREAS, a public hearing upon said request for a Change of Zone was held before the Planning Commission on December 8, 2021 and May 11, 2022 and the Planning Commission voted to not recommend approval to the City Council; and

WHEREAS, evidence was heard from all persons interested in effecting said Change of Zone and all persons protesting same, and the City Council being fully informed,

WHEREAS, a public hearing upon said request for Change of Zone Case No. 21-003 was held before the City of Compton City Council on June 28, 2022; and

WHEREAS, the City Council being fully informed:

F I N D S

Mitigated Negative Declaration:

1. That in accordance with the California Environmental Quality Act (CEQA) (Public Resources Code, Division 13 §21000 et seq.) an Initial Study for the project was prepared that identifies and evaluates the environmental impacts of the project.
2. That the City of Compton, in its capacity as Lead Agency, has determined that the proposed project requires a Mitigated Negative Declaration as part of its environmental review.
3. That the notice of intent along with the Initial Study/Mitigated Negative Declaration No. 951 was posted with the Los Angeles County Clerk's office in Norwalk, circulated for a 20-day public review period, mailed to abutting property owners and posted on the City's website.

4. That all environmental documents have been processed in accordance with the California Environmental Quality Act (CEQA) guidelines.
5. That the approval and subsequent implementation of the proposed project *will not* have the potential to degrade the quality of the environment with the implementation of the conditions of approval.
6. That the approval and subsequent implementation of the proposed project *will not* have the potential to achieve short-term goals to the disadvantage of long-term environmental goals with the implementation of the conditions of approval.
7. That the approval and subsequent implementation of the proposed project *will not* have impacts that are individually limited, but cumulatively considerable, when considering the proposed development in the immediate vicinity with the implementation of the conditions of approval.
8. That the approval and subsequent implementation of the proposed project *will not* have environmental effects that will adversely affect humans, either directly or indirectly with the implementation of the conditions of approval.

Change of Zone

1. That the removal of the Parking (P) zone resulting in a 100% Limited Commercial (CL) zone will be in conformance with the existing Limited Commercial zoning on the site and the new general plan land use designation of General Commercial. The GPA will achieve a higher level of consistency between the General Plan and Zoning map and have one zone on the lot.
2. That the change of zone removing the Parking (P) zone and leaving the site as Limited Commercial (CL) is more suitable for the subject site in that the zoning will be consistent with the project and existing land use patterns of development in that higher density residential use proposed will be consistent with the Limited Commercial zone.
3. That the change of zone removing the Parking (P) resulting in a 100% Limited Commercial (CL) will not be detrimental to the surrounding area in that the site is already intended for medium density residential development. The proposed zone change will allow for a slightly higher density and will serve as a transition development from the heavily trafficked Compton Blvd., eliminate blight, develop a vacant successor owned site and provide additional affordable housing opportunities, result in a single zone for the lot and help encourage additional redevelopment in the area.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF COMPTON RESOLVES:

Section 1. The City Council adopted Mitigated Negative Declaration No. 951, made appropriate environmental findings, and adopted a Mitigation Monitoring and Reporting Program for the Project. The documents and other material that constitute the record on which this decision is based are located in Department of Community Development the and are in the custody of the Department of Community Development.

Section 2. If any section, subsection, subdivision, sentence, clause, phrase, or portion of this Ordinance or the application thereof to any person or place, is for any reason held to be invalid or unconstitutional by the final decision of any court of competent jurisdiction, the remainder of this Ordinance shall remain in full force and effect.

Section 3. That this ordinance removing the Parking (P) zoning classification, leaving the site as 100% Limited Commercial for the property located at 930 W. Compton Blvd. is hereby adopted and shall be in full force thirty (30) days after the date of its final passage and adoption by the City Council.

Section 4. That a copy of this Ordinance shall be filed in the offices of the City Clerk, Building & Safety and Community Development Department (Planning).

Section 5. The Mayor shall sign and the City Clerk shall attest to the adoption of this ordinance.

ADOPTED this _____ day of _____, 2022.

_____
MAYOR OF THE CITY OF COMPTON

ATTEST:

_____
CITY CLERK OF THE CITY OF COMPTON

STATE OF CALIFORNIA)
COUNTY OF LOS ANGELES) ss
CITY OF COMPTON)

I, Alita Godwin, City Clerk of the City of Compton, do hereby certify that the foregoing Ordinance was adopted by the City Council of the City of Compton, signed by the Mayor and attested by the City Clerk at a regular meeting thereof held on the _____ day of _____, 2022.

That said Ordinance was adopted by the following vote, to wit:

AYES: COUNCIL MEMBERS-
NOES: COUNCIL MEMBERS-
ABSENT: COUNCIL MEMBERS-

7. **Project Location:** The Project site is located at 930 West Compton Boulevard, bounded by West Compton Boulevard to the north, West 151st Street to the south, South Kemp Avenue to the east, and South Dwight Avenue to the west, in the City of Compton, County of Los Angeles, California, as shown in Figure A – Aerial. The site is in Township 3 South, Range 13 West, San Bernardino base and meridian, and comprises Tax Assessor parcel number 6161-001-902.

8. **Existing General Plan Vision 2010:** Medium Density Residential (8.1 to 17 du/acre net)

The Medium Density Residential (MDR), General Plan designation, allows for residential development up to 17 units per net acre and a population density of up to 66 persons per acre. Development typically consists of low-rise apartments, townhomes and condominiums, and single-family patio homes on small lots. Uses and development densities permitted in the Low-Density Residential category are also appropriate for Medium Density Residential areas (see Figure B – General Plan).

9. **Existing Zoning:** C-L – Limited Commercial & P – Automobile Parking

The Limited Commercial Zone (C-L) is established to provide neighborhood, community, and regional retail business areas with related uses. The Automobile Parking Zone (P) is established to provide for off-street parking for residential, commercial, industrial, public, and other uses in the City (see Figure C – Zoning).

Currently, the existing zoning is not consistent with the General Plan.

10. **Surrounding Land Uses and Setting:**

	Land Use	General Plan	Zoning
Project Site	**Vacant**	**Medium Density Residential**	**C-L – Limited Commercial & P – Automobile Parking**
North	West Compton Boulevard with Existing Commercial and Single-Family Residential Uses Beyond	Mixed-Use	C-L – Limited Commercial
South	Existing Single-Family Homes	Low-Density Residential	R-M – Medium-Density Residential
East	Small Lot Single-Family Town Homes	Medium-Density Residential	C-L – Limited Commercial
West	Existing Commercial/DNA Liquor Store & Single-Family Residential Uses	Mixed-Use	C-L – Limited Commercial & R-L – Low-Density Residential

11. **Description of the Site and Project:**

Environmental Setting

The Project site consists of approximately 2.45 acres of vacant land. A records review of aerial photography performed for the Phase I Environmental Site Assessment prepared by Stantec Consulting Services, Inc. determined the Project site was used for light agricultural purposes between 1928 and 1963. Then by 1977, the property was developed with a convalescent hospital and associated parking. By 2005 the convalescent hospital had been demolished, and the property has been vacant ever since. It is noted that the City Planning Commission adopted Resolution 3828 on June 13, 2007, for a Conditional Use Permit (CUP) case number 2589, Variance case number 2590, and Tentative Tract Map 67558 to build a Planned Unit Development of 41 townhouse units. However, this project was not built.

The site is bounded by West Compton Boulevard to the north, South Kemp Avenue to the east, South Dwight Avenue to the west, and West 151st Street to the south. Curb, gutter, and sidewalk already exist on West Compton Boulevard, South Kemp Avenue, and South Dwight Avenue. As well, seven (7) mature trees exist in the right-of-way on West Compton Boulevard. The trees include five (5) Ficus (Moraceae) and two (2) Jacaranda mimosifolia trees.

Regionally, the subject site is in the Peninsular Ranges geomorphic province, characterizing southern California's southwest portion. It is in these areas where major right-lateral active fault zones predominately trend northwest to southeast. The Peninsular Ranges province comprises plutonic and metamorphic rock, with lesser amounts of Tertiary volcanic and sedimentary rock, Quaternary drainage in-fills, and sedimentary veneers.

The Project site is underlain by undocumented artificial fills and young Quaternary alluvium. Elevations onsite range between approximately 81 feet to 85 feet above mean sea level, with a relative low point near the site's northeast corner. Existing site drainage is generally directed as sheet flow in the northeast direction and overflows into West Compton Boulevard and South Kemp Avenue's rights-of-way. Within West Compton Boulevard and South Kemp Avenue, two (2) existing catch basins capture and convey stormwater to an existing Los Angeles County Flood Control District (LACFCD) 66" storm drain facility, which flows in the easterly direction and outlets to the existing Compton Creek. Compton Creek drains to the existing Los Angeles River and, ultimately, the Pacific Ocean at San Pedro Bay.

Project Description

The Project consists of the construction of 60 townhomes with private garages, private drive aisles, sidewalks, guest parking areas, and common landscaped areas. The Project site will be accessible via two (2) entrances/exits along West 151st Street. The project is being built under an air space condominium map TM-82807.

The Project has been designed to provide housing for larger families with three (3) and four (4) bedroom floor plan designs. The design includes solar roofs, and the townhomes will be all-electric with no natural gas. Ten (10) of the units will be for moderate-income families, with the other fifty (50) units being market rate.

The Project includes the following discretionary approvals.

- GPA 21-001 – General Plan Map Amendment (GPA) – The amendment changes the land use designation on the subject property from Medium Density Residential (MDR) to General Commercial (GC).
- COZ 21-003 – Change of Zone (CZ) – Change of Zone changes the existing C-L – Limited Commercial & P – Automobile Parking Zones to the C-L – Limited Commercial Zone.
- CUP 21-008 – Conditional Use Permit (CUP) – Conditional Use Permit to permit a condominium development in the C-L – Commercial Limited Zone.
- TTM 21-001 – Tentative Tract Map 82807 – the map subdivides the 2.45-acres to create a single air space condominium map.

In addition, the following approvals will also be needed to process the project.

- Development Agreement – The agreement covers the details of the City's sale of the land known as Assessor's Parcel Number (APN) 6161-001-902 to City Ventures to develop sixty (60) single-family townhomes.
- Density Bonus – Parking Ratio – Tandem Parking pursuant to Government Code Section 65915 (p) (5) a development providing affordable units may provide onsite parking through tandem parking.
- Undergrounding Exemption – The requested exemption regards the undergrounding of utilities on West Compton Boulevard pursuant to Chapter 26 – Undergrounding of Utilities Facilities of the Municipal Code.
- Street Tree Removal – The request to remove the seven (7) mature street trees on West Compton Boulevard should pursuant to Section 30-43.7 – Removal of Landscaping or Trees of the Municipal Code.

GPA 21-001 – General Plan Map Amendment (GPA) – (Figure B – General Plan)

The underlying General Plan designation of MDR – Medium-Density Residential is inconsistent with the existing zoning of C-L – Commercial Limited and P – Parking. To create consistency with the General Plan and the Zoning designation of C-L – Commercial Limited while permitting a 60-unit townhome condominium Project the applicant is proposing to change the General Plan land use designation to General Commercial.

The General Commercial (1.00 FAR maximum) category allows for a wide range of retail and service commercial uses designed to meet communitywide and subregional shopping and service needs. Typical permitted uses include retail businesses, personal service establishments, food and beverage sales, hotels and motels, automotive sales, and repair businesses, as well as low-intensity professional offices and financial institutions. Any use permitted in the Medium-Density and High-Density Residential categories is also allowed in General Commercial.

Since the High-Density Residential General Plan land use designation permits 17.1 to 34 du/acre net, the General Commercial land use designation is an appropriate designation for this Project, which proposes 24.5 du/acre.

COZ 21-003 – Change of Zone (CZ) – (Figure C – Zoning)

The Project proposes to change the existing C-L – Limited Commercial & P – Automobile Parking Zones to the C-L – Limited Commercial Zone. The Limited Commercial Zone (C-L) is established to provide neighborhood, community, and regional retail business areas with related uses.

CUP 21-003 – Conditional Use Permit (CUP) – (Figure E – Conceptual Site Plan)

In the C-L Zone, specific uses are permitted subject to a CUP obtained pursuant to the provisions of Section 30-26 – Conditional Use Permits (CUP) of the City's Municipal Code. permitted with a CUP. Therefore, this Project is being processed under a CUP.

The development proposes sixty (60) townhome units with private garages, private drive aisles, sidewalks, guest parking areas, and common and private landscaped areas. The Project site will utilize two driveways off West 151st Street.

The Project has eight (8) three-story buildings, including four (4) ten-plexes and four (4) five-plexes. There are two plan types: Plan 1 at 1,404-square-feet and Plan 2 at 1,664-square-feet. Plan 1 has a two-car tandem parked private garage on the 1st floor and livable space on the 2nd and 3rd floors. Plan 2 has a two-car side-by-side parked private garage plus livable space on the 1st floor and livable space on the 2nd and 3rd floors. Second and third-floor living spaces for both units will further benefit from private outdoor decks (see Figures F through I).

The building's architectural style is "Transitional," blending both Traditional and Contemporary styles. Exterior façade materials are composed of a stucco field with board & batten siding accents. The roof level is distinguished by a perimeter, asphalt shingled hip roof punctuated with projecting gables and parapets. Architectural accents include aesthetically placed wood trellises, wood guardrails, bracket-supported awning roofs, and contemporary coach lights (see Figures F through I).

Product Information			
Building Type	**Building Size**	**Unit Area**	**Unit Design**
10-plex	15,340 sq. ft.		
Plan 1		1,404 sq. ft.	3 bedrooms 3 baths
Plan 2		1,664 sq. ft.	4 bedrooms 4 baths
5-plex	7,540 sq. ft.		
Plan 1		1,404 sq. ft.	3 bedrooms 3 baths
Plan 2		1,664 sq. ft.	4 bedrooms 4 baths

TTM 21-001 – Tentative Tract Map 82807 – (Figure D – TTM-82807)

The map proposes to subdivide the property into a single air space condominium lot for townhome purposes. On-site streets will be provided as easements.

Development Agreement

The City and City Ventures are entering into a Development Agreement that will provide the details of the City's sale of the land to City Ventures to develop a sixty (60) unit, townhome air space condominium Project.

Density Bonus – Parking Ratio – Tandem Parking

Although the applicant is not requesting a density increase under Density Bonus Law (Government Code 65915) they are providing ten units affordable to moderate income families and are requesting to utilize the tandem parking provision of Density Bonus Law pursuant to Government Code Section 65915 (p) (5). As noted in 65915 (f) the definition of "Density Bonus" for the purpose of the law does not require the increase in density.

Undergrounding Exemption

SCE has overhead transmission lines on four (4) 80-foot-tall poles along the West Compton Boulevard frontage of the Project site. These poles hold sixteen (16) different lines at six (6) different heights on the poles ranging from 12kV to 66kV and including lines for AT&T and Charter. The lines extend to the east and west of the Project site along West Compton Boulevard. All other utilities are underground.

The developer is requesting an exemption from the undergrounding of utilities requirement pursuant to Chapter 26 – Undergrounding of Utilities Facilities of the Municipal Code.

Street Tree Removal

Seven (7) mature trees exist in the right-of-way on West Compton Boulevard. The trees include five (5) Ficus (Moraceae) and two (2) Jacaranda mimosifolia trees. The developer proposes to replace the trees with 36" box trees at a one-to-three (1:3) ratio. The developer is seeking approval to remove the damaged tree(s) in accordance with Section 30-43.7 – Removal of Landscaping or Trees of the Municipal Code.

Construction Characteristics

Construction activities within the Project area will consist of on-site grading, building, paving, and architectural coating. Per the Project-specific scoping agreement (TJW Engineering, Inc.), the Project is to be operational in 2022; therefore, construction is estimated to start no sooner than February 2022.

Proposed site drainage will be collected and conveyed by two (2) proposed curb-inlet catch basins and an area drain system to two (2) proposed underground

detention systems, which will discharge to the existing LACFCD 66" storm drain at two (2) points of connection. Low flows will be directed to proposed Modular Wetlands System (MWS) Biofiltration Vaults for water quality treatment prior to entering the proposed detention systems. During larger storm events, stormwater runoff will bypass the treatment systems and be conveyed directly to the proposed detention system. The detention system will be equipped with an orifice to mitigate the peak discharge rate to the allowable peak flow rate (Allowable Q) provided Los Angeles County Department of Public Works (LACDPW). Excess flows will be temporarily detained as they are released at the Allowable Q. Refer to Appendix H of the Preliminary Hydrology and Hydraulics Study for the Allowable Q provided by LACFCD.

Although the property is relatively flat, the Project will export approximately 4,320 cubic yards of dirt in approximately 308 truckloads. Required street improvements will include the following:

- There will be new sidewalk installed on Compton Boulevard, South Kemp Avenue and Dwight Avenue.
- Curb and gutter will remain unless damaged and directed to be replaced for Compton Boulevard, Dwight Avenue and South Kemp Avenue.
- West 151st Street will receive new curb, gutter and sidewalk.
- There will be new curb returns and curb ramps installed at all four corners of the Project.

The Project includes preliminary grading, drainage, and water quality management plans.

12. **Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?** Note: Conducting consultation early in the CEQA process allows tribal governments, lead agencies, and project proponents to discuss the level of environmental review, identify and address potential adverse impacts to tribal cultural resources, and reduce the potential for delay and conflict in the environmental review process. (See Public Resources Code section 21080.3.2.) Information may also be available from the California Native American Heritage Commission's Sacred Lands File per Public Resources Code section 5097.96 and the California Historical Resources Information System administered by the California Office of Historic Preservation. Please also note that Public Resources Code section 21082.3(c) contains provisions specific to confidentiality.

Pursuant to California Public Resources Code §21080.3.1(Assembly Bill (AB) 52 of 2014), which requires local governments to conduct meaningful consultation with California Native American tribes that have requested to be notified by lead agencies of proposed projects in the geographic area with which the tribe is traditionally and culturally affiliated, the City is requesting to conduct AB 52 tribal consultation with your tribe. It is understood that the time allotted for a Native American Tribe to respond to a lead agency and request consultation in writing was recently extended by an additional 30-days in California Public Resources Code §21080.3.1, for a total of 60-days for any housing development project application, determined to be complete on or after March 4, 2020, and before December 31, 2021, under Assembly Bill 1561 approved by the Governor September 28, 2020.

In addition, the Project includes a General Plan Land Use Map change and, therefore, must also comply with California Public Resources Code §65352.3 - 65352.4 (Senate Bill (SB) 18), which requires local governments to conduct meaningful consultation with California Native American tribes on the contact list maintained by the Native American Heritage Commission prior to the adoption or amendment of a city or county general plan to protect Native American cultural places on lands that may be affected by the proposal.

Consultation under AB 52 and SB 18 commenced on April 19, 2021, with six (6) tribes.

- Gabrieleno Band of Mission Indians - Kizh Nation
- Gabrieleno/Tongva San Gabriel Band of Mission Indians
- Gabrielino/Tongva Nation
- Gabrielino Tongva Indians of California Tribal Council
- Gabrielino Tongva Tribe
- Soboba Band of Luiseño Indians

The 60-day response period for AB 52 will end on June 18, 2021. The 90-day response period for SB 18 will end on July 19, 2021. The City will consult with all tribes requesting a consultation and will coordinate the appropriate mitigation if any.

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☐ Aesthetics	☐ Agriculture & Forestry Resources	☐ Air Quality
☐ Biological Resources	☐ Cultural Resources	☐ Energy
☐ Geology & Soils	☐ Greenhouse Gas Emissions	☐ Hazards & Hazardous Materials
☐ Hydrology & Water Quality	☐ Land Use & Planning	☐ Mineral Resources
☐ Noise	☐ Population & Housing	☐ Public Services
☐ Recreation	☐ Transportation	☐ Tribal Cultural Resources
☐ Utilities & Service Systems	☐ Wildfire	☐ Mandatory Findings of Significance

DETERMINATION (To be completed by the Lead Agency):

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☒ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Signature	Date
Robert Degadillo, City Project Planner	City of Compton
Printed Name	For

EVALUATION OF ENVIRONMENTAL IMPACTS:

1) A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a Lead Agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.

3) Once the Lead Agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect is significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.

4) Less Than Significant with Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less than Significant Impact." The Lead Agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from Section XVII, "Earlier Analyses," may be cross-referenced).

5) Earlier analyses may be used where, pursuant to the tiering, program EIR, or another CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:

    a) Earlier Analyses Used. Identify and state where they are available for review.
    b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
    c) Mitigation Measures. For effects that are "Less than Significant with Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.

6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.

7) Supporting Information Sources. A source list should be attached, and other sources used, or individuals contacted should be cited in the discussion.

8) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.

9) The explanation of each issue should identify:

   a) the significance criteria or threshold, if any, used to evaluate each question; and
   b) the mitigation measure identified, if any, to reduce the impact to less than significance.

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
I. AESTHETICS – Except as provided in Public Resources Code Section 21099 – Modernization of Transportation Analysis for Transit-Oriented Infill Projects – **Would the project:**				
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☒	☐

Response:

The Project site is relatively flat, vacant, and surrounded by urban development. The proposed three-story residential buildings will complement the surrounding area and will not affect a scenic vista.

The City has evaluated the Project against City standards. The Project has been found, as conditioned, to meet all standards. Therefore, the Project will have a **less than significant impact,** directly, indirectly, or cumulatively on scenic vistas.

b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☒	☐

Response:

The site is bounded by West Compton Boulevard to the north, South Kemp Avenue to the east, South Dwight Avenue to the west, and West 151st Street to the south. Curb, gutter, and sidewalk already exist on West Compton Boulevard, South Kemp Avenue, and South Dwight Avenue. As well, seven (7) mature trees exist in the right-of-way on West Compton Boulevard. The trees include five (5) Ficus (Moraceae) and two (2) Jacaranda mimosifolia trees. These trees will be removed during Project construction and replaced with 36" box trees. There will be a one-to-one (1:3) ratio of replacement for each tree. The provisions of Section 30-43.7 – Removal of Landscaping or Trees of the Municipal Code will be followed.

Per a review of the CalTrans Scenic Highways Program, no state scenic highways exist in the City of Compton. However, several roadway corridors were highlighted for improvement by the City through design guidelines and regulations, public investment, and private incentives under the 1998 Corridor Improvement Plan. Compton Boulevard is one (1) of these corridors. The City Public Works Department is currently working on the Compton Boulevard Street Design Project, which covers Compton Boulevard between the east and the west City limits. The Public Works Department has reviewed the Project design for consistency with this program.

City staff will ensure that the Project is designed consistent with the City's requirements and the surrounding area. Therefore, the Project will have a **less than significant impact,** directly, indirectly, or cumulatively, on scenic resources within a state or City designated scenic highway/corridor.

c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☒	☐

Response:

The Project is in an urbanized area and has been designed to meet all applicable zoning requirements and other City regulations governing scenic quality. Therefore, the Project will have a **less than significant impact,** directly, indirectly, or cumulatively, on the existing visual character.

d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☒	☐	☐

Response:

To reduce impacts related to light pollution, the City requires that all developments introducing new light sources, or modifications to existing light sources, to shield all such devices. An exterior lighting plan has been submitted to City for approval. A photometric study and manufacturer's cut sheets of all exterior

lighting on the buildings, landscaped areas, and parking lots was submitted with the exterior lighting plan. All on-site lighting provides a minimum intensity of one-foot-candle at ground level and maximum intensity of ten-foot-candles at ground level throughout the areas serving the public and used for parking, with a ratio of average light to minimum light of four-to-one (4:1). The light sources are shielded to minimize off-site glare, and do not direct light skyward, and are to be directed away from adjacent properties and public rights-of-ways. Lights proposed to be mounted on buildings will be down-lights.

The proposed buildings are designed using an earth tone palette, and the site will include landscaping. Therefore, glare from the buildings should be minimal. Mitigation Measure, **MM AES-1,** will ensure that glare is not a potential issue.

As designed, conditioned, and mitigated, the impacts of lighting and glare will be **less than significant with mitigation,** directly, indirectly, and cumulatively.

MM AES-1: Prior to building permit issuance, the developer shall ensure that the design of the buildings shall reduce the number of reflective surfaces used in the construction to minimize new sources of glare. Exterior building materials shall use earth tone light colors with low reflectance. Any bare metallic surfaces found on infrastructures such as pipes and poles shall be painted to minimize reflectance and glare.

II.	**AGRICULTURE AND FOREST RESOURCES –** In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest protocols adopted by the California Air Resources Board. – **Would the project:**				
a)	Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒

Response:

The subject site is "*not mapped*" on the Farmland Mapping and Monitoring Program. The "*not mapped*" designation means an area that falls outside of the California Department of Conservation soil survey.

The adjacent properties on all four sides are developed with single-family residential and commercial uses making agricultural uses on the subject site problematic. Development, particularly residential development, can make farming more difficult or costly due to conflicts between non-agricultural and agricultural activities. For example, residents may complain about noise, dust, odors, and low-flying aircraft used to dust or spray crops. Increased restrictions on agriculture processes and other aspects of encroachment on agricultural areas can lower productivity, increase costs, and otherwise impair agricultural operations. The site has been vacant since at least 2005 and was used for a convalescent hospital prior to that time between 1977 and 2005. It is noted that the site was used for light agricultural purposes

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
between 1928 and 1963. Therefore, the Project will have **no impact,** directly, indirectly, or cumulatively on farmland.				
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
Response: The City is primarily an urban environment with no agricultural land under commercial cultivation. The Residential Agriculture (R-A) zoned areas in the City permit private and commercial field crops, orchards, horticultural nurseries, and similar agricultural uses. However, the subject site is zoned C-L and P and is proposed to be zoned R-M-SP-1. These zones do not permit agricultural uses. As well, the site is not subject to a Williamson Act Contract. Therefore, the Project will have **no impact,** directly, indirectly, or cumulatively, on zoning for agricultural use or on a Williamson Act contract.				
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?	☐	☐	☐	☒
Response: In Southern California, including the City of Compton, climate and topography limit the types and locations of forest lands and their potential for commercial or industrial timber utilization. Accordingly, there is no existing or currently proposed zoning of forest land, timberland, or Timberland Production Zones within the City. Therefore, the Project would not conflict with the existing zoning for, or cause rezoning of, forest land, timberland, or timberland zoned Timberland Production. The Project will have **no impact,** directly, indirectly, or cumulatively.				
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
Response: There is no commercial forestry or timber production industry within the City. Therefore, the Project would not result in the loss of forest land or the conversion of forest land to a non-forest use. The Project will have **no impact,** directly, indirectly, or cumulatively.				
e) Involve other changes in the existing environment which, due to their location or nature, could result in the conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒
Response: As previously indicated, the Project site has not been used for agricultural purposes since 1977 and due to the adjacent residential and commercial uses. Agricultural uses on this site would be problematic. Therefore, the Project would not result in the conversion of farmland to non-agricultural use and will have **no significant impact,** directly, indirectly, or cumulatively.				
Sources: 1. Compton General Plan Vision 2010, adopted December 3, 1991 2. Chapter 30 – Zoning of the Compton Municipal Code 3. California Department of Conservation Important Farmland Finder, accessed September 12, 2019				
III. AIR QUALITY – Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. **Would the project:**				
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐
Response:				

An Air Quality and Greenhouse Gas Impact Study was prepared for the Project by MD Acoustics. The results follow below.

The SCAQMD CEQA Handbook states that "New or amended General Plan Elements (including land-use zoning and density amendments), Specific Plans, and significant projects must be analyzed for consistency with the AQMP." Strict consistency with all aspects of the plan is usually not required. A proposed project should be consistent with the AQMP if it furthers one or more policies and does not obstruct other policies. The SCAQMD CEQA Handbook identifies two key indicators of consistency:

(1) Whether the project will result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay timely attainment of air quality standards or the interim emission reductions specified in the AQMP.

(2) Whether the project will exceed the assumptions in the AQMP in 2016 or increments based on the year of project buildout and phase.

Both of these criteria are evaluated in the following sections.

A. Criterion 1 - Increase in the Frequency or Severity of Violations

Based on the air quality modeling analysis in the Compton Residential Development Air Quality and Greenhouse Gas Impact Study, neither short-term construction impacts nor long-term operations will result in significant impacts based on the SCAQMD regional and local thresholds of significance.

Therefore, the proposed Project is not projected to contribute to the exceedance of any air pollutant concentration standards and is found to be consistent with the AQMP for the first criterion.

B. Criterion 2 - Exceed Assumptions in the AQMP?

Consistency with the AQMP assumptions is determined by performing an analysis of the proposed Project with the assumptions in the AQMP. The emphasis of this criterion is to ensure that the analyses conducted for the proposed Project are based on the same forecasts as the AQMP. The 2016-2040 Regional Transportation/Sustainable Communities Strategy, prepared by SCAG, 2016, includes chapters on: the challenges in a changing region, creating a plan for our future, and the road to greater mobility and sustainable growth. These chapters currently respond directly to federal and state requirements placed on SCAG. Local governments are required to use these as the basis of their plans for consistency with applicable regional plans under CEQA. For this Project, the City of Compton Land Use Plan defines the assumptions represented in the AQMP.

The proposed Project is currently zoned as Limited Commercial (C-L) and Parking (P). It has a land-use classification of Medium Density Residential (8.1-17.0 dwelling units per acre) in the City of Compton General Plan. The Project includes a General Plan Amendment to General Commercial (GC) and a Change of Zone to Limited Commercial Zone (C-L). The Project proposes developing the approximately 2.45-acre Project site with 60 single-family (attached) townhomes at 24.5 dwelling units per acre. Therefore, the proposed Project is not currently consistent with the existing land use designation and zoning.

The General Commercial (1.00 FAR maximum) category allows for a wide range of retail and service commercial uses designed to meet communitywide and sub-regional shopping and service needs. Typical permitted uses include retail businesses, personal service establishments, food and beverage sales, hotels and motels, automotive sales, and repair businesses, as well as low-intensity professional offices and financial institutions. Any use permitted in the Medium-Density and High-Density Residential categories is also allowed in General Commercial. The High-Density Residential General Plan land use designation permits 17.1 to 34 dwelling units per net acre; therefore, as the Project proposes 24.5 dwelling units per acre, it would be consistent with the proposed General Commercial land use designation.

Therefore, once the General Plan Amendment and Change of Zone are approved, the Project would be consistent with the City's land use and zoning designations. Although the Project may initially result in an inconsistency with the AQMP on paper, the inconsistency would not necessarily constitute a conflict

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact

with the AQMP. The SCAQMD acknowledges that strict consistency with all aspects of the AQMP is not required in order to make a finding of no conflict. Instead, a project is considered consistent with the AQMP if it furthers one or more policies and does not obstruct other policies. The Project would implement contemporary energy-efficient technologies and regulatory/operational programs required per Title 24, CalGreen, and City standards. Generally, compliance with SCAQMD emissions reductions and control requirements also act to reduce project air pollutant emissions. Project compliance with regulatory/operational programs is consistent with and supports overarching AQMP air pollution reduction strategies. Project support of these strategies promotes timely attainment of AQMP air quality standards and would bring the Project into conformance with the AQMP. Therefore, the proposed Project is not anticipated to exceed the AQMP assumptions for the Project site and is found to be consistent with the AQMP for the second criterion.

Based on the above, the proposed Project will not result in an inconsistency with the SCAQMD AQMP. Therefore, a **less than significant impact** will occur on the SCAQMD AQMP directly, indirectly, or cumulatively.

b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☒	☐

Response:

Cumulative projects include local development as well as general growth within the Project area. However, as with most development, the greatest source of emissions is from mobile sources, which travel well out of the local area. Therefore, from an air quality standpoint, the cumulative analysis would extend beyond any local projects and, when wind patterns are considered, would cover an even larger area. Accordingly, the cumulative analysis for the Project's air quality must be generic by nature.

The Project area is out of attainment for both ozone and PM10 particulate matter. Construction and operation of cumulative projects will further degrade the local air quality and the air quality of the South Coast Air Basin. The greatest cumulative impact on the quality of regional air cell will be the incremental addition of pollutants mainly from increased traffic from residential, commercial, and industrial development and the use of heavy equipment and trucks associated with the construction of these projects. Air quality will be temporarily degraded during construction activities that occur separately or simultaneously. However, in accordance with the SCAQMD methodology, projects that do not exceed the SCAQMD criteria or can be mitigated to less than criteria levels are not significant and do not add to the overall cumulative impact. The Project does not exceed any of the thresholds of significance and therefore is considered **less than significant**.

c) Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☒	☐

Response:

Construction Air Quality Emissions Impact

The latest version of CalEEMod was used to estimate the onsite and offsite construction emissions. The emissions incorporate Rule 402 and 403. Rule 402 and 403 (fugitive dust) are not considered mitigation measures as the Project by default is required to incorporate these rules during construction.

Regional Significance Thresholds for Construction Emissions

The following CEQA significance thresholds for construction emissions are established for the Basin:

- 75 pounds per day (lbs/day) of VOC
- 100 lbs/day of NOx
- 550 lbs/day of CO
- 150 lbs/day of PM10
- 55 lbs/day of PM2.5
- 150 lbs/day of SO2

Projects in the basin with construction-related emissions exceeding any of the emission thresholds are considered significant under SCAQMD guidelines.

Regional Construction Emissions

The construction emissions for the Project would not exceed the SCAQMD's daily emission thresholds at the regional level, as demonstrated in Table below, and therefore would be considered **less than significant**.

Regional Significance - Construction Emissions (pounds/day)

Activity	Pollutant Emissions (pounds/day)					
	VOC	NOx	CO	SO_2	PM10	PM2.5
Grading						
On-Site[2]	1.54	16.98	9.22	0.02	3.30	2.00

[2] On-site emissions from equipment operated on-site that is not operated on public roads.
[3] Off-site emissions from equipment operated on public roads.
[4] Construction, architectural coatings, and paving phases may overlap.

Regional Operational Emissions

The operations-related criteria air quality impacts created by the proposed Project have been analyzed using the CalEEMod model. The operating emissions were based on the year 2023, the anticipated opening year for the Project. The summer and winter emissions created by the proposed Project's long-term operations were calculated, and the highest emissions from either summer or winter are summarized in Table below.

Regional Significance - Unmitigated Operational Emissions (lbs/day)

Activity	Pollutant Emissions (pounds/day)[1]

Total Emissions	**3.01**	**4.28**	**15.45**	**0.05**	**3.34**	**1.00**
SCAQMD Thresholds	**55**	**55**	**550**	**150**	**150**	**55**
Exceeds Threshold?	No	No	No	No	No	No

Notes:
[1] Source: CalEEMod Version 2016.3.2
[2] Area sources consist of emissions from consumer products, architectural coatings, and landscaping equipment.
[3] Energy usage consists of emissions from on-site natural gas usage.
[4] Mobile sources consist of emissions from vehicles and road dust.

The table above provides the Project's unmitigated operational emissions. The table shows that the Project does not exceed the SCAQMD daily emission threshold and regional operational emissions are **less than significant**.

The Project does not exceed any of the thresholds of significance and, therefore, is considered **less than significant**.

Regional Significance Thresholds for Operational Emissions

The daily operational emissions significance thresholds for the basin are as follows:

- 55 pounds per day (lbs/day) of VOC
- 55 lbs/day of NOx
- 550 lbs/day of CO
- 150 lbs/day of PM10
- 55 lbs/day of PM2.5
- 150 lbs/day of SO2

Local Microscale Concentration Standards

The significance of localized project impacts under CEQA depends on whether ambient CO levels in the vicinity of the project are above or below State and federal CO standards. If ambient levels are below the standards, a project is considered to significantly impact if project emissions result in an exceedance of one or more of these standards. If ambient levels already exceed a State or federal standard, project emissions are considered significant if they increase 1-hour CO concentrations by 1.0 ppm or more or 8-hour CO concentrations by 0.45 ppm or more. The following are applicable local emission concentration standards for CO:

- California State 1-hour CO standard of 20.0 ppm
- California State 8-hour CO standard of 9.0 ppm

5.1.4 Thresholds for Localized Significance

Project-related construction air emissions may have the potential to exceed the State and Federal air quality standards in the project vicinity, even though these pollutant emissions may not be significant enough to create a regional impact on the South Coast Air Basin. To assess local air quality impacts, the SCAQMD has developed Localized Significant Thresholds (LSTs) to assess the project-related air emissions in the project vicinity. The SCAQMD has also provided Final Localized Significant Threshold Methodology (LST Methodology), June 2003, which details the methodology to analyze local air emission impacts. The Localized Significant Threshold Methodology found that the primary emissions of concern are NO2, CO, PM10, and PM2.5.

The emission thresholds were calculated based on the South-Central Los Angeles County source receptor area (SRA 12) and a disturbance of two acres per day at a distance of 25 meters (82 feet) for construction.

Localized Construction Emissions

The data provided in the table below shows that none of the analyzed criteria pollutants would exceed the local emissions thresholds at the nearest sensitive receptors. Therefore, a **less than significant** local air quality impact would occur from constructing the proposed Project.

Localized Significance – Construction

Phase	On-Site Pollutant Emissions (pounds/day)[1]			
	NOx	CO	PM10	PM2.5
Grading	16.98	9.22	3.30	2.00
Building Construction	14.60	14.35	0.70	0.67
Paving	8.61	11.68	0.43	0.40
Architectural Coating	1.30	1.81	0.07	0.07
Total of overlapping phases	24.52	27.85	1.21	1.14

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
SCAQMD Threshold for 25 meters (82 feet) or less[2]	**65**	**346**	**7**	**4**
Exceeds Threshold?	No	No	No	No

Notes:
[1] Source: Calculated from CalEEMod and SCAQMD's Mass Rate Look-up Tables for two acres in South Central Los Angeles County Source Receptor Area (SRA 12). Project will disturb a maximum of two acres per day (see Table 7 in the Air Quality and Greenhouse Impact Study).
[2] The nearest sensitive receptors are the multiple-family residential land uses located approximately 35 feet (~11 meters) southeast and 50 feet (~15 meters) east of the project site, and the single-family residential land uses located approximately 50 feet (~15 meters) south of the project site; however, according to LST methodology, any receptor located closer than 25 meters should be based on the 25-meter threshold.

Localized Operational Emissions

Project-related air emissions from on-site sources such as architectural coatings, landscaping equipment, on-site usage of natural gas appliances as well as the operation of vehicles on-site may have the potential to exceed the State and Federal air quality standards in the Project vicinity, even though these pollutant emissions may not be significant enough to create a regional impact to the Air Basin.

As stated previously, according to SCAQMD LST methodology, LSTs would apply to the operational phase of a project if the project includes stationary sources or attracts mobile sources (such as heavy-duty trucks) that may spend long periods queuing and idling at the site; such as industrial warehouse/transfer facilities. The proposed Project is a residential project and does not include such uses. Therefore, due to the lack of stationary source emissions, **no long-term localized significance threshold analysis is warranted.**

Construction-Related Toxic Air Contaminant Impact

The greatest potential for toxic air contaminant emissions would be related to diesel particulate emissions associated with heavy equipment operations during the proposed Project's construction. The Office of Environmental Health Hazard Assessment (OEHHA) has issued the Air Toxic Hot Spots Program Risk Assessment Guidelines and Guidance Manual for the Preparation of Health Risk Assessments, February 2015, to describe the algorithms, recommended exposure variates, cancer, and noncancer health values, and the air modeling protocols needed to perform a health risk assessment HRA) under the Air Toxics Hot Spots Information and Assessment Act of 1987. Hazard identification includes identifying all evaluated substances for cancer risk and/or non-cancer acute, 8-hour, and chronic health impacts. In addition, identifying any multi-pathway substances that present a cancer risk or chronic non-cancer hazard via non-inhalation routes of exposure.

Given the relatively limited number of heavy-duty construction equipment and construction schedule, the proposed Project would not result in a substantial long-term source of toxic air containment emissions and corresponding individual cancer risk. Furthermore, construction-based particulate matter (PM) emissions (including diesel exhaust emissions) do not exceed any local or regional thresholds. Therefore, **no significant short-term toxic air contaminant impacts would occur** during the construction of the proposed Project.

The Project will have a **less than significant impact** on the exposure of sensitive receptors to substantial pollutant concentrations.

d) Result in other emissions (such as those leading to odors adversely affecting a substantial number of people?	☐	☐	☐	☒

Response:

Potential sources that may emit odors during construction activities include the application of materials such as asphalt pavement. The objectionable odors produced during the construction process are short-term in nature. The odor emissions are expected to cease upon the drying or hardening of the odor-producing materials. Diesel exhaust and VOCs would be emitted during construction of the Project, which are objectionable to some; however, emissions would disperse rapidly from the Project site and therefore should not reach an objectionable level nearest sensitive receptors. Due to the short-term nature and limited amounts of odor-producing materials being utilized, **no significant impact** related to odors would occur during the proposed Project's construction.

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact

The SCAQMD recommends that odor impacts be addressed in a qualitative manner. Such an analysis shall determine whether the Project would result in excessive nuisance odors, as defined under the California Code of Regulations and Section 41700 of the California Health and Safety Code, and thus would constitute a public nuisance related to air quality.

Potential sources that may emit odors during the proposed Project's ongoing operations would include odor emissions from trash storage areas. Due to the distance of the nearest receptors from the Project site and through compliance with SCAQMD's Rule 402, **no significant impact** related to odors would occur during the proposed Project's ongoing operations.

IV. BIOLOGICAL RESOURCES – Would the project:

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒

Response:

The Project site is vacant and has been since 2005, with annual weed abatement taking place each year. As such, the site does not support habitat for any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations.

A review of the County of Los Angeles' Geographical Information System files on September 13, 2019, found that the Project site was not located in a biologically sensitive area or a Significant Ecological Area (SEA).

The Project will have **no impact** on habitat for any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations.

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒

Response:

The Project site is vacant and has been since 2005, with annual weed abatement taking place each year. As such, the site does not have any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or the California Department of Fish and Game or U.S. Fish and Wildlife Service will have **no impact** on these resources.

c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒

Response:

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
The Project site is vacant and has been since 2005, with annual weed abatement taking place each year. As such, the site does not have any state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) resources and, therefore, will have **no impact** on these resources.				
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with an established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☐	☒
Response: As noted above, the Project site does not support habitat or species and, therefore, will have **no impact** on established native resident or migratory wildlife corridors or impede the use of native wildlife nursery sites.				
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☐	☒
Response: The site is bounded by West Compton Boulevard to the north, South Kemp Avenue to the east, South Dwight Avenue to the west, and West 151st Street to the south. Curb, gutter, and sidewalk already exist on West Compton Boulevard, South Kemp Avenue, and South Dwight Avenue. As well, seven (7) mature trees exist in the right-of-way on West Compton Boulevard. The trees include five (5) Ficus (Moraceae) and two (2) Jacaranda mimosifolia trees. These trees will be replaced with 36" box trees at a one-to-one (1:3) ratio per the provisions of Section 30-43.7 – Removal of Landscaping or Trees of the Municipal Code. Los Angeles County does have SEA's throughout the County, but a review of the County of Los Angeles' Geographical Information System files on September 13, 2019, found that the Project site was not located in a biologically sensitive area or a SEA. The Project will have **no impact** on local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance				
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or another approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒
Response: As noted above, the Project site does not support habitat or species and, therefore, will have **no impact** on an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or another approved local, regional, or state habitat conservation plan.

Chapter 20 – Streets and Sidewalks of the Compton Municipal Code ➢ Section 20-4 – Street Trees 4. Los Angeles County General Plan 2008 ➢ Figure 6.3 - Significant Ecological Areas (SEAs)				
V. CULTURAL RESOURCES – Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?	☐	☐	☐	☒
Response: Historical and archaeological resources include the following:				

(1) A resource listed in or determined to be eligible by the State Historical Resources Commission, for listing in the California Register of Historical Resources (Pub. Res. Code, § 5024.1, Title 14 CCR, Section 4850 et seq.).

(2) A resource included in a local register of historical resources, as defined in section 5020.1(k) of the Public Resources Code or identified as significant in an historical resource survey meeting the requirements section 5024.1(g) of the Public Resources Code, shall be presumed to be historically or culturally significant. Public agencies must treat any such resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant.

(3) Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to be an historical resource, provided the lead agency's determination is supported by substantial evidence in light of the whole record. Generally, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the California Register of Historical Resources (Pub. Res. Code, § 5024.1, Title 14 CCR, Section 4852)

A review of the National Register of Historic Places Geographic Information System, the California Office of Historic Preservation Website, and the City's General Plan found that Compton is located on one of the oldest communities in Los Angeles County, dating back to 1784 when it was once a part of Rancho San Pedro. One of Compton's first homes, the Heritage House, was built in 1869 and is a State Historic Landmark.

Aerial photographs of the site dating back to 1928 are provided in the Phase I Environmental Site Assessment 930 Compton Boulevard – prepared by Stantec Consulting Services, Inc. A records review of aerial photography performed for the Phase I Environmental Site Assessment determined the Project site was used for light agricultural purposes between 1928 and 1963. Then by 1977, the property was developed with a convalescent hospital and associated parking. By 2005 the convalescent hospital had been demolished, and the property has been vacant ever since. Therefore, there will be **no impact** on the significance of a historical resource.

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	☐	☐	☐	☒

Response:

A review of the National Register of Historic Places Geographic Information System, the California Office of Historic Preservation Website, and the City's General Plan found that Compton is located on one of the oldest communities in Los Angeles County, dating back to 1784 when it was once a part of Rancho San Pedro. Archaeological sites exist in the City, but none are located in the area of the subject site. The site has been developed at one time with a convalescent hospital that has since been demolished. The disturbance of the property during this previous construction and demolition did not produce any archaeological resources. Therefore, there will be **no impact** on the significance of an archaeological resource.

c) Disturb any human remains, including those interred outside of formally dedicated cemeteries?	☐	☐	☒	☐

Response:

No cemeteries or human remains are known to occur on-site, and it is unlikely that human remains will be uncovered during Project development. Pursuant to CEQA Guidelines 15064.5 (e), in the event of the accidental discovery or recognition of any human remains in any location other than a dedicated cemetery, the following steps shall be taken:

(1) There shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until:

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact

(A) The coroner of the county in which the remains are discovered must be contacted to determine that no investigation of the cause of death is required, and

(B) If the coroner determines the remains to be Native American:

1. The coroner shall contact the Native American Heritage Commission within 24 hours.
2. The Native American Heritage Commission shall identify the person or persons it believes to be the most likely descended from the deceased Native American.
3. The most likely descendent may make recommendations to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains, and any associated grave goods as provided in Public Resources Code Section 5097.98, or

(2) Where the following conditions occur, the landowner or his authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity on the property in a location not subject to further subsurface disturbance.

(A) The Native American Heritage Commission is unable to identify a most likely descendent or the most likely descendent failed to make a recommendation within 24 hours after being notified by the commission.

(B) The descendant identified fails to make a recommendation; or

(C) The landowner or his authorized representative rejects the recommendation of the descendant, and the mediation by the Native American Heritage Commission fails to provide measures acceptable to the landowner.

Following the requirements of CEQA Guidelines, 15064.5 (e) will ensure that if human remains are discovered, they will be handled appropriately. Therefore, the Project will have a **less than significant impact** on human remains.

VI. ENERGY – Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☒	☐

Response:

Construction of the sixty (60) townhomes would require the typical use of energy resources. Energy would be consumed during site clearing, excavation, grading, and construction. The construction process would be typical. No site conditions or Project features would require an inefficient or unnecessary consumption of energy. The Project has been designed in compliance with California's Energy Efficiency

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact

Standards and 2019 CALGreen Standards (which go into effect on January 1, 2020). These measures include:

- Homes will include Solar and will be all-electric, no natural gas;
- Stormwater drainage and retention during construction;
- Water Conservation;
- Compliance with the City's Landscape & Irrigation Ordinance;
- Construction Site Maintenance and Trash Containment;
- Stormwater/Urban Runoff Management and Discharge Control;
- Air Pollution Reduction;
- Solid Waste Management; and
- All other mandatory CalGreen requirements for residential development.

The operation of the proposed residential units would involve energy for heating, cooling, and equipment operation. These facilities would comply with all applicable California Energy Efficiency Standards and 2019 CALGreen Standards.

Neither the construction nor operation of the Project would result in wasteful, inefficient, or unnecessary consumption of energy or wasteful use of energy resources. Therefore, impacts related to wasteful energy use would be **less than significant**, directly, indirectly, or cumulatively.

b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☒	☐

Response:

As noted above, the Project has been designed in compliance with California's Energy Efficiency Standards and 2019 CALGreen Standards. The Project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency; therefore, impacts would be **less than significant**, directly, indirectly, or cumulatively.

VII. GEOLOGY AND SOILS – Would the project:

a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving:

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☒	☐

Response:

Alta California Geotechnical Inc. performed a geotechnical investigation of the property to examine the existing on-site geotechnical conditions and assess the impacts that the geotechnical conditions may have on the proposed development.

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact

Several large, active fault systems, including the Whittier-Elsinore, the Newport-Inglewood, and the San Andreas, occur in the region surrounding the site. These fault systems have been studied extensively and, in large part, control the geologic structure of southern California.

The subject site is located in southern California, which is a tectonically active area. The type and magnitude of seismic hazards affecting a site are dependent on the distance to the causative fault and the intensity and magnitude of the seismic event. The seismic hazard may be primary, such as surface rupture and/or ground shaking, or secondary, such as liquefaction and/or ground lurching.

The site is located on the Santa Ana sub-block, approximately 1.3 miles east of the Newport-Inglewood fault zone, 4.9 miles southwest of the Puente Hills fault zone, 9.1 miles north Of the Palos Verdes fault zone, 11.3 miles south of the Elysian Park fault zone, and 13.1 miles southwest of the Whittier-Elsinore fault zone.

Surface Rupture

Active faults are not known to exist within the Project area. A review of Special Publication 42 indicates the site is not within a California State designated Alquist-Priolo earthquake fault zone. Accordingly, the potential for fault surface rupture on the subject site is very low.

Based on this analysis, compliance with an approved Geotechnical report, the California Building Code, and the City of Compton Municipal Code will ensure that risks associated with primary surface ground rupture should be considered "low." Therefore, the potential hazards associated with fault rupture are considered **less than significant,** directly, indirectly, and cumulatively.

ii) Strong seismic ground shaking?	☐	☐	☒	☐

Response:

Ground shaking hazards caused by earthquakes along other active regional faults do exist. The 2016 California Building Code requires use-modified spectral accelerations and velocities for most structural designs.

The site has been identified as a "D" site class in accordance with section 1613.3.2 of the CBC 2016. Utilizing this information, the computer program ATC Hazards by Location and ASCE 7-10 criterion, the spectral response accelerations that can be utilized for the Project are presented in Figure 1 of the Geotechnical Report. The structural engineer should verify these parameters. Additional parameters should be determined by the structural engineer based on the Occupancy Category of the proposed structures.

Based on this analysis, compliance with an approved Geotechnical report, California Building Code, and the City of Compton Municipal Code will ensure that risks associated with ground shaking are considered **less than significant,** directly, indirectly, and cumulatively.

iii) Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐

Response:

Seismic agitation of relatively loose saturated sands, silty sands, and some silts can result in a buildup of pore pressure. If the pore pressure exceeds the overburden stresses, a temporary quick condition known as liquefaction can occur. Liquefaction effects can manifest in several ways, including 1) loss of bearing; 2) lateral spread; 3) dynamic settlement; and 4) flow failure. Lateral spreading has typically been the most damaging mode of failure.

The more recent sediment has been deposited, the more likely it will be susceptible to liquefaction. Other factors that must be considered are groundwater, confining stresses, relative density, and the intensity and duration of seismically induced ground shaking.

Groundwater was not encountered during the geotechnical subsurface investigation at a depth approximately 51.5 feet below the ground surface. The regional groundwater map indicates that the historic-

high groundwater level is 10 feet below the ground surface (CDMG, 1997). The site is located in a liquefaction zone per the seismic hazard maps (CDMG, 1997).

Alta performed a liquefication analysis utilizing data from the hollow stem auger borings and laboratory test results to analyze the liquefaction potential of the young Quaternary alluvium. A description of Alta's analysis and calculations is presented in Appendix E of the Geotechnical Report. A groundwater level of 10 feet below the existing ground surface was assumed. Alta's findings are discussed below under the headings of the specific types of liquefaction, which can be manifested during seismic shaking.

Loss of Bearing:

Liquefaction can potentially cause foundation bearing failure due to ground softening and near-failure in bearing. Based on the removal recommendations presented in the geotechnical Report, Alta anticipates that the potential for loss of bearing will be minimal.

Lateral Spreading:

The lateral displacement of surficial blocks of sediment can occur due to liquefaction in a subsurface layer. The most pervasive forms of lateral spreading typically involve sites located near a "free-face" (large slopes, channels, etc.); however, it has been noted that lateral spreading can occur on sites with gently sloping (1% or more) ground, such as the subject site.

Determination of the potential for lateral spread is based on the presence of continuous potentially liquefiable soil layers underneath the structures, the presence of lateral confinement, and various analyses such as empirical modeling. Bartlett, Hansen, and Youd (2002) states that surface manifestation of lateral spread is typically limited to sites with liquefiable soils within 10 meters (32 feet) of grade and that sites underlain by soils with (N1)60 values 15 and greater do not experience significant displacements from earthquakes with magnitudes less than 8.

There were no layers within 32 feet of the existing ground surface with (Nl)Go values less than 15 that are susceptible to liquefaction. As such, it is Alta's opinion that the potential for lateral spread to occur onsite is considered minimal upon the completion of remedial grading.

Settlement:

Settlement due to seismic shaking can occur due to both liquefaction of saturated sediments or rearrangement of dry sand particles. Alta's liquefaction analysis was performed utilizing SPT from the hollow-stem auger borings and laboratory test results to analyze the potential amount of settlement. A description of Alta's analysis and calculations are presented in Appendix E of the Geotechnical Report. The calculations indicated that the potential amount of dynamic settlement is less than 1-inch. Dynamic settlement design recommendations are presented in Section 7.1 of the Geotechnical Report.

Flow Failure:

Due to the relatively flat nature of the site and the relatively horizontal deposition of the underlying deposits, the potential for flow failure onsite is considered low.

Implementation of existing state and local laws and regulations concerning soil liquefaction and ground failure is required of all projects in the City. Therefore, impacts related to liquefaction and ground failure would be **less than significant,** directly, indirectly, and cumulatively**.**

iv) Landslides?	☐	☐	☐	☒

Response:

The site is situated on relatively level ground and is not immediately adjacent to any slopes or hillsides that could be potentially susceptible to slope instability. No signs of slope instability in the form of landslides, rockfalls, earth flows, or slumps were observed at or near the subject site during Alta's

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
investigation. As such, risks associated with slope instability should be considered "negligible." Therefore, there will be **no impacts** related to landsliding and slope failure**,** directly, indirectly, and cumulatively**.**				
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
Response: Erosion is a large-scale impact caused by human activity and disturbance of surface soil, wind, and water. Erosion cannot be eliminated, although existing regulations such as the CBC (which includes erosion control measures and best management practices) and NPDES permit requirements can reduce the potential impacts of erosion. No signs of erosion were observed during Alta's field investigation. Risks associated with flooding and erosion should be evaluated and mitigated by the project design Civil Engineer. The Project does propose to export approximately 4,320 cubic yards of soil. No import of soil is expected. Adherence to state and local regulations will reduce impacts related to erosion to **less than significant**, directly, indirectly, and cumulatively.				
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☐	☒	☐
Response: See Responses VII a iii and iv above, and d below for additional information. Adherence to the recommendations of the geotechnical investigation will ensure that the Project will have a **less than significan**t impact on on-site or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse either directly, indirectly, or cumulatively.				
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☐	☐	☒	☐
Response: Expansive soils contain certain types of clay minerals that shrink or swell as the moisture content changes; the shrinking or swelling can shift, crack, or break structures built on such soils. Arid or semi-arid areas with seasonal changes of soil moisture experience a much higher frequency of problems from expansive soils than areas with higher rainfall and more constant soil moisture. The California Building Code (CBC) 2016, Volume 2, Chapter 18, Division 1 Section 1803.2 mandates that special foundation design consideration is employed if the soil expansion Index is 20 or greater in accordance with Table 18-1-B. The methodology and scope for a geotechnical investigation are described in UBC Section 1803 and require assessing various factors, such as slope stability, soil strength, adequacy of load-bearing soils, the presence of compressible or expansive soils, and the liquefaction potential. The required content of the geotechnical report includes recommendations for foundation type and design criteria. These recommendations can include foundation design provisions intended to mitigate the effects of expansive soils, liquefaction, and differential settlement. In general, mitigation can be accomplished by combining ground modification techniques (i.e., stone columns, reinforcing nails and anchors, deep soil mixing, etc.), selecting an appropriate foundation type and configuration, and using appropriate building/foundation structural systems. Section 1804.5 Excavation, Grading, and Fill require the preparation of a geotechnical report where a building will be constructed on compacted fill. The International Building Code (IBC) replaced earlier regional building codes (including the Uniform Building Code) in 2000 and established consistent construction guidelines for the nation. In 2006, the IBC was incorporated into the 2007 California Building Code (CBC) and currently applies to all structures being constructed in California. The national model codes are therefore incorporated by reference into				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact

the building codes of local municipalities. The CBC includes building design and construction criteria that take into consideration the State's seismic conditions.

Through adherence to state and local seismic and structural regulations (i.e., California Seismic Hazards Mapping Act, California Building Code, Compton Municipal Code, and the NPDES Permit Requirements), the impacts of expansive soils will be **less than significant**, directly, indirectly, or cumulatively.

e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	☐	☐	☐	☒

Response:

The Project will be served by the Los Angeles County Sanitation District (LACSD) sewer infrastructure. C&V Consulting, Inc. has prepared a Sewer Area Study. The existing sewer system analyzed in the area study has a design capacity above the calculated cumulative flow. The peak discharge at the downstream end of the sewer system 15" pipe entering the County Sanitation District No. 1 existing 31.3" sewer trunk main is calculated to be a rate of 1.8465 cfs with a flow depth of 7.61 inches. Refer to Appendix B of the Sewer Area Study for calculations and tabulated results. Therefore, it is concluded that the existing sewer system has adequate capacity for the proposed development.

Therefore, the Project will have **no impact,** directly, indirectly, or cumulatively in regard to septic systems, and the existing sewer system has adequate capacity for the proposed development.

f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☐	☐	☒

Response:

The Project site and the surrounding area, because of its artificial fill and alluvial geology, are not considered to be likely candidates for the discovery of paleontological resources. The likelihood of discovering such materials is also considered low due to the previous disturbance that has occurred on the site and the presence of fill materials. Therefore, the Project will not disturb any paleontological resources, and **no impacts** are anticipated.

VIII. GREENHOUSE GAS EMISSIONS – Would the project:

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☒	☐

Response:

An Air Quality and Greenhouse Gas Impact Study was prepared for the Project by MD Acoustics. The results follow below.

The greenhouse gas (GHG) emissions from Project construction equipment and worker vehicles are shown in the table below. The emissions are from all phases of construction. The total construction emissions amortized over 30 years are estimated at 24.54 metric tons of CO2e per year. Annual CalEEMod output calculations are provided in Appendix B of the Air Quality and Greenhouse Gas Impact Study.

Construction Greenhouse Gas Emissions

Activity	Emissions ($MTCO_2e$)[1]		
	Onsite	Offsite	Total
Grading	9.1	0.5	9.6
Building Construction[2]	480.0	225.7	705.7
Paving	15.6	1.4	17.0
Coating	2.6	1.2	3.8
Total	507.3	228.8	736.1
Averaged over 30 years[2]	17	8	24.54

Notes:
1. $MTCO_2e$=metric tons of carbon dioxide equivalents (includes carbon dioxide, methane, and nitrous oxide).
2. The emissions are averaged over 30 years because the average is added to the operational emissions, pursuant to SCAQMD.
* CalEEMod output (Appendix B of the Air Quality and Greenhouse Impact Study)

Operational Greenhouse Gas Emissions Impact

Operational emissions occur over the life of the project. The unmitigated operational emissions for the Project are 833.41 metric tons of CO2e per year, as shown in the table below. Therefore, the Project's GHG
emissions do not exceed the SCAQMD draft threshold of 3,000 metric tons CO2e per year for all land uses. Therefore, the proposed Project's GHG emissions are **less than significant**.

Opening Year Unmitigated Project-Related Greenhouse Gas Emissions

Category	Greenhouse Gas Emissions (Metric Tons/Year)[1]					
	Bio-CO2	NonBio-CO_2	CO_2	CH_4	N_2O	CO_2e
Area Sources[2]	0.00	13.98	13.98	0.00	0.00	14.08
Energy Usage[3]	0.00	133.38	133.38	0.00	0.00	133.98
Mobile Sources[4]	0.00	615.82	615.82	0.03	0.00	616.58
Solid Waste[5]	5.60	0.00	5.60	0.33	0.00	13.88
Water[6]	1.24	24.94	26.18	0.13	0.00	30.35
Construction[7]	0.00	24.45	24.45	0.00	0.00	24.54
Total Emissions	6.84	812.57	819.42	0.50	0.01	**833.41**
SCAQMD Draft Screening Threshold						**3,000**
Exceeds Threshold?						**No**

Notes:
[1] Source: CalEEMod Version 2016.3.2
[2] Area sources consist of GHG emissions from consumer products, architectural coatings, and landscape equipment.
[3] Energy usage consists of GHG emissions from electricity and natural gas usage.
[4] Mobile sources consist of GHG emissions from vehicles.
[5] Solid waste includes the CO_2 and CH_4 emissions created from the solid waste placed in landfills.
[6] Water includes GHG emissions from electricity used for transport of water and processing of wastewater.
[7] Construction GHG emissions based on a 30-year amortization rate.

b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emission of greenhouse gases?	☐	☐	☒	☐

Response:

The proposed Project would have the potential to conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases. The City of Compton does not currently have a Climate Action Plan; therefore, the Project has been compared to the goals of the CARB Scoping Plan and the GHG emissions reduction goal of SB-32.

Scoping Plan

The Scoping Plan calls for an "ambitious but achievable" reduction in California's greenhouse gas emissions, cutting approximately 30 percent from business-as-usual emission levels projected for 2020, or about 10 percent from today's levels. On a per-capita basis, that means reducing annual emissions of 14 tons of carbon dioxide for every man, woman, and child in California down to about 10 tons per person by 2020.

In May 2014, CARB released its *First Update to the Climate Change Scoping Plan* (CARB 2014). This Update identifies the next steps for California's leadership on climate change. While California continues on its path to meet the near-term 2020 greenhouse gas limit, it must also set a clear path toward long-term, deep GHG emission reductions. This report highlights California's success to date in reducing its GHG emissions and lays the foundation for establishing a broad framework for continued emission reductions beyond 2020, on the path to 80 percent below 1990 levels by 2050.

In November 2017, CARB released the 2017 Scoping Plan. This Scoping Plan incorporates, coordinates,
and leverages many existing and ongoing efforts and identifies new policies and actions to accomplish the State's climate goals and includes a description of a suite of specific actions to meet the State's 2030 GHG limit. In addition, Chapter 4 provides a broader description of the many actions and proposals being explored across the sectors, including the natural resources sector, to achieve the State's mid and long-term climate goals.

Guided by legislative direction, the actions identified in the 2017 Scoping Plan reduce overall GHG emissions in California and deliver policy signals that will continue to drive investment and certainty in a low carbon economy. The 2017 Scoping Plan builds upon the successful framework established by the Initial Scoping Plan and First Update while identifying new, technologically feasible, and cost-effective strategies to ensure that California meets its GHG reduction targets in a way that promotes and rewards innovation, continues to foster economic growth, and delivers improvements to the environment and public health, including in disadvantaged communities. The Plan includes policies to require direct GHG reductions at some of the State's largest stationary sources and mobile sources. These policies include the use of lower GHG fuels, efficiency regulations, and the Cap-and-Trade Program, which constrains and reduces emissions at covered sources.

Project Consistency with CARB Scoping Plan Policies and Measures1

2008 Scoping Plan Measures to Reduce Greenhouse Gas Emissions	Project Compliance with Measure
California Light-Duty Vehicle Greenhouse Gas Standards – Implement adopted standards and planned second phase of the program. Align zero-emission vehicle, alternative and renewable fuel, and vehicle technology programs with long-term climate change goals.	**Consistent.** These are CARB-enforced standards; vehicles that access the Project must comply with the standards and comply with the strategy.
Energy Efficiency – Maximize energy efficiency building and appliance standards; pursue additional efficiency, including new technologies, policy, and implementation mechanisms. Pursue comparable investment in energy efficiency from all retail providers of electricity in California.	**Consistent.** The Project will be compliant with the current Title 24 standards.
Low Carbon Fuel Standard – Develop and adopt the Low Carbon Fuel Standard.	**Consistent**. These are CARB-enforced standards; vehicles that access the Project must comply with the standards and comply with the strategy.
Vehicle Efficiency Measures – Implement light-duty vehicle efficiency measures.	**Consistent**. These are CARB-enforced standards; vehicles that access the Project must comply with the standards and comply with the strategy.
Medium/Heavy-Duty Vehicles – Adopt medium and heavy-duty vehicle efficiency measures.	**Consistent**. These are CARB-enforced standards; vehicles that access the Project must comply with the standards and comply with the strategy.
Green Building Strategy – Expand the use of green building practices to reduce the carbon footprint of California's new and existing inventory of buildings.	**Consistent.** The California Green Building Standards Code (proposed Part 11, Title 24) was adopted as part of the California Building Standards Code in the CCR. Part 11 establishes voluntary standards mandatory in the 2019 edition of the Code on planning and design for sustainable site development, energy efficiency (in excess of the California Energy Code requirements), water conservation, material conservation, and internal air contaminants. The Project will be subject to these mandatory standards.

High Global Warming Potential Gases – Adopt measures to reduce high global warming potential gases.	**Consistent.** CARB identified five measures that reduce HFC emissions from vehicular and commercial refrigeration systems; vehicles that access the Project are required to comply with the measures and will comply with the strategy.
Recycling and Waste – Reduce methane emissions at landfills. Increase waste diversion, composting, and commercial recycling. Move toward zero-waste.	**Consistent.** The state is currently developing a regulation to reduce methane emissions from municipal solid waste landfills. The Project will be required to comply with City programs, such as City's recycling and waste reduction program, which comply with the 75 percent reduction required by 2020 per AB 341.
Water – Continue efficiency programs and use cleaner energy sources to move and treat water.	**Consistent.** The Project will comply with all applicable City ordinances and CAL Green requirements.
2017 Scoping Plan Recommended Actions to Reduce Greenhouse Gas Emissions	**Project Compliance with Recommended Action**
Implement Mobile Source Strategy: Further, increase GHG stringency on all light-duty vehicles beyond existing Advanced Clean Car regulations.	**Consistent.** These are CARB-enforced standards; vehicles that access the Project must comply with the standards and comply with the strategy.
Implement Mobile Source Strategy: At least 1.5 million zero-emission and plug-in hybrid light-duty electric vehicles by 2025 and at least 4.2 million zero-emission and plug-in hybrid light-duty electric vehicles by 2030.	**Consistent**. These are CARB-enforced standards; vehicles that access the Project must comply with the standards and comply with the strategy.
Implement Mobile Source Strategy: Innovative Clean Transit: Transition to a suite of to-be-determined innovative clean transit options. Assumed 20 percent of new urban buses purchased beginning in 2018 will be zero-emission buses with the penetration of zero-emission technology ramped up to 100 percent of new sales in 2030. New natural gas buses, starting in 2018, and diesel buses, starting in 2020, meet the optional heavy-duty low-NOX standard.	**Consistent**. These are CARB-enforced standards; vehicles that access the Project must comply with the standards and comply with the strategy.
Implement Mobile Source Strategy: Last-Mile Delivery: New regulation that would result in the use of low NOX or cleaner engines and the deployment of increasing numbers of zero-emission trucks primarily for class 3-7 last-mile delivery trucks in California. This measure assumes ZEVs comprise 2.5 percent of new Class 3–7 truck sales in local fleets starting in 2020, increasing to 10 percent in 2025 and remaining flat through 2030.	**Consistent**. These are CARB-enforced standards; vehicles that access the Project must comply with the standards and comply with the strategy.
Implement SB 350 by 2030: Establish annual targets for statewide energy efficiency savings and demand reduction to achieve a cumulative doubling of statewide energy efficiency savings in electricity and natural gas end uses by 2030.	**Consistent.** The Project will be compliant with the current Title 24 standards.
By 2019, develop regulations and programs to support organic waste landfill reduction goals in the SLCP and SB 1383.	**Consistent**. The Project will be required to comply with City programs, such as City's recycling and waste reduction program, which comply with the 75 percent reduction required by 2020 per AB 341.
Notes: 1. Source: CARB Scoping Plan (2008 and 2017)	

As the latest 2017 Scoping Plan builds upon previous versions, project consistency with applicable strategies of both the 2008 and 2017 Plan are assessed in the table below. As shown in the table below, the Project is consistent with the applicable strategies and would result in a **less than significant impact**.

SB-32

SB-32 requires the state board to ensure that statewide greenhouse gas emissions are reduced to 40 percent below the 1990 level by 2030. SCAQMD's thresholds used Executive Order S-3-05 goal as the

the basis for deriving the screening level. The California Governor issued Executive Order S-3-05, GHG Emission, in June 2005, which established the following reduction targets:

- 2010: Reduce greenhouse gas emissions to 2000 levels
- 2020: Reduce greenhouse gas emissions to 1990 levels
- 2050: Reduce greenhouse gas emissions to 80 percent below 1990 levels.

As the SCAQMD uses EO S-3-05 as the basis for their screening level, and EO S-3-05 includes the long-term goal to reduce greenhouse gas emissions to 80 percent below 1990 levels by 2050, the Project would also be consistent with the goal of SB 32 (to reduce greenhouse gas emissions to 40 percent below 1990 levels by 2030). Therefore, projects that meet the current interim emissions targets/thresholds established by SCAQMD would also be on track to meet the reduction targets for 2030. Furthermore, all of the post-2020 reductions in GHG emissions are addressed via regulatory requirements at the State level. The Project will be required to comply with these regulations as they come into effect.

Therefore, as the Project's emissions do not exceed the SCAQMD draft GHG emissions threshold of 3,000 metric tons CO2e per year, the Project would not conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases. Furthermore, the Project will comply with applicable Green Building Standards and City of Compton's policies regarding sustainability (as dictated by the City's General Plan) and, therefore, will have **a less than significant impact** as noted above.

IX. HAZARDS AND HAZARDOUS MATERIALS – Would the project:

a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☐	☒

Response:

Hazardous materials are highly regulated in California, including how they are transported, used, and stored. The development of a residential project will not result in the transport, use, or storage of massive quantities of hazardous materials. The City relies on the Fire Department's assistance and the County's Department of Environmental Health in the regulation of hazardous materials.

The residents of the Project will store and use various chemicals for routine housekeeping and landscaping purposes. Comparable products will be required for the common recreation areas and general Project maintenance. However, none of these chemicals will be used in sufficient quantities to pose a threat to humans or the environment. Therefore, there will be **no project-related impacts** associated with the hazardous materials**,** directly, indirectly, or cumulatively.

b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐

Response:

The Project will not create hazards to the public through upset or accident as through the construction process; any hazardous materials will be handled, stored, and used in compliance with all Federal, State, and City regulations. As noted above, the Project will create single-family residences that will store and use various chemicals for routine housekeeping and landscaping purposes. Comparable products will be required for the common recreation areas and general Project maintenance. However, none of these chemicals will be used in sufficient quantities to pose a threat to humans or the environment. Therefore

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
there will be **no project-related impacts** associated with the hazardous materials**,** directly, indirectly, or cumulatively.				
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☐	☒
Response: The Laurel Street Elementary School (1321 West Laurel Street) is located approximately 641-feet from the closest point of the subject property or a little over a .12 of a mile. Any hazardous materials will be handled, stored, and used in compliance with all Federal, State, and City regulations through the construction process. As noted above, the Project will create single-family residences that will store and use various chemicals for routine housekeeping and landscaping purposes. Comparable products will be required for the common recreation areas and general Project maintenance. However, none of these chemicals will be used in sufficient quantities to pose a threat to humans or the environment. The Project will not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste to cause danger to surrounding schools. Therefore, **no impacts,** directly, indirectly or cumulatively to schools will occur.				
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☐	☒
Response: Per the Phase I Environmental Site Assessment prepared by Stantec, the subject property is not located on a site included in a list compiled pursuant to Government Code Section 65962.3. The EnviroStor database did indicate that there are sites in the vicinity that may represent Recognized Environmental Conditions (RECs), Historical Recognized Environmental Conditions (HRECs), or de minimis conditions; however, the distance of these other sites from the subject site with respect to and the groundwater flow direction, the native soils, and regulatory status, none of the other sites are expected to affect the soil or groundwater quality at the subject site. Nevertheless, due to the historic use of the property for light agriculture, a Phase II Environmental Site Assessment was performed by Stantec, with six (6) borings occurring on April 24, 2019. Analysis of the borings concluded that the historical agricultural use of the property did not represent a REC or human health risk considering the contemplated residential use of the subject site. It is noted that the City has numerous high-pressure natural gas and petroleum pipelines. One such line, a natural gas line, is located within West Compton Boulevard. The Office of Pipeline Safety of the U.S. Department of Transportation is the primary agency responsible for inspecting and maintaining pipelines running through the City. To ensure safety during construction, all requirements of Section 20-3 – Street Excavations shall be required, as applicable. Therefore, this Project will have **no impact,** directly, indirectly, or cumulatively, in creating a significant hazard to the public or the environment.				
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	☒
Response: The Project is not located within a Los Angeles County Airport Land Use Commission (ALUC) area. The closest Airport is the Compton/Woodley Airport, but the subject site is outside the airport influence area for this airport.				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Given the above guidelines, the Project will have **no impact** on creating a safety hazard for people residing or working in the Project area from airport operations, directly, indirectly, and cumulatively.				
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒

Response:

Los Angeles County adopted the All-Hazards Mitigation Plan (AHMP), providing a framework for emergency response. The City also maintains an Emergency Operations Plan (EOP) that documents City policies for responding to major emergencies that threaten life, safety, and property. The plan establishes a chain of command and outlines the responsibilities of various City departments in the event of an emergency. The General Plan establishes Compton Boulevard as an evacuation route.

Two (2) driveways will provide project access off West 151st Street. The Project site is bounded by West Compton Boulevard to the north, West 151st Street to the south, South Kemp Avenue to the east, and South Dwight Avenue to the west. These existing streets are within the City's established street system. The Project will not alter the existing circulation pattern in the Project area. Emergency access and evacuation routes will be unaffected by the Project. In addition, the Project will comply with Section 20-6 – Temporary Street Closures of the Municipal Code should any of the four streets/sidewalks/bicycle lanes need to be temporarily closed during construction.

The Project provides adequate access for emergency vehicles, including adequate street widths and vertical clearance on new streets. Implementation of federal, state, and local laws and regulations in this Project's construction ensures **no impact** on an adopted emergency response plan or evacuation plan.

g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	☐	☐	☐	☒

Response:

The Project site is not within a fire hazard zone, as defined by the Los Angeles County AHMP, Figure 7-1 – Los Angeles County Very High Fire Hazard Severity Zones. The City maintains its own Fire Department. The Project will not expose people or structures to significant risks associated with wildfires and, therefore, **no impact**, directly, indirectly, or cumulatively will occur.

X. HYDROLOGY AND WATER QUALITY – Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☒	☐

Response:

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact

See responses in Section XVX below for further information on water and wastewater.

The existing site is currently vacant, pervious land. Elevations onsite range between approximately 81 feet to 85 feet above mean sea level, with a relative low point near the site's northeast corner. Existing site drainage is generally directed as sheet flow in the northeast direction and overflows into the rights-of-way of West Compton Boulevard and South Kemp Avenue. Within West Compton Boulevard and South Kemp Avenue, two (2) existing catch basins capture and convey stormwater to an existing Los Angeles County Flood Control District (LACFCD) 66" storm drain facility within West Compton Boulevard, which flows in the easterly direction and outlets to the existing Compton Creek. Compton Creek drains to the existing Los Angeles River and ultimately the Pacific Ocean at San Pedro Bay.

Proposed site drainage will be collected and conveyed by two (2) proposed curb-inlet catch basins and an area drain system to two (2) proposed underground detention systems, which will discharge to the existing LACFCD 66" storm drain at two (2) points of connection. Low flows will be directed to proposed Modular Wetlands System (MWS) Biofiltration Vaults for water quality treatment prior to entering the proposed detention systems. During larger storm events, stormwater runoff will bypass the treatment systems and be conveyed directly to the proposed detention system. The detention system will be equipped with an orifice to mitigate the peak discharge rate to the allowable peak flow rate (Allowable Q) provided by the Los Angeles County Department of Public Works (LACDPW). Excess flows will be temporarily detained as they are released at the Allowable Q. Refer to Appendix H of the Preliminary Hydrology and Hydraulics Study for the Allowable Q provided by LACFCD.

The Project will comply with the requirements of Chapter 31 – Runoff Pollution Control of the Municipal Code. As such, a Preliminary Low Impact Development (LID) Plan has been prepared consistent with the Los Angeles County Department of Public Works LID Manual and the intent of the NPDES storm-water requirements (State Water Resources Control Board (SWRCB) National Pollutant Discharge Elimination System (NPDES) General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities, Order No. 2009-0009-DWQ, NPDES No. CAS000002, dated July 1, 2010).

The Project will be served by the Los Angeles County Sanitation District (LACSD) sewer infrastructure. C&V Consulting, Inc. has prepared a Sewer Area Study. The existing sewer system analyzed in the area study has a design capacity above the calculated cumulative flow. The peak discharge at the downstream end of the sewer system 15" pipe entering the County Sanitation District No. 1 existing 31.3" sewer trunk main is calculated to be a rate of 1.8465 cfs with a flow depth of 7.61 inches. Refer to Appendix B of the Sewer Area Study for calculations and tabulated results. Therefore, it is concluded that the existing sewer system has adequate capacity for the proposed development.

The Project's design and compliance with existing federal, state, and local water quality laws and regulations related to water quality standards will ensure a **less than significant impact,** directly, indirectly, and cumulatively to water quality and discharge.

b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☒	☐

Response:

The City is located in the Central Basin groundwater basin. The Central Subbasin occupies a large portion of the southeastern part of the Coastal Plain of Los Angeles Groundwater Basin. This subbasin is commonly referred to as the "Central Basin." It is bounded on the north by a surface divide called the La Brea high and, on the northeast, and east by emergent, less permeable Tertiary rocks of the Elysian, Repetto, Merced, and Puente Hills. The southeast boundary between Central Basin and Orange County Groundwater Basin roughly follows Coyote Creek, a regional drainage province boundary. The southwest boundary is formed by the Newport Inglewood fault system and the associated folded rocks of the Newport Inglewood uplift. The Los Angeles and San Gabriel Rivers drain inland basins and pass across the surface of the Central Basin on their way to the Pacific Ocean. The average precipitation throughout the subbasin ranges from 11 to 13-inches, with an average of around 12-inches.

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact

The City uses a blend of predominate groundwater from the Central Basin groundwater basin and surface water imported by the Metropolitan Water District of Southern California (MWD). MWD's imported water sources are a blend of State Water Project water from Northern California and water from the Colorado River Aqueduct. The City has court adjudicated water rights to pump approximately 70 percent of the City's water demand. The City utilizes eight (8) groundwater wells to pump potable water from a natural underground reservoir. The City also has three (3) imported water connections that help supplement the City's water demands.

The Project will be required to comply with City's water-efficiency requirements, including the use of drought-tolerant planting materials and limited landscaping irrigation, as well as all water restrictions imposed by the Los Angeles County Department of Public Works (LACDPW) at the time the Project is constructed. Implementation of these and other applicable requirements, including those noted in Response X a) above, will assure that water-related impacts to groundwater recharge are reduced to **less than significant**, directly, indirectly, and cumulatively.

c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i) Result in substantial erosion or siltation on- or off-site?	☐	☐	☒	☐

Response:

There are no natural drainages on the Project site; the Project will not alter any existing drainage patterns. Proposed drainage will be directed as sheet flow overland and through a series of area drains toward proposed Modular Wetlands System (MWS) Biofiltration Vaults for water quality treatment prior to discharging to the existing LACFCD 66" storm drain within West Compton Boulevard. The proposed area drain system will collect surface runoff within landscaped and backyard areas and convey flows directly to the proposed MWS Biofiltration Vaults via the proposed underground storm drain. Street surface flows will be conveyed via the proposed curb and gutter toward two (2) proposed curb-inlet catch basins located along the private drive aisle. The proposed catch basins will be equipped with a Dvert system designed to divert low flows to the proposed MWS Biofiltration Vaults. Treated stormwater will be conveyed via proposed underground storm drain to proposed underground detention systems, which will be outflow controlled to mitigate peak discharge to the existing LACFCD storm drain within West Compton Boulevard. During larger storm events and when the MWS Biofiltration Vaults are at capacity, the Dvert system within the catch basins and an internal bypass within the MWS Biofiltration Vaults will allow for high flows to bypass treatment and flow directly to the proposed detention systems via the proposed storm drain system. Drainage from the site will be conveyed from the detention system to the existing LACFCD 66" storm drain at two (2) points of connection. Upon discharging to the existing LACFCD storm drain, site runoff will follow the historic drainage pattern.

Implementing Best Management Practices (BMPs) required by the City and implemented through the Project's Low Impact Development (LID) Plan will mitigate potential erosion impacts to a **less than significant** level directly, indirectly, and cumulatively.

ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite?	☐	☐	☒	☐

Response:

In addition to Response X a) & b) above, the design and implementation of the basins will be reviewed and approved by the City Engineer as well as the Los Angeles County Department of Public Works (LACDPW) to assure compliance with all applicable local, state, and Federal standards.

Implementation of these and other applicable requirements will assure that drainage and stormwater will not create or contribute water, which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff. Therefore, the Project will have a **less than significant impact**, directly, indirectly, or cumulatively to the rate or amount of surface runoff in a manner that would result in flooding on- or off-site.

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	☐	☐	☒	☐
Response: See Response X a) & b) above.				
iv) Impede or redirect flood flows?	☐	☐	☐	☒
Response: No signs of flooding were observed when Alta did their field investigation for the Geotechnical Report. As described throughout this section, the Project will be required to comply with all applicable water quality standards. To further minimize potential water quality degradation, the Project will be connected to the sewer system and on-site/off-site stormwater conveyance system. **No impacts** to Project-related water quality degradation will occur, directly, indirectly, and cumulatively.				
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☐	☒
Response: A seiche and tsunami are defined below. Since the Project site is not located near a body of water or the ocean, the Project is not subject to these hazards. A seiche is a temporary disturbance or oscillation in the water level of a lake or partially enclosed body of water, especially one caused by changes in atmospheric pressure. Tsunami is a long high sea wave caused by an earthquake, submarine landslide, or other disturbance. The Project site is not located within a 100-year mapped flood zone (FEMA Flood Insurance Rate Map No. 06037C1815F (September 26, 2008). The Project would redirect on-site drainage patterns; however, it would not impede or redirect flood flows. As referenced, all drainage would be managed to ensure pre-construction flows off-site are maintained. The Project would not expose people or structures to flood hazards from severe storm events. Compliance with existing federal, state, and local flood hazard laws and regulations pertaining to the design of the Project will ensure the Project will **not be impacted** by a flood hazard directly, indirectly, or cumulatively.				
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☐	☒
Response: As noted throughout this Section, the Project will comply with all City, County, state, and federal requirements for water quality and sustainable groundwater. Compliance with existing federal, state, and local flood hazard laws and regulations pertaining to the design of the Project will ensure that the Project will have result in **no impact** from a flood hazard impact, directly, indirectly, and cumulatively.

11. Preliminary Hydrology and Hydraulics Study – prepared by C&V Consulting Inc., August 2019, Revised, March 2021
12. Preliminary Low Impact Development Plan – prepared by C&V Consulting Inc., August 2019, Revised, March 2021

XI. LAND USE AND PLANNING – Would the project:

a) Physically divide an established community?	☐	☐	☐	☒

Response:

The Project site is vacant land with established single-family residential neighborhoods to the east and south and commercial development to the west and north. An additional sixty (60) townhomes will not divide an existing community but rather will expand an existing community. Therefore, **no impact** either directly, indirectly, or cumulatively will occur to an established community.

b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☒	☐

Response:

The underlying General Plan designation of MDR – Medium-Density Residential is inconsistent with the existing zoning of C-L – Commercial Limited and P – Parking. To create consistency with the General Plan and the Zoning designation of C-L – Commercial Limited while permitting a 60-unit townhome condominium Project the applicant is proposing to change the General Plan land use designation to General Commercial.

The General Commercial category allows any use permitted in the Medium-Density and High-Density Residential categories. Since the High-Density Residential General Plan land use designation permits 17.1 to 34 du/acre net, the General Commercial land use designation is an appropriate designation for this Project, which proposes 24.5 du/acre.

In addition, the applicant is also proposing to change the existing C-L – Limited Commercial & P – Automobile Parking Zones to the C-L – Limited Commercial Zone. The Limited Commercial Zone (C-L) is established to provide neighborhood, community, and regional retail business areas with related uses.

The proposed General Plan land use designation and zone change will bring consistency between the two land-use maps while implementing the General Plan policies, including the following:

Land Use Element

Policy 2.1 (M): Provide increased market-rate housing opportunities.

Housing Element

Goal 1: The City of Compton will improve the housing supply and the choice of housing opportunities through private investment and, where necessary, through public action and financing.

Policy 2.3: The City of Compton will encourage variety in the supply of housing at costs affordable to the various income levels of the population.

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact

The Project will not result in a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect as the proposed changes are in accordance with the City's plans, policies, and regulations established in the General Plan or Zoning Ordinance; therefore, a **less than significant impact,** directly, indirectly, or cumulatively to will occur.

Sources:

1. Compton General Plan Vision 2010, adopted December 3, 1991
2. City of Compton Adopted 2013 – 2021 Housing Element Update, February 2020
3. Chapter 30 – Zoning of the Compton Municipal Code

XII. MINERAL RESOURCES – Would the project:

a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☒	☐

Response:

Mineral deposits are limited to clay deposits used for bricks within the City. However, the City is near a number of active oil fields. The Rosecrans oilfield is located approximately two miles to the west. The East Los Angeles oilfield is located approximately seven (7) miles to the northeast, and the Dominguez oilfield is located approximately five (5) miles to the south. There are also several oil and natural gas wells located in the City. Most of these wells are in the southern portion of the City.

Based on Alta's review of geologic literature and their subsurface investigation, the Project site is underlain by undocumented artificial fills and young Quaternary alluvium. The geologic units are briefly described below.

Artificial Fill (Map symbol af)

Artificial fill was found in the upper two (2) to five (5) feet. It consists of light to dark brown, silty clay in a dry to moist, stiff condition, with some areas containing concrete cobbles up to 11 inches in diameter.

Young Quaternary Alluvium (Map symbol Qya)

Young Quaternary alluvium underlies the artificial fill, which consists of light brown to brown, tan with some orange mottling, silty clay, clayey silt, sandy silt, sand, and silt in a moist, stiff to very stiff, and medium dense to dense condition. The unit was logged to a maximum depth of 51.5 feet below the ground surface.

The artificial fill is most likely a result of the previous convalescent hospital development. As such, the clay within the fill would not be beneficial for the making of brick.

The Surface Mining and Reclamation Act (SMARA) Mineral Land Classification system designates the City as being in the San Gabriel Production-Consumption Region. However, the Project site occurs in an urban setting and is not suitable for mineral resource land uses. The Project will have a **less than significant impact**, directly, indirectly, and cumulatively on mineral resources.

b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	☐	☐	☐	☒

Response:

The Project site is not delineated on a local general plan, specific plan, or other land use plan and will, therefore, have **no impact**, directly, indirectly, and cumulatively on the availability of important mineral resources.

XIII. NOISE – Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☒	☐	☐

Response:

A Noise Impact Study was prepared for the Project by MD Acoustics. The results follow below.

Existing Noise Environment

Four (4) short term ambient noise measurement was conducted at the Project site. The measurements measured the 1-hour Leq, Lmin, Lmax, and other statistical data (e.g., L2, L8). The noise measurement was taken to determine the existing baseline noise conditions.

Short-Term Noise Measurement Results

The results of the short-term noise data are presented in the table below.

SHORT-TERM NOISE MEASUREMENT DATA (dBA)[1]									
Location	**Date**	**Start Time**	**Leq**	**Lmax**	**Lmin**	**L(2)**	**L(8)**	**L(25)**	**L(50)**
Site 1	5/14/2019	10:42 AM	69.6	85.8	45.2	44.9	46.9	54.5	53.9
Site 2	5/14/2019	11:08 AM	73.3	92.3	48.0	55.3	59.0	61.4	65.8
Site 3	5/14/2019	11:16 AM	49.7	91.2	37.4	46.8	47.1	52.4	55.4
Site 4	5/14/2019	11:23 AM	54.1	94.8	41.9	44.9	46.9	54.5	53.9
Notes:									
[1.] Measurements were taken over a ten-minute interval.									

Short-term noise data indicates the ambient noise levels range between 54.1 to 73.3 dBA Leq. The measured noise levels and field notes indicate that traffic noise is the main source of noise impacting the Project site.

Future Noise Environment Impacts and Mitigation

The Noise Impact Study analyzed future noise impacts to the Project and compared the results to the City's Noise Standards. The analysis detailed the estimated exterior noise levels associated with traffic from adjacent roadway sources.

Off-site Traffic Noise Impact

The potential off-site noise impacts caused by the increase in vehicular traffic due to the Project were calculated at a distance of 50 feet. The distance to the 55, 60, 65, and 70 dBA CNEL noise contours are also provided for reference. The noise level at 50 feet is representative of approximate distances to existing homes along the subject roadway. The noise contours were calculated for the following scenarios and conditions:

- LOS D Condition: This scenario refers to the existing year traffic noise condition and is demonstrated in the table below.
- LOS D + Project Condition: This scenario refers to the existing year plus project traffic noise condition and is demonstrated in the table below.

LOS D/LOS D + Project Scenario Comparison

The table below provides the LOS D and LOS D + Project noise conditions and shows the change in noise level due to the proposed Project. As shown in the table, the increase in traffic noise for the Existing and Existing + Project scenario would have a nominal increase of 0.1 dBA at 50 feet from the centerline of the subject roadway.

LOS D Without Project Exterior Noise Levels

Roadway	Segment	CNEL at 50 Ft (dBA)	Distance to Contour (Ft)			
			70 dBA CNEL	65 dBA CNEL	60 dBA CNEL	55 dBA CNEL
Compton Blvd	Wilmington Ave to S Central Ave	68	36	78	169	363

Change in LOS D + Project Exterior Noise Levels

Roadway	Segment	CNEL at 50 Ft (dBA)	Distance to Contour (Ft)			
			70 dBA CNEL	65 dBA CNEL	60 dBA CNEL	55 dBA CNEL
Compton Blvd	Wilmington Ave to S Central Ave	68	37	79	171	367

Change in LOS D Noise Levels as a Result of Projects

Roadway[1]	Segment	CNEL at 50 Feet dBA[2]			
		Existing Without Project	Existing With Project	Change in Noise Level	Potential Significant Impact
Compton Blvd	Wilmington Ave to S Central Ave	68	68.0	0.1	No

Notes:
[1] Exterior noise levels calculated at 5 feet above ground level.
[2] Noise levels calculated from the centerline of the subject roadway.

On-site Traffic Noise Impact

Traffic noise from the local roadway network was evaluated and compared to the City's Exterior Noise standard. Per the City's Exterior Noise Standard (Table N-2 from the City's General Plan, Noise Element), the residential noise limit is 65 dBA CNEL. As shown in the table above, Existing Plus Project traffic 65 dBA CNEL noise projections from Compton Boulevard will reach up to 79 feet from the centerline of the road. Residential structures are located approximately 50-feet away from the centerline of Compton Boulevard and have a projected noise level of 68 dBA. It should be noted that the existing noise level exceeds the 65 dBA noise limit, so 68 dBA becomes the standard.

Future Interior Noise

The future interior noise level was calculated for the sensitive receptor locations using a typical "windows open" and "windows closed" condition. A "windows open" condition assumes 12 dBA of noise attenuation from the exterior noise level. A "windows closed" condition" assumes 20 dBA of noise attenuation from the exterior noise level. The table below indicates the first and second-floor interior noise levels for the Project site.

Future Interior Noise Levels (dBA CNEL)

Location	Roadway Noise Source	Exterior Facade Study Location	Noise Level at Building Facade1	Interior Noise Reduction Required to Meet Interior Noise Standard of 45 dBA CNEL	Interior Noise Level w/ Typical Residential Windows (STC≥ 25)		STC Rating for Windows Facing Subject Roadway4
					Window Open2	Windows Closed 3	
1st Row Units Along Northern Property Line	Compton Blvd	1st Floor	68	23	56	48	26
		2nd Floor	68	23	56	48	26

Notes:
1. Noise level from Table 5 of the Noise Impact Study and from worksheets Appendix C of the Noise Impact Study.
2. A minimum of 12 dBA noise reduction is assumed with a "windows open" condition.
3. A minimum of 20 dBA noise reduction is assumed with a "windows closed" condition.
4. Indicates the required STC rating to meet the interior noise standard.

As shown in the table above, the interior noise level will range from 56 dBA CNEL with the windows open and 48 dBA CNEL with the windows closed.

To meet the City's interior 45 dBA CNEL standard, a "windows closed" condition is required. The windows and sliding glass doors directly facing Compton Boulevard will require a minimum STC rating of 26 for the 1st and 2nd floors (**MM NOI-1**). A "windows closed" condition simply means that to achieve a 45 dBA CNEL interior noise level, the windows must be closed, and does not mean the windows must be fixed.

Therefore, the Project will have a **less than significant impact with mitigation** on interior noise.

MM NOI-1: The windows and sliding glass doors facing the West Compton Boulevard shall require a minimum STC rating of 26 for the 1st and 2nd floors.

Construction Noise Impact

The degree of construction noise may vary for different areas of the Project site and vary depending on the construction activities. Noise levels associated with the construction will vary with the different phases of construction.

Construction Noise

The Environmental Protection Agency (EPA) has compiled data regarding the noise-generated characteristics of typical construction activities. The data is presented in the table below.

Typical Construction Noise Levels[1]

Equipment Powered by Internal Combustion Engines

Type	Noise Levels (dBA) at 50 Feet
Earth Moving	
Compactors (Rollers)	73 - 76
Front Loaders	73 - 84
Backhoes	73 - 92
Tractors	75 - 95
Scrapers, Graders	78 - 92

Pavers	85 - 87
Trucks	81 - 94
Materials Handling	
Concrete Mixers	72 - 87
Concrete Pumps	81 - 83
Cranes (Movable)	72 - 86
Cranes (Derrick)	85 - 87
Stationary	
Pumps	68 - 71
Generators	71 - 83
Compressors	75 - 86

Impact Equipment

Type	Noise Levels (dBA) at 50 Feet
Saws	71 - 82
Vibrators	68 - 82
Notes: [1] Referenced Noise Levels from the Environmental Protection Agency (EPA)	

Construction is anticipated to occur during the permissible hours according to the City's General Plan. Construction noise is considered a short-term impact and would be considered significant if construction activities are taken outside the allowable times described in the City's General Plan (Section 7-12.22). Construction noise will have a temporary or periodic increase in the ambient noise level above the existing noise level within the Project vicinity. Furthermore, noise reduction measures are provided to reduce construction noise further. The construction noise impact is considered less than significant; however, construction noise level projections are provided.

Typical operating cycles for these types of construction equipment may involve one or two minutes of full power operation followed by three to four minutes at lower power settings. Noise levels will be loudest during the grading phase. A likely worst-case construction noise scenario during grading assumes the use of a grader, a dozer, an excavator, and three (3) backhoes operating at 80 feet from the nearest sensitive receptor.

To ensure that construction activities do not disrupt the adjacent land uses, mitigation measures for noise reduction **MM NOI-2** through **MM NOI-6** shall be required.

The Project will have a **less than significant impact with mitigation** on the generation of temporary or permanent increases in ambient noise levels in the vicinity of the Project.

MM NOI-2: Construction shall occur during the hours of 7:00 AM to 7:00 PM.

MM NOI-3: Stationary construction noise sources such as generators or pumps should be located as far as feasibly possible from any existing adjacent residential units, as feasible.

MM NOI-4: Construction staging areas should be located as far as feasibly possible from any adjacent sensitive land uses as feasible.

MM NOI-5: During construction, the contactor shall ensure all construction equipment is equipped with appropriate noise attenuating devices.

MM NOI-6: Equipment shall be maintained so that vehicles and their loads are secured from rattling and banging.

MM NOI-7: Grading and construction contractors shall use quieter equipment as opposed to noisier equipment (such as rubber-tired equipment rather than track equipment), to the maximum extent feasible.

b) Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☒	☐

Response:

Construction activities can produce a vibration that may be felt by adjacent land uses. The Project's construction would not require the use of equipment such as pile drivers, which are known to generate substantial construction vibration levels. The primary vibration source during construction may be from a bulldozer. A large bulldozer has a vibration impact of 0.089 inches per second peak particle velocity (PPV) at 25 feet, which is perceptible but below any risk to architectural damage.

The fundamental equation used to calculate vibration propagation through average soil conditions and distance is as follows:

$$PPV_{equipment} = PPV_{ref} (100/D_{rec})^{n}$$

Where: PPV_{ref} = reference PPV at 100ft.
D_{rec} = distance from equipment to receiver in ft.
n = 1.1 (the value related to the attenuation rate through ground)

The Caltrans Transportation and Construction Induced Vibration Guidance Manual thresholds in the table below provide general thresholds and guidelines as to the vibration damage potential from vibratory impacts.

Guideline Vibration Damage Potential Threshold Criteria

Structure and Condition	Maximum PPV (in/sec)	
	Transient Sources	Continuous/Frequent Intermittent Sources
Extremely fragile historic buildings, ruins, ancient monuments	0.12	0.08
Fragile buildings	0.2	0.1
Historic and some old buildings	0.5	0.25
Older residential structures	0.5	0.3
New residential structures	1.0	0.5
Modern industrial/commercial buildings	2.0	0.5

Source: Table 19, Transportation and Construction Vibration Guidance Manual, Caltrans, Sept. 2013.
Note: Transient sources create a single isolated vibration event, such as blasting or drop balls. Continuous/frequent intermittent sources include impact pile drivers, pogo-stick compactors, crack-and-seat equipment, vibratory pile drivers, and vibratory compaction equipment.

At a distance of 80 feet, a large bulldozer would yield a worst-case 0.025 PPV (in/sec), which slightly perceptible, but sustainably below any risk of damage (0.5 in/sec PPV is the threshold of residential structures). The impact is **less than significant**, and no mitigation is required.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒

Response:

The Project site is located outside the noise contours for the Compton/Woodley Airport and will have **no impact** on exposing people to excessive airport noise levels.

Sources:

1. Compton General Plan Vision 2010, adopted December 3, 1991
   - Figure N-1 – Existing CNEL Nos Contours
   - Figure N-2 – Existing Airport Noise Contours
   - Figure N-3 – Future CNEL Noise Contours

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
• Figure N-4 – Future Airport Noise Contours • Table N-1 – Noise/Land Use Compatibility Matrix • Table N-2 – Interior and Exterior Noise Standards 3. Chapter 30 – Zoning of the Compton Municipal Code 4. Section 7-12 – Noise of the Compton Municipal Code 5. Compton Residential Development Noise Impact Study – prepared by MD Acoustics LLC, April 14, 2021				
XIV. POPULATION AND HOUSING – Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?	☐	☐	☒	☐
Response: The City's General Plan establishes the development potential of the City to accommodate the City's growth. The Project, as proposed, will help to accommodate that growth but will not induce it. The Project site is located on existing streets, and utilities and public facilities are all available in the immediate area. No new road or utility infrastructure is required. Project-related impacts are expected to be **less than significant.**				
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒
Response: The Project site is vacant and will not displace any persons or require the construction of replacement housing. Therefore, there is **no impact** on housing.				
Sources: 1. Compton General Plan Vision 2010, adopted December 3, 1991 2. Chapter 30 – Zoning of the Compton Municipal Code				
XV. PUBLIC SERVICES – Would the project:				
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
i) Fire protection?	☐	☐	☒	☐
Response: The Project is located approximately .9 miles from Fire Station #1, located at 201 South Acacia Avenue, three (3) minutes away. As a result, fire personnel will reach the site within the average 4.5-minute response time. The Fire Department will approve the Project site plan to ensure it meets applicable fire standards and regulations. The Fire Department will review the Project for compliance with all Fire Codes. By implementing all regulations and City policies for development projects, the Project will have a **less than significant** impact on fire services, directly, indirectly, and cumulatively.				
ii) Police protection?	☐	☐	☒	☐
Response: Police protection is provided by the Los Angeles County Sheriff's Department. The Project site is served by the Compton Station, located at 301 South Willowbrook Avenue. Emergency response times throughout the City average 2.5-minutes.				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
The Project provides two (2) access points for the Police Department off of West 151st Street. The Police Department will review the Project for compliance with all Safety Codes. By implementing all regulations and City policies for development projects, the Project will have a **less than significant** impact on police services, directly, indirectly, and cumulatively.				
iii) Schools?	☐	☐	☒	☐

Response:

The Project is located within the service area boundary of the Compton Unified School District. The closest school to the Project site is the Laurel Street Elementary School (1321 West Laurel Street), located approximately 641-feet from the closest point of the subject property or a little over a .12 of a mile. The Project is required to pay the state-mandated school fees in place at the time that development occurs. These fees are designed to mitigate impacts to schools by providing funds for the construction of new facilities. By implementing all regulations and City and School District policies for development projects, the Project will have a **less than significant** impact on schools, directly, indirectly, and cumulatively.

iv) Parks?	☐	☐	☒	☐

Response:

The City of Compton Parks and Recreation Department maintains 14 local parks that encompass 60 acres of parkland. The nearest parks to the subject property are Gonzales, Walter R. Tucker, and Wilson Parks.

The Project will increase the demand for public parks. The City imposes a fee for residential projects of $4779.06 per unit. This fee is designed to reduce the impacts of new development on City park facilities. By implementing all regulations and City policies for development projects, the Project will have a **less than significant** impact on parks, directly, indirectly, and cumulatively.

v) Other public facilities?	☐	☐	☒	☐

Response:

The Project will result in a minor increase in demand for City services and facilities, including recreational trails and library services. This increase is consistent with the General Plan Vision 2010 projections for these facilities. It will be offset by the increased property and sales tax generated by the build-out of the Project. Therefore, impacts to other public facilities are **less than significant**, directly, indirectly, and cumulatively.

Sources:

1. Compton General Plan Vision 2010, adopted December 3, 1991
   - Figure OS-1 – Conservation/Open Space/Parks and Recreation Plan
   - Figure PF-1 – Public Facilities
2. Chapter 30 – Zoning of the Compton Municipal Code

5. Chapter 14 – Building and Housing of the Compton Municipal Code
6. Chapter 22 – Fire Prevention and Protection of the Compton Municipal Code
7. Chapter 18 – Public Parks and Playgrounds of the Compton Municipal Code

XVI. RECREATION – Would the project:				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☒	☐

Response:

The City of Compton Parks and Recreation Department maintains 14 local parks that encompass 60 acres of parkland. The nearest parks to the subject property are Gonzales, Walter R. Tucker, and Wilson Parks.

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact

The Project will increase the demand for public parks. However, it will not increase the demand over that planned under the General Plan Vision 2010. The City imposes a fee for residential projects of $4779.06 per unit. This fee is designed to reduce the impacts of new development on City park facilities. By implementing all regulations and City policies for development projects, the Project will have a **less than significant** impact on parks, directly, indirectly, and cumulatively.

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which have an adverse physical effect on the environment?	☐	☐	☐	☒

Response:

The Project does provide some open space areas. It will not require the construction or expansion of recreational facilities as the site was planned for residential development under the General Plan Vision 2010. Therefore, the Project will have **no impact** on recreational facilities, causing an adverse effect on the environment.

Sources:

1. Compton General Plan Vision 2010, adopted December 3, 1991
   - Figure OS-1 – Conservation/Open Space/Parks and Recreation Plan
2. Chapter 30 – Zoning of the Compton Municipal Code

XVII. TRANSPORTATION – Would the project:				
a) Conflict with program plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	☐	☒	☐	☐

Response:

CITY OF COMPTON GENERAL PLAN 2010 – CIRCULATION ELEMENT

MASTER PLAN OF STREETS AND HIGHWAYS

Compton Boulevard is proposed in the General Plan as a Secondary Highway. A Secondary Highway has an 80-foot right-of-way with a 60-feet curb-to-curb. Currently, Compton Boulevard is already built and designed to the General Plan standards.

West 151st Street, South Kemp Avenue, and South Dwight Avenue are local streets, and the Project will build the half-width of each of these streets wherever it is currently missing.

ALTERNATIVE MODES OF TRANSPORTATION

Pedestrian and Bicycles

Sidewalks and curb ramps at intersections are present in the study area, except on the east side of South Dwight Avenue along the Project's frontage and on the north side of West 151st Street along the Project's frontage, where they are absent. The Project will complete sidewalks adjacent to the Project site for use by pedestrians.

The Bicycle Master Plan (May 2015) proposes a Class IV Protected Bicycle Lane on West Compton Boulevard. However, the Plan does not indicate which side of West Compton Boulevard the lane is proposed for, and the City Engineer has not requested that the Project accommodate such a lane. Therefore, the Project will have a **less than significant impact** on on-site roadway and site access improvements.

Public Transit Services

The City of Compton is served by Los Angeles Metro, which provides bus service throughout Los Angeles County. The figure below shows the Metro routes in the vicinity of the City of Compton. Additionally, the Compton Renaissance Transit System provides limited local service within the City of Compton.

There is one bus route within one-quarter mile of the Project site. Metro Route 51/351 travels between the Wilshire/Vermont Purple Lane Station to the Compton Transit Center. In the Project's vicinity, Route 51/351 runs along West Compton Boulevard with a stop at the West Compton Boulevard/South Dwight Avenue intersection adjacent to the Project site. Route 51/351 runs from 5:00 AM to 10:00 PM on weekdays with headways of 20-35 minutes and weekends with 30-45 minute headways.

TEMPORARY TRAFFIC IMPACTS FROM CONSTRUCTION

The Project will be export approximately 4,320-cubic yards of dirt during the grading stage of construction, which is approximately 308 truckloads. The Project will follow the requirements of Section 20-3.12 – Care of Excavated Material for trenching within the streets and Section 14-1.13 – Appendix Chapter 33 Excavation and Grading of the Municipal Code.

To ensure that construction trips will not significantly impact the area mitigation measure, **MM TRAF-1** is proposed. Implementing **MM TRAF-1** will ensure that construction trips will be **less than significant with mitigation** and will not significantly impact the roadway system.

MM TRAF-1: Prior to any lane closure or detour, the developer shall submit a Construction Traffic Management Plan per the California M.U.T.C.D. for review and approval by the City Engineer. The plan shall include, but not be limited to, signing, truck routes per the City of Compton Approved Truck Route Map (Figure C-4 of the General Plan Visions 2010), and construction hours of 7:00 a.m. to 7:00 p.m. Monday through Saturday per the Municipal Code Section 7-12. 22 – Construction or Repairing of Buildings, Pile Drivers, Hoists, Steam Shovels of the City of Compton Municipal Code.

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact

CITY CAPITAL IMPROVEMENT PROGRAM (CIP)

There are no CIP projects proposed for West Compton Boulevard, South Kemp Avenue, West 151st Street, and South Dwight Street. Adherence to all Engineering requirements for the adjacent streets will ensure no impact on the City's CIP, directly, indirectly, and cumulatively.

HIGHWAY SAFETY IMPROVEMENT PROJECT GRANTS FOR COMPTON BOULEVARD

The City has received funding from two Highway Safety Improvement Project grants (HSIP Cycle 7 and 8) to improve Compton Boulevard. The Cycle 7 grant includes the installation of raised medians and Class II bicycle lanes on Compton Boulevard from Willowbrook Avenue to eastern City limits. The Cycle 8 grant includes the installation of bike lanes and lighting, as well as enhanced pedestrian crossings at 15 intersections on Compton Boulevard from Willowbrook Avenue to Central Avenue. Additional street improvements for the entire length of Compton Boulevard to complete both grants will utilize other various funding sources.

The City is currently in the design phase for Compton Boulevard and has not identified the type of street trees that would be included. Therefore, the streetscape for this project will be reviewed by the City for consistency with the development of the grant plans.

LOS ANGELES COUNTY METROPOLITAN TRANSPORTATION AUTHORITY CMP

The Los Angeles County Metropolitan Transportation Authority Congestion Management Program (CMP) designates certain roadways as CMP facilities. West Compton Boulevard, South Kemp Avenue, West 151st Street, and South Dwight Avenue are not covered by the CMP.

Consistent with state statute, all local jurisdictions within Los Angeles County, including the County of Los Angeles, adopted and are currently implementing the Land Use Analysis Program. Generally, jurisdictions adopt resolutions or ordinances based on the model Land Use Analysis Program resolution in Appendix D of the CMP. Future modifications to the jurisdiction's adopted Land Use Analysis Program must be submitted to MTA prior to local adoption. These documents will be kept on file as evidence of local CMP implementation.

Techniques that jurisdictions have found useful in implementing and coordinating Land Use Analysis Program requirements include:

- Incorporating CMP Land Use Analysis Program requirements and related information into project/permit applications and guidance packages provided to project applicants.
- Incorporating a CMP reference into Initial Study checklists.
- Adding CMP-related requirements and information into standard Requests for Proposals and contracts for EIR consultants.
- Adding MTA and other area transit operators to standard mailing lists used for CEQA related notices.

Since this Project does not include any CMP-designated roadways or there would be **no impact** under the CMP's guidelines, directly, indirectly, or cumulatively.

SUMMARY

Therefore, the Project as designed and conditioned will have a **less than significant impact with mitigation**, directly, indirectly, and cumulatively on any program plans, ordinances, or policies addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities.

b) Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	☒	☐

Response:

Coordination with City staff has identified the use of OPR's *Technical Advisory on Evaluating Transportation Impacts in CEQA (2018)*. OPR's Technical Advisory document outlines the screening criteria, a

threshold of significance, and requirements for VMT assessment of land use projects. Outlined in the Technical Advisory, the VMT threshold of significance has been identified as fifteen (15) percent below existing residential VMT per capita. In addition, the document outlines a variety of acceptable mitigation measures. This memorandum utilizes the *California Air Pollution Control Officers Association (CAPCOA) Qualifying Greenhouse Gas Mitigation Measures (2010)* for purposes of mitigation and VMT reduction.

The Project is surrounded by residential uses and will complement the adjacent area. Outlined in the CAPCOA document, travel demand measures are provided, reducing a project's VMT. Of particular note, LUT-01 references an increase in density and its impact on VMT; projects with increased densities reduce greenhouse gas emissions associated with traffic in several ways. Considering the proposed Project's density and applying the LUT-01, the Project's VMT can be reduced by 15.56%. As the Project's density can reduce the proposed Project's VMT by 15.56% (greater than 15%), it is assumed the project will have a **less than significant transportation impact**.

c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☒	☐	☐

Response:

Wherever necessary, roadways adjacent to the proposed project site and site access points should be constructed in compliance with recommended roadway classifications and respective cross-sections in the City of Compton General Plan Circulation Element or as directed by the City Engineer. The City Engineer has reviewed the Project, and the only possible hazard was one of stopping sight distance for the Project Driveways. As such, a Sight Distance Analysis was prepared.

Sight Distance Analysis

A sight distance analysis for the Project driveway has been prepared based on the "stopping sight distance" requirements determined by Topic 201 and Table 201.1 of the *Caltrans Highway Design Manual* (HDM), latest edition. The table below shows the minimum stopping sight distances based on the design speed, as displayed in Table 201.1 of the HDM.

Stopping Sight Distance

Design Speed (mph)	Stopping Sight Distance (ft)
25	**150**
30	200
35	250
40	300
45	360
50	430

Source: Table 201.1, Highway Design Manual (July 2, 2018) Note: mph = miles per hour; ft = feet

In this analysis, the movements being analyzed at the Project Driveway intersections are movements from the exiting vehicles onto West 151st Street. Since there is no posted speed limit on West 151st Street between South Dwight Avenue and South Kemp Avenue, the 85th percentile speed is assumed to be 25 miles per hour.

Exhibit 9 displays the sight distance conditions at the project driveway in relation to the existing sidewalk, striping, and parking on 151st Street. The exhibit shows the required 15-foot setback from the edge of travel way and the 15-feet of sight distance required based on the assumed 85th percentile speed of 25 miles per hour.

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact

As shown in ***Exhibit 9***, the stopping sight distance requirements would be impaired by existing parking 151st Street west and east of the driveways. To meet the stopping sight distance standard, approximately 348 feet of red-curb would need to be painted on the north side of 151st Street.

However, the traffic engineer, TJW, notes that Section 405.1 of the Highway Design Manual recommends that parking restrictions on urban driveways be set per California Manual on Uniform Traffic Control Devices (CA MUTCD) Section 3B.19. Section 3B.19 recommends a clearance of six-feet measured from the curb return should be provided at both sides of a driveway. It is TJW's recommendation that the CA MUTCD guidance be followed and a clearance of 6-feet be provided at both sides of the driveway.

Therefore, with the implementation of mitigation measure, **MM TRAF-2,** the Project will have a **less than significant impact** on sight distance for the driveway on West 151st Street.

MM TRAF-2: Approximately six-feet of red-curb shall be painted on both sides of the driveways and Section 3B.19 of Section 405.1 of the Highway Design Manual standards shall be applied.

d) Result in inadequate emergency access?	☐	☐	☐	☒

Response:

The Project provides adequate access on-site for emergency vehicles (i.e., police and ambulance services) and can be accessed from all four sides by the Fire apparatus. The Project has been reviewed by the City Engineer and the City Fire Department and, as designed, will have **no impact** on emergency access.

XVIII. TRIBAL CULTURAL RESOURCES – Would the project:

a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or	☐	☐	☐	☒

Response:

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
A review of the National Register of Historic Places Geographic Information System, the California Office of Historic Preservation Website, and the City's General Plan found that Compton is located on one of the oldest communities in Los Angeles County, dating back to 1784 when it was once a part of Rancho San Pedro. Archaeological sites exist in the City, but none are located in the area of the subject site. The site has been developed at one time with a convalescent hospital that has since been demolished. The disturbance of the property during this previous construction and demolition did not produce any archaeological resources. Pursuant to AB 52 and SB 18 consultation with California Native American tribes requesting consultation within the City commenced on April 19, 2021. The six (6) tribes notified of this Project include the following tribes. • Gabrieleno Band of Mission Indians - Kizh Nation • Gabrieleno/Tongva San Gabriel Band of Mission Indians • Gabrielino/Tongva Nation • Gabrielino Tongva Indians of California Tribal Council • Gabrielino Tongva Tribe • Soboba Band of Luiseño Indians The 60-day response period for AB 52 will end on June 18, 2021. The 90-day response period for SB 18 will end on July 19, 2021. The City will consult with all tribes requesting a consultation and will coordinate the appropriate mitigation, if any into this environmental review. Therefore, there will be **no impact** on listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k).				
ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☐	☐	☒
Response: As noted above, archaeological sites exist in the City; however, none are located in the subject site as the site has been developed at one time with a convalescent hospital that has since been demolished. The disturbance of the property during this previous construction and demolition did not produce any archaeological resources. As well, the City has started both AB 52 and SB 18 and AB 52 Tribal Consultations as noted above. The disturbance of the property during this previous construction and demolition did not produce any archaeological resources. Therefore, it is anticipated the Project will have **no impact** on resources significant to a California Native American Tribe.

7. Phase II Environmental Site Assessment 930 Compton Boulevard – prepared by Stantec Consulting Services, Inc., May 8, 2019				
XIX. UTILITIES AND SERVICE SYSTEMS – Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☒	☐

Response:

Water

See also responses Section X above and XIX b) below for additional information.

Water Supply Assessment

Senate Bill (SB) 610 (Chapter 643, Statutes of 2001; Water Code Sections 10910–10915) made changes to the Urban Water Management Planning Act to require additional information in UWMPs if groundwater is identified as a source available to the supplier. The information required includes a copy of any groundwater management plan adopted by the supplier, a copy of the adjudication order or decree for adjudicated basins, and if non-adjudicated, whether the basin has been identified as being over-drafted or projected to be over-drafted in the most current DWR publication on that basin. If the basin is in overdraft, that plan must include current efforts to eliminate any long-term overdraft. A key provision in SB 610 requires that large development projects supplied with water from a public water system and subject to CEQA be provided a specified water supply assessment, except as specified in the law. Large development projects include 500 or more residential units, 500,000 square feet of retail, commercial space, or 250,000 square feet of office commercial space. These assessments, prepared by "public water systems" responsible for service, address whether there are adequate existing or projected water supplies available to serve proposed projects, in addition to urban and agricultural demands and other anticipated development in the service area in which the project is located.

SB 221 (Chapter 642, Statutes of 2001; Government Code Section 66473.7) prohibits approval of subdivisions consisting of more than 500 dwelling units unless there is verification of sufficient water supplies for the project from the applicable water supplier(s). This requirement also applies to approvals that would increase the number of service connections by 10% or more for public water systems with less than 500 service connections. The law defines criteria for determining "sufficient water supply," such as using normal, single-dry, and multiple-dry year hydrology and identifying the amount of water that the supplier can rely on to meet existing and future planned uses. Rights to extract additional groundwater, if used for the project, must be substantiated.

The Project proposes 60 townhomes served by the City of Compton Municipal Water District (CMWD). Since the Project proposes less than 500 dwelling units, a water supply assessment (WSA) was not required.

The City of Compton Municipal Water District (CMWD) has two major sources of water. It currently has access to 5,780 acre-feet of groundwater that is supplied via seven (7) wells. Water is pumped from these wells and flows into a grid system, distributed using a gravity-fed system via 163 miles of 2 to 24-inch diameter pipes. In addition, the Metropolitan Water District of Southern California (MWD) supplies approximately 30-60% of the City's water demand. MWD has three active interconnections to the City. The purchased water from MWD augments the water from the wells via the distribution system and flows into four 3-million-gallon welded steel-plate storage tanks for a total of 12,000 million gallons of storage. These tanks take up any fluctuations in system pressure or flow deficiencies.

CMWD will provide water to the site via one (1) six (6)-inch point of connection in West 151st Street at the westernmost driveway and one connection in Compton Boulevard. Per the CMWD's 2010 Urban Water Management Plan (UWMP), CMWD has the supply needed to meet the demand of its customers through 2030 based on the land use designations of the General Plan Vision 2010. The conclusion is

based on the Metropolitan Water District (MWD) assurances that it would be able to supply member agency demands and the reliability of local groundwater supplies achieved through groundwater management plans. CMWD has committed to providing service to the planned uses of the General Plan, and this Project is consistent with the City's General Plan. The Project will not require or result in the relocation or construction of new or expanded water lines or facilities, which could cause significant environmental effects. Therefore, the Project will have a **less than significant effect**, directly, indirectly, or cumulatively, on water facility expansion.

Wastewater Treatment

See also response Section X above and XIX c) below for additional information.

Sanitary sewage from the Project site will be connected to the existing 12-inch sanitary sewer line located in West Compton Boulevard through the new lines proposed within the newly created streets within the Project. The wastewater will then be transported to the Los Angeles County Sanitation District (LACSD) sewage system.

Wastewater in the City of Compton is collected by the LACSD sewage system and sent to one of eleven treatment or wastewater plants. At these plants, the wastewater goes through a three-stage treatment process consisting of primary, secondary, and tertiary treatment stages. After tertiary treatment, water is available for use to recycled water customers, use for groundwater recharge, or discharged into the ocean. Although the City of Compton is not part of a recycled water system, wastewater collected from the City is treated to recycled water standards and can be distributed through the LACSD's recycled water supply system.

LACSD implements all requirements of the Regional Water Quality Control Board pertaining to water quality and wastewater discharge. LACSD's Recycled Water System accepts approximately 500 million gallons per day of wastewater, which is sent to 11 wastewater treatment plants. The treated water is distributed throughout the recycled water distribution system.

LACSD has the capacity to process the wastewater planned under the General Plan Vision 2010, and this Project is consistent with the General Plan Vision 2010. The addition of the proposed Project will not significantly impact LACSD's capacity, and impacts associated with wastewater treatment will be **less than significant**, directly, indirectly, and cumulatively.

All new development is required to comply with all provisions of the NPDES program and the City's Municipal Separate Sewer Permit (MS4), as enforced by the Regional Water Quality Control Board (RWQCB). The Project is consistent with the General Plan proposing residential units. Compliance with the City's, LACSD's, all Waste Discharge Requirements outlined by the RWQCB, as well as requirements included in the NPDES permit, SWPPP, LID, and wastewater conveyance standards would ensure that wastewater discharges coming from the Project site and treated by the wastewater treatment facility system would not exceed applicable RWQCB wastewater treatment requirements or capacity. Impacts would be **less than significant with mitigation**, directly, indirectly, or cumulatively.

Storm Water Drainage

The existing site is currently vacant, pervious land. Elevations onsite range between approximately 81 feet to 85 feet above mean sea level, with a relative low point near the site's northeast corner. Existing site drainage is generally directed as sheet flow in the northeast direction and overflows into the rights-of-way of West Compton Boulevard and South Kemp Avenue. Within West Compton Boulevard and South Kemp Avenue, two (2) existing catch basins capture and convey stormwater to an existing Los Angeles County Flood Control District (LACFCD) 66" storm drain facility within West Compton Boulevard, which flows in the easterly direction and outlets to the existing Compton Creek. Compton Creek drains to the existing Los Angeles River and ultimately the Pacific Ocean at San Pedro Bay.

Proposed site drainage will be collected and conveyed by two (2) proposed curb-inlet catch basins and an area drain system to two (2) proposed underground detention systems, which will discharge to the existing LACFCD 66" storm drain at two (2) points of connection. Low flows will be directed to proposed

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact

Modular Wetlands System (MWS) Biofiltration Vaults for water quality treatment prior to entering the proposed detention systems. During larger storm events, stormwater runoff will bypass the treatment systems and be conveyed directly to the proposed detention system. The detention system will be equipped with an orifice to mitigate the peak discharge rate to the allowable peak flow rate (Allowable Q) provided by the Los Angeles County Department of Public Works (LACDPW). Excess flows will be temporarily detained as they are released at the Allowable Q. Refer to Appendix H of the Preliminary Hydrology and Hydraulics Study for the Allowable Q provided by LACFCD.

The Project will comply with the requirements of Chapter 31 – Runoff Pollution Control of the Municipal Code. As such, a Preliminary Low Impact Development (LID) Plan has been prepared consistent with the Los Angeles County Department of Public Works LID Manual and the intent of the NPDES storm-water requirements (State Water Resources Control Board (SWRCB) National Pollutant Discharge Elimination System (NPDES) General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities, Order No. 2009-0009-DWQ, NPDES No. CAS000002, dated July 1, 2010.

The Project will not impact the existing stormwater management systems significantly. The Project will result in an incremental increase in the volume of stormwater; however, the City will require that the incremental increase in volume be managed on-site. The preparation of site-specific hydrology studies, water management plans, and Project design and compliance with existing federal, state, and local water quality laws and regulations related to water quality standards will ensure a **less than significant impact,** directly, indirectly, and cumulatively to stormwater facilities.

Electric Power

Electric power is provided to the site by Southern California Edison (SCE). The Project will utilize a 400-amp service for the 5-plex buildings and an 800-amp service for the 10-plex buildings. The services will be connected to existing 12kV 120/208, 3-phase distribution lines in West Compton Boulevard. SCE has committed to providing service to the planned uses of the General Plan, and this Project is consistent with the City's General Plan. The Project will not require or result in the relocation or construction of new or expanded electric power, which could cause significant environmental effects. Therefore, the Project will have a **less than significant** effect on electric power expansion.

Natural Gas

The Project will not utilize natural gas. Southern California Gas Company has natural gas lines in West Compton Boulevard (four-inch) and within the adjacent streets (two-inch). The Project will not require or result in the relocation or construction of new or expanded natural gas facilities power, which could cause significant environmental effects. Therefore, the Project will have a **less than significant** effect on natural gas facility expansion.

Telecommunications Facilities

Both Charter and AT&T have lines on the existing 80-foot high poles along West Compton Boulevard. These lines are to be protected in place. Therefore, the Project will have a **less than significant** effect on telecommunication facility expansion.

Summary

As noted above and in responses Section X and XIX b) above of this document, the Project will be **less than significant** directly, indirectly, or cumulatively, on the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects.

b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	☐	☐	☒	☐

Response:

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact

The Project proposes 60 townhomes; a water supply assessment from CMWD, the water purveyor, is not required.

As noted above, the water usage for the Project is consistent with the predicted use and growth identified in the UWMP, insofar as the CMWD based its planning on land use designations in its service district.

The Project will tie into existing domestic water lines in West 151st Street. No new wells or additional water infrastructure, or entitlements will be required.

The Project will be required to implement all water conservation measures imposed by CMWD under normal and drought conditions over the life of the Project. The Project will be required to implement any emergency measures in effect when the Project is developed.

As the Project is consistent with the General Plan Vision 2010 upon which CMWD has made their assumptions for planned water availability and compliance with all State and local regulations, impacts to water supplies will be **less than significant**, directly, indirectly, and cumulatively.

c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☒	☐

Response:

See also response Section X and XIX a) above for additional information.

Sanitary sewage from the Project site will be connected to the existing 12-inch sanitary sewer line located in West Compton Boulevard through the new lines proposed within the newly created streets within the Project. The wastewater will then be transported to the Los Angeles County Sanitation District (LACSD) sewage system.

The Project will be served by the Los Angeles County Sanitation District (LACSD) sewer infrastructure. C&V Consulting, Inc. has prepared a Sewer Area Study. The existing sewer system analyzed in the area study has a design capacity above the calculated cumulative flow. The peak discharge at the downstream end of the sewer system 15" pipe entering the County Sanitation District No. 1 existing 31.3" sewer trunk main is calculated to be a rate of 1.8465 cfs with a flow depth of 7.61 inches. Refer to Appendix B of the Sewer Area Study for calculations and tabulated results. Therefore, it is concluded that the existing sewer system has adequate capacity for the proposed development.

Wastewater in the City of Compton is collected by the LACSD sewage system and sent to one of eleven treatment or wastewater plants. At these plants, the wastewater goes through a three-stage treatment process consisting of primary, secondary, and tertiary treatment stages. After tertiary treatment, water is available for use to recycled water customers, use for groundwater recharge, or discharged into the ocean. Although the City of Compton is not part of a recycled water system, wastewater collected from the City is treated to recycled water standards and can be distributed through the LACSD's recycled water supply system.

LACSD implements all requirements of the Regional Water Quality Control Board pertaining to water quality and wastewater discharge. LACSD's Recycled Water System accepts approximately 500 million gallons per day of wastewater, which is sent to 11 wastewater treatment plants. The treated water is distributed throughout the recycled water distribution system.

LACSD has the capacity to process the wastewater planned under the General Plan Vision 2010, and this Project is consistent with the General Plan Vision 2010. Compliance with the City's, CMWD's, all Waste Discharge Requirements outlined by the RWQCB, as well as requirements included in the NPDES permit, SWPPP, LID, and wastewater conveyance standards would ensure that wastewater discharges coming from the Project site and treated by the wastewater treatment facility system would not exceed applicable RWQCB wastewater treatment requirements or capacity. Impacts would be **less than significant**, directly, indirectly, or cumulatively.

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☒	☐

Response:

Republic Services will provide trash collection. Republic Services transports solid waste local transfer stations for recycling, with the non-recyclable waste disposed of at local landfills. With the implementation of the City's and Republic Services recycling programs, the City continues to divert waste from the landfill. Therefore, landfill capacity is available to accommodate this Project, and the Project will have a **less than significant impact**, directly, indirectly, and cumulatively on landfills.

e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☐	☒

Response:

Federal, State, and local statutes and regulations regarding solid waste generation, transport, and disposal are intended to assure adequate landfill capacity through mandatory reductions in solid waste quantities (for example, through recycling and composting of green waste) and the safe and efficient transportation of solid waste. The Project will comply with all regulatory requirements regarding solid waste, including AB 939 and AB 341. AB 939, which the California Department of Resources Recycling and Recovery administered, required local governments to achieve a landfill diversion rate of at least 50 percent by January 1, 2000, through source reduction, recycling, and composting activities. Moreover, AB 341 increases the minimum solid waste diversion rate to 75 percent by 2020. Such regulations will apply to this Project, and compliance is mandatory. Further, mandates set forth by the CALGreen Code aim to reduce solid waste generation and promote recycling and diversion design and activities, to which this Project is required to comply. There will be **no impacts,** directly, indirectly or cumulatively, regarding compliance with Federal, State, and local statutes and regulations related to solid waste.

XX. WILDFIRE – If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, **would the project:**				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒

Response:

As stated in the response in Section IX above, the City's Emergency Operation Plan describes the City's process for responding to emergencies or disasters.

Project access will be provided by two driveways off West 151st Street and then via the internal street system. The proposed Project will not alter the existing circulation pattern in the Project area. Emergency access and evacuation routes will be unaffected by the proposed Project.

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
The Project provides adequate access for emergency vehicles, including adequate street widths and vertical clearance on new streets. Implementation of federal, state, and local laws and regulations in this Project's construction ensures **no impact** on an adopted emergency response plan or evacuation plan.				
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☐	☒
Response: In addition to response Sections VII and IX above, the Project site is not located within a Very High Fire Hazard Classification area. As well, the site is relatively flat and surrounded by residential uses. Therefore, the Project will not exacerbate wildfire risks and will have **no impact**, directly, indirectly, or cumulatively, to the exposure of pollutant concentration from a wildfire or the uncontrolled spread of a wildfire.				
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts on the environment?	☐	☐	☐	☒
Response: The Project will not require the installation or maintenance of the associated infrastructure that would exacerbate fire risk or that may result in temporary or ongoing impacts on the environment and as such, will have **no impact**, directly, indirectly, or cumulatively.				
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☐	☒
Response: See Sections VII and IX above. The Project site is not located within a Very High Fire Hazard Classification area. The site is situated on relatively level ground and is not immediately adjacent to any slopes or hillsides that could be potentially susceptible to slope instability. No signs of slope instability in the form of landslides, rockfalls, earth flows, or slumps were observed at or near the subject site during Sladden's investigation. The Project site is not located within a 100-year mapped flood zone (FEMA Flood Insurance Rate Map No. 06037C1815F (September 26, 2008). The Project would redirect on-site drainage patterns; however, it would not impede or redirect flood flows. As referenced, all drainage would be managed to ensure pre-construction flows off-site are maintained. The Project would not expose people or structures to flood hazards from severe storm events. Therefore, the Project will have **no impact**, directly, indirectly, or cumulatively, as it is not expected to have a wildland fire on site and therefore, will not expose people or structures to significant risk from flooding or landslides as a result of a post-wildfire.				
Sources: 1. Compton General Plan Vision 2010, adopted December 3, 1991 2. Chapter 30 – Zoning of the Compton Municipal Code 3. Chapter 14 – Building and Housing of the Compton Municipal Code 9. Chapter 20 – Streets and Sidewalks of the Compton Municipal Code • Section 20-3 – Street Excavations • Section 20-6 – Temporary Street Closures				

ISSUES & SUPPORTING INFORMATION SOURCES:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
10. Los Angeles County Local All-Hazards Mitigation Plan – adopted 2014 • Figure 7-1 – Los Angeles County Very High Fire Hazard Severity Zones 4. Geotechnical Investigation 930 West Compton Boulevard – prepared by Alta California Geotechnical Inc., May 6, 2019 5. Sewer Area Study TTM No. 82807– prepared by C&V Consulting, Inc., September 2019, April 2021				
XXI. MANDATORY FINDINGS OF SIGNIFICANCE				
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☐	☐	☒
Response: In Section IV (Biological Resources), and Sections V (Cultural Resources), and XVIII (Tribal Cultural Resources), it is noted that the Project was once developed with a convalescent hospital and is surrounded by urban development. As such, the site does not provide biological habitat. Due to the previous ground disturbance, the Project will have **no impact** on biological resources or eliminate important examples of significant periods of California history or pre-history.				
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)?	☐	☐	☒	☐
Response: The Project will contribute to the cumulative impacts of development in the City of Compton and the broader area. However, the Project is in conformance with the City's General Plan, and therefore, it will have a **less than significant** impact cumulatively.				
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☒	☐	☐
Response: Effects on human beings were evaluated as part of the Air Quality, Energy, Geology and Soils, Greenhouse Gas Emissions, Hazards, and Hazardous Materials, Hydrology and Water Quality, Land Use/Planning, Population and Housing, Public Services, Recreation, and Utilities sections of this Initial Study and were found to be **less than significant** for each of the above sections. The effects on human beings were evaluated as part of the Aesthetics, Noise, Transportation, and Wildfire sections of this Initial Study and were found to be **less than significant with mitigation**. Based on the analysis and conclusions in this Initial Study, the Project will not cause substantial adverse effects, directly or indirectly, to human beings. Therefore, potential direct and indirect impacts on human beings that result from the proposed Project are **less than significant with mitigation measures MM AES-1, MM AES-2, MM NOI-1** through **MM NOI-6,** and **MM TRAF-1** and **MM TRAF-2.**

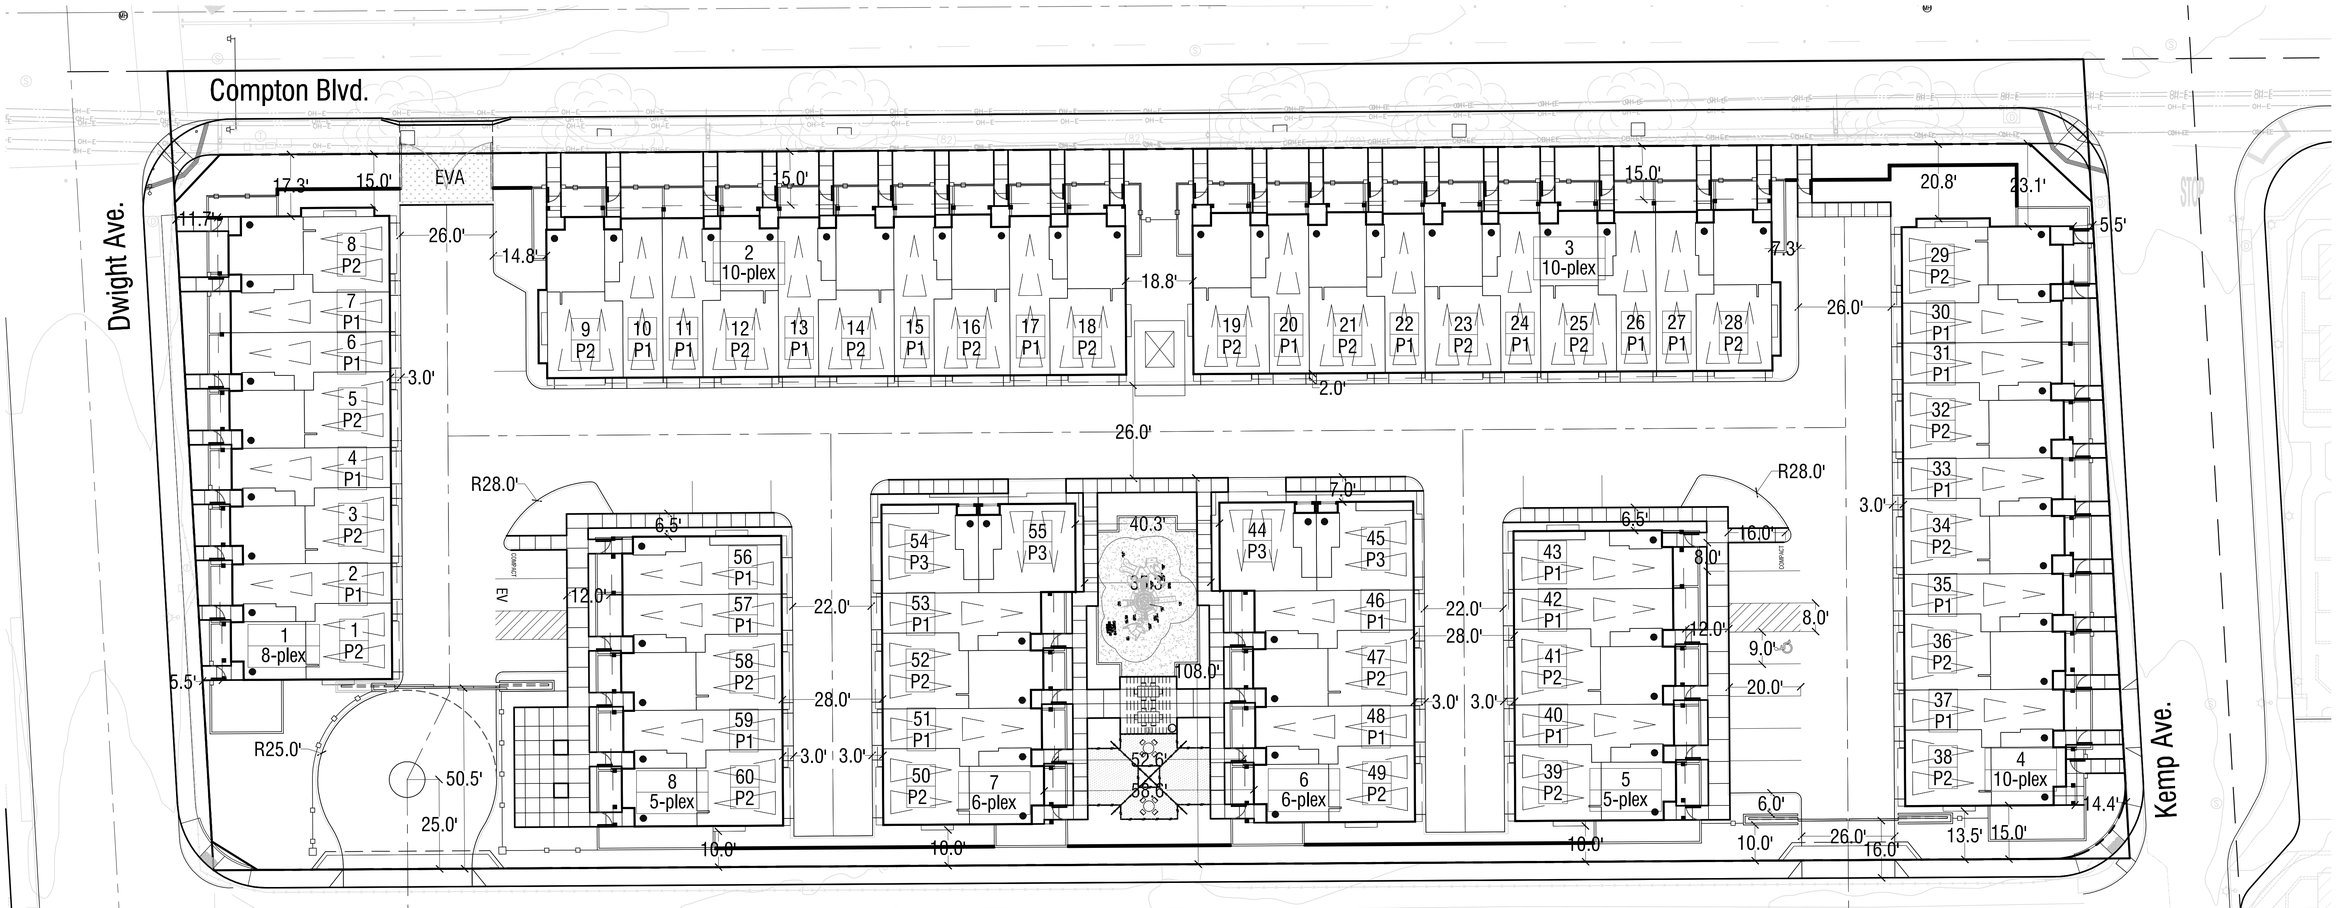
File No.:



Project Summary

Total Site Area: ± 2.45 Acres (± 107,051 SF)

Total Units: 60 Homes
- (29) Plan 1: ± 1,404 SF, 3 bedroom, 3 bath (tandem)
- (27) Plan 2: ± 1,664 SF, 4 bedroom, 4 bath, opt. flex (s/s)
- (4) Plan 3: ± 1,450 SF, 3 bedroom, 2.5 bath

Density: 24.5 Homes per Acre

Parking:

Required: 135 Spaces (2.25 spaces per home)
- (60) Homes x 2.0 Spaces = 120 Spaces
- (60) Guest x 0.25 Spaces = 15 Spaces

Provided: 135 Spaces (2.25 spaces per home)
- Garage: 120 Spaces
- Head In: 8 Spaces (9' x 20')
- Parallel: 5 Spaces (9' x 22')
- Compact: 2 Spaces (8'x16')

Open Space:

Provided: 20,867 SF Total (± 348 SF per home)
- Common: 7,284 SF (10' Min. Dimension)
- Private: 13,583 SF (5' Min. Dimension)
  - Ground: 8,341 SF
  - Deck: 5,242 SF

Lot Coverage: 42,533 SF (39.7% of site)

Zoning Summary

Existing General Plan: Medium Density Residential
Proposed General Plan: General Commercial

Existing Zoning: CL - Limited Commercial & P - Parking
Proposed Zoning: CL - Limited Commercial

Max. Density: 1,500 SF / home

Required Setbacks:
- Front Yard - Compton Blvd: 15' to building
- Street Side Yard - Dwight Ave: 5' to building
- Street Side Yard - Kemp Ave: 5' to building
- Rear Yard - 151st St: 10' to building

Max. Building Height: 75'

Notes:

1. Site plan is for conceptual purposes only.
2. Site plan must be reviewed by planning, building, and fire departments for code compliance.
3. Base information per civil engineer.
4. Civil engineer to verify all setbacks and grading information
5. Building Footprints might change due to the final design elevation style.
6. Open space area is subject to change due to the balcony design of the elevation.
7. Building setbacks are measured from property lines to building foundation lines.

WS-W1408

PRODUCT DESCRIPTION
A luminous architectural profile and superior construction make this wall sconce appropriate for transitional and contemporary interiors or exteriors. Options allow for shade/lens specifications across residential and commercial interior and exterior applications.

FEATURES
- 2700K and 3500K CCT option available for special order.
- ASLED dimmerless technology
- White ceramic silk-screened milked glass
- 277V option available for special order.

SPECIFICATIONS

Rated Life	54000 Hours
Standards	ETL, cETL Wet Location Listed, IP66, Title 24 JA8: 2019 Compliant
Input	120 VAC, 50/60Hz
Dimming	ELV
Color Temp	3000K
CRI	90
Construction	Aluminum with white inlayed glass

REPLACEMENT PARTS
RPL-GLA-1408-01 - Outer Glass
RPL-GLA-1408-02 - Inner Glass

Model & Size	Color Temp	Finish	LED Watts	LED Lumens	Delivered Lumens
WS-W1408 8"	3000K	AL Brushed Aluminum	12.6W	1050	819
	3500K	BK Black	12.6W	1050	819
	3000K	BZ Bronze	12.6W	1050	819

Example: WS-W1408-BZ
•For 277V special order, add an "F" before the finish: WS-W1408F-AL
•For 2700K add "-27" (3500K add "-35") before the finish: WS-W1408-27-BZ

SOLID STATE AREA LIGHTING

DSAP SERIES - VLED

PROJECT NAME:
FIXTURE TYPE: Type "A/A1"

FEATURES

Luminaire
Upper housing is heavy gauge cast aluminum (min. 125" wall alloy a413 (3% Cu for 25#/25) or spun aluminum with uniform (.125 min. wall for DSAP20). Lower housing is 0.080" thick spun aluminum with integrated LED module shelf. Lower housing is vented at top and bottom for convective cooling of LED module. Top Driver chamber is formed from LED Module chamber. Trunnion ball cradling mount is welded to housing and facilitates quick leveling and installation.

VLED Optics
Low engine (AL5X Alloy; <3.2% Cu) cast aluminum housing integrated clear tempered glass lens sealed with a continuous silicone-injected protects emitters (LEDs). Reflector-Prism optics and seals this module from water intrusion and environmental contaminants. Module is sealed to meet an IP67 rating. Each emitter is optically controlled by a Reflector-Prism injection molded from H-12 acrylic. Optics are modular, less than 0° - 50° one from 50° - 107°, one from 81° - 72°). Each Reflector-Prism is secured to an optical plate with a UV curing adhesive. Each Reflector-Prism is indexing pins for precise aiming. This optical plate houses every Reflector-Prism over an emitter, one inserted to the optical plate form above and are secured with a UV curing adhesive. The Reflector-Prisms are arrayed to produce IES Type II, III, V, and V-SQ distributions. The entire Optical Module is field rotatable in 90° increments. Both module and drivers are factory wired using water resistant, insulated cord.

LED Emitters
High output LED's are utilized with drive currents ranging from 350mA to 700mA. (CCB Minimum LED's are available in standard Neutral White (4000K), or optional Cool White (5000K) or Warm White (3000K). Consult Factory for other LED options.

LED Driver
Constant current programmable electronics with a power factor of >.95 and a minimum operating temperature of -40°F/-40°C. Driver(s) is/are UL and cUL recognized. Inner terminal blocks facilitate wiring between the driver and optical arrays. Drivers accept an input of 120-277V .50/60Hz or 347V-480V .50/60Hz. 0-10V dimmable driver is standard. Driver has a minimum of 3kV internal surge protection. Luminaire supplied with 20kV surge protector for field installation.)

Amber LED's
TCA (Phosphor Converted Amber) LED's utilize phosphors to create color output similar to LPS lamps and have a slight output in the yellow/amber (depth: 194, Dmp Amber). LED's utilize multi-chip that emits light in the amber spectral bandwidth only without the use of phosphors.

Finish
Polyester powder coat inappropriate, four step iron phosphate process to prepare metal surfaces for maximum adhesion. Top coat is baked at 400°F for maximum hardness and exterior durability.

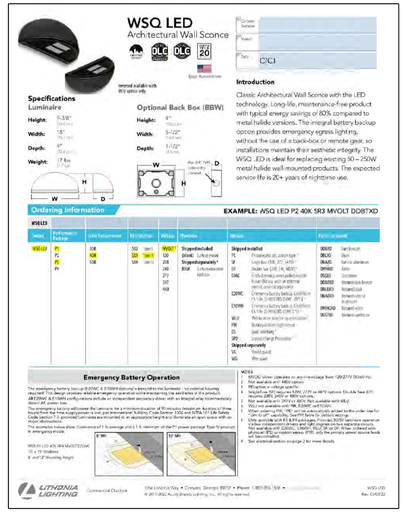
NL Down & Up/Down Light

DESIGNER SERIES

Wall-mounted, geometric square down light in 3, 6, or 9 LED. Available in aluminum or brass construction. RGBW option available for use with Luxor® lighting control systems.

Quick Facts
- Down or up/down configurations
- Die-cast aluminum or brass
- Natural, powder coat, or antique brass/copper finishes
- Cree® integrated LEDs
- Tamper-resistant features
- Color temperature filters
- Compatible with Luxor technology
- Phase and PWM dimmable
- Input voltage: 10-15V

LANDSCAPE & ARCHITECTURAL LIGHTING



WSQ LED

Architectural Wall Sconce

Easy Assembly

Introduction
Classic Architectural Wall Sconce with the LED technology. Long-life, maintenance-free product with typical energy savings of 80% compared to metal halide versions. The integral battery backup option provides emergency egress lighting, without the use of a back-box or remote gear, so installations maintain their aesthetic integrity. The WSQ LED is ideal for replacing existing 50 – 250W metal halide wall-mounted products. The expected service life is 20+ years of nighttime use.

Specifications
Luminaire
Height: 9-3/8" (238mm)
Width: 8" (203mm)
Depth: 6" (152mm)
Weight: 7 lbs (3.2kg)

Optional Back Box (BBW)
Height: 6" (152mm)
Width: 5-1/2" (140mm)
Depth: 1-1/2" (37mm)

Ordering Information
EXAMPLE: WSQ LED P2 40K SR3 MVOLT DDBTXD

WSQ LED	Performance Option	Color Temperature	Electrical Option	Wattage	Mounting	Options	Finish (required)
WSQ LED	P1	30K	347 (ex.)	10W (ex.)	Shipped included	Shipped installed	DDBXD Dark Bronze
	P2	40K	480 (ex.)	15W (ex.)	SRA Surface mount adapter	PE Photocontrol, all cutoff type 1	DBLXD Black
	P3	50K		20W (ex.)	Shipped separately*	Under bar (UB, 2", 4", 6")	BNAXD Bronze
				30W (ex.)	SRB Architectural wall mount adapter	Under bar (UB, 2", 4", 6")	DWHXD Textured White
						Emergency battery backup (CSAXD) (120, 277, 347V)	SSXD Sandstone
						Emergency battery backup (CSAXD) (120, 277, 347V)	BNTXD Textured Bronze
						Motion sensor (see for specifications)	DBLBXD Textured Black
						Shipped separately	AWHXD Textured Architectural White
						Finish (paint)	DNAXD Textured Natural Aluminum
						Rain cap	

Emergency Battery Operation

NOTES
1. MVOLT driver operates in any input voltage from 120-277V (50/60 Hz).
2. Not available with 480V option.
3. Not available with P3 and 50K.
4. Weight for 347 requires 120V, 277V or MVOLT options. DLC4 Type 3 V1 requires 208V, 240V or 480V options.
5. Not available with SRA. Must be ordered with WSQ.
6. Not available with "PE, 3 CSAXD" or "SRB".
7. When ordering PE, "PE" will be added to WSQ as last to the order. See for PE Photocontrol Options. Ex: WSQ LED P2 40K SR3 MVOLT PE.
8. Only available in P2 & P3 wattages. Provides 50/50 emergency operation (requires independent drivers and light engines on two separate circuits. Ex: WSQ LED P2 40K SR3 MVOLT DDBTXD 2@50. Specify 2@50 for 50% operation or 2@75 for 75% operation. Specify 2@100 for 100% operation. Specify 2@100 for 100% operation. Specify 2@100 for 100% operation.
9. See electrical section on page 2 for more details.

TJW ENGINEERING, INC.
TRAFFIC ENGINEERING & TRANSPORTATION PLANNING CONSULTANTS

Ms. Kim Prijatel
CITY VENTURES
3121 Michelson Drive, Suite 150
Irvine, CA 92612

Subject: **Traffic & Parking Analysis: Compton & Kemp Residential Project – Supplemental Traffic Analysis**

Dear Ms. Prijatel,

TJW ENGINEERING, INC. (TJW) is pleased to submit this supplemental traffic analysis for the proposed Compton & Kemp residential project in the City of Compton. The project site is bound by Compton Boulevard to the north, Kemp Avenue to the east, W 151st Street to the south and Dwight Avenue to the west. A Traffic Impact Analysis was completed for the project in September 2019. Since then, the proposed project has been modified from 24 single-family dwelling units to 60 multi-family dwelling units. This supplemental traffic analysis is to provide an overview of the modifications to the proposed project. The project is anticipated to be built and generating trips in 2022. Site access is planned at two driveways on W 151st Street. The Project's site plan is shown in **Exhibit 1**.

All methodologies outlined in the September 2019 study are followed and utilized in this memorandum, including trip distribution. The 2019 peak turning movement volumes were used in this report and a 2% annual growth was applied to the 2019 data to establish the project baseline year for 2021.

Trip Generation Analysis

Table 1 shows the revised trip generation of the proposed project. Dwight Avenue at Compton Boulevard was the study intersection previously analyzed for its level of service which include the following study scenarios; project baseline year, opening year without project, and opening year with project. The proposed project's anticipated trip generation has increased by 212 daily trips 10 AM peak hour trips and 10 PM peak hour trips from the September 2019 study.

Table 1: Trip Generation

Proposed Land Use[1]	Quantity	Unit[2]	Daily Trips (ADTs)		AM Peak Hour			PM Peak Hour		
			Rate	Volume	Volume			Volume		
					In	Out	Total	In	Out	Total
Multifamily Housing (Low-Rise) (220)	60.0	DU	7.32	439	6	20	28	21	12	34

1: Rates from ITE Trip Generation (10th Edition, 2017).
2: DU = Dwelling Units

Traffic Analysis – Level of Service (LOS)

Traffic volumes consist of (2019) traffic counts plus application of an annual ambient growth rate to establish the project baseline year, which in this case is (2021). The ambient growth rate used in this analysis is based on feedback provided on the scoping letter, which recommended a growth rate of 2% per year, applied for two years, to the (2019) traffic counts to account for ambient traffic growth.

Project baseline year traffic volumes (2021) = ((2019) traffic counts * 1.02^2)

Project opening year traffic volume conditions include another 2.0 percent growth rate projected trips associated with ambient growth and any nearby cumulative projects, consistent with the September 2019 traffic impact analysis.

Project opening year traffic volumes (2022) = (project baseline year traffic volumes (2021* 1.02)

The intersection analysis AM and PM peak hour results are shown in ***Table 2***. ICU analysis sheets are attached to the Appendix for reference.

Table 2: Intersection Analysis

Int	N/S	E/W	Control Type	Peak Hour	Target LOS	Project BaselineYear (2021)		Opening Year Without Project (2022)		Opening Year With Projet (2022)		Change	Impact?
						ICU/Delay[1]	LOS	ICU/Delay[1]	LOS	ICU/Delay[1]	LOS		
1	Dwight	Compton	Signal	AM	E	0.420	A	0.426	A	0.432	A	0.006	No
				PM		0.425	A	0.432	A	0.434	A	0.002	No

Note: ICU = Intersection Capacity Utilization. Delay shown in seconds for worst performing stop-controlled movement at driveways

As shown in ***Table 2***, the intersection is currently operating at an acceptable level of service for both AM and PM peak hours. The intersection is projected to continue to operate at an acceptable level of service during the AM and PM peak hours for project opening year (2022) without and with project conditions. Based on the City of Compton's threshold of significance, the opening year with project (2022) conditions is not projected to have a significant impact at the study intersection.

Parking Analysis

The proposed project has been changed from 24 single-family dwelling units to 60 multi-family dwelling units. *Table 30.-21.A Parking Space Requirements* in the City of Compton Zoning Code contains minimum parking requirements for various land uses in the City.

Condominiums and townhouses are required to provide two enclosed spaces per dwelling unit plus one guest space for every four units. The proposed project would be required to provide 120 enclosed parking spaces and 15 guest spaces. A total of 135 parking spaces are being proposed for the 60 multifamily dwelling units, meeting city parking code requirements.

As reported in the September 2019 study providing access to the proposed project will result in a loss of 6-8 on-street parking spaces on the north side of 151st Street between Dwight Avenue and Kemp Avenue due to the construction of two driveways with 6-feet of red curb on both sides of the driveways.

TJW collected on-street parking counts on the streets surrounding the project site in the afternoon and evening on Wednesday June 19th, 2019 from 4:00 PM to 12:00 AM to assess the existing parking inventory and occupancy. Evening hours were chosen since the overnight period is the peak period of parking demand for the residential uses adjacent to the site. Since the on-street parking supply is not striped, the inventory of each block face was projected based on observations in the field. And measurements of curb space.

The parking areas assessed were the south side of Compton Boulevard between Dwight Avenue and Kemp Avenue, both sides of Dwight Avenue between Compton Boulevard and 151St Street, both sides of 151st Street between Dwight Avenue and Kemp Avenue, and both sides Kemp Avenue between Compton Boulevard and 151st Street. A total of 94 on-street parking spaces were observed with a maximum demand of 61 vehicles (65 percent occupancy).

Although the project is expanding the number of dwelling units, the project will provide adequate parking per city parking code requirement. In addition, based on the parking data collection from the September 2019 report, there is adequate on-street parking availability nearby to accommodate any displacement from the loss of 6-8 on-street parking spaces on 151st Street.

VMT Analysis

Senate Bill (SB) 743 was adopted in 2013 requiring the Governor's Office of Planning and Research (OPR) to identify new metrics for identifying and mitigating transportation impacts within the California Environmental Quality Act (CEQA). For land use projects, OPR has identified Vehicle Miles Traveled (VMT) as the new metric for transportation analysis under CEQA. The regulatory changes to the CEQA guidelines that implement SB 743 were approved on December 28th, 2018 with an implementation date of July 1st, 2020 as the new metric.

Coordination with City staff has identified the use of OPR's *Technical Advisory on Evaluating Transportation Impacts in CEQA (2018)*. OPR's Technical Advisory document outlines the screening criteria, threshold of significance, and requirements for VMT assessment of land use projects. Outlined in the Technical Advisory, the VMT threshold of significance has been identified as fifteen (15) percent below existing residential VMT per capita. In addition, the document outlines a variety of acceptable mitigation measures. This memorandum utilizes the *California Air Pollution Control Officers Association (CAPCOA) Qualifying Greenhouse Gas Mitigation Measures (2010)* for purposes of mitigation and VMT reduction.

The project is surrounded by residential uses and will complement the adjacent area. Outlined in the CAPCOA document, travel demand measures are provided which can reduce a project's VMT. Of particular note, LUT-01 references an increase in density and its impact to VMT; project's with increased densities reduces greenhouse gas emissions associated with traffic in several ways. Taking into consideration the proposed project's density and applying the LUT-01, the project's VMT can be reduced by 15.56% (**Table 3**, below). As the project's density can reduce the proposed project's VMT by 15.56% (greater than 15%), it is assumed the project will have a less than significant transportation impact.

Table 3: *Project VMT*

VMT Reductions	
LUT-1 (Increase Density)	15.56%

Subject: Traffic & Parking Analysis: Compton & Kemp Residential Project, City of Compton

Dear Ms. Prijatel:

TJW ENGINEERING, INC. (TJW) is pleased to present you with this revised traffic impact analysis for the proposed **Compton & Kemp Residential** project in the City of Compton.

This traffic study has been prepared to meet the traffic study requirements for the City of Compton and address comments provided on the draft report by City staff on August 8, 2019. This report is being submitted to you for review and forwarding to the City of Compton.

Please contact us at (949) 878-3509 if you have any questions regarding this analysis.

Sincerely,

Thomas Wheat, PE, TE
President

1.0 EXECUTIVE SUMMARY

This traffic impact analysis (TIA) analyzes the projected traffic operations associated with the proposed **Compton and Kemp Residential** project in the City of Compton. The purpose of this TIA is to evaluate potential circulation system deficiencies that may result from development of the proposed project, and to recommend improvements to achieve acceptable operations, if applicable. This analysis has been prepared pursuant to applicable City of Compton/Los Angeles County traffic impact analysis guidelines.

The proposed project is bounded by Compton Boulevard to the north, Kemp Avenue to the east, 151st Street to the south and Dwight Avenue to the west. The proposed project would consist of 24-single family dwelling units. The site, located at 930 West Compton Boulevard, is currently vacant. Site access is planned at two driveways on 151st Street.

The proposed project is anticipated to be built and generating trips in 2021.

The following signalized intersection in the vicinity of the project site has been included in the intersection level of service (LOS) analysis based on submission of a scoping letter and receipt of comments back from City staff.

- Dwight Avenue [runs north-south (NS)] at Compton Boulevard [runs east-west (EW)].

This traffic analysis follows the *Los Angeles County Public Works Traffic Impact Analysis Report Guidelines (January 1, 1997)*.

1.1 SUMMARY OF ANALYSIS RESULTS

No significant impacts are projected in the study area as a result of the proposed project, based on the City of Compton's thresholds of significance. Therefore, the proposed project should not be responsible for implementing any off-site improvements, except for improvements related to the project driveways.

The study intersection is projected to operate at an acceptable LOS (LOS D or better) for all analysis scenarios.

The proposed project will result in the loss of 6-8 on-street parking spaces on the north side of 151st Street between Dwight Avenue and Kemp Avenue based on California Manual on Uniform Traffic Control Devices (CA MUTCD) guidelines for urban driveways. There would still remain adequate on-street parking capacity on the streets adjacent to the proposed project site. The proposed project satisfies minimum off-street parking requirements.

2.0 INTRODUCTION

This traffic impact analysis (TIA) analyzes the projected traffic operations associated with the proposed **Compton and Kemp Residential** project in the City of Compton. The purpose of this TIA is to evaluate potential circulation system deficiencies that may result from development of the proposed project, and to recommend improvements to achieve acceptable operations, if applicable. This analysis has been prepared pursuant to applicable City of Compton/Los Angeles County traffic impact analysis guidelines.

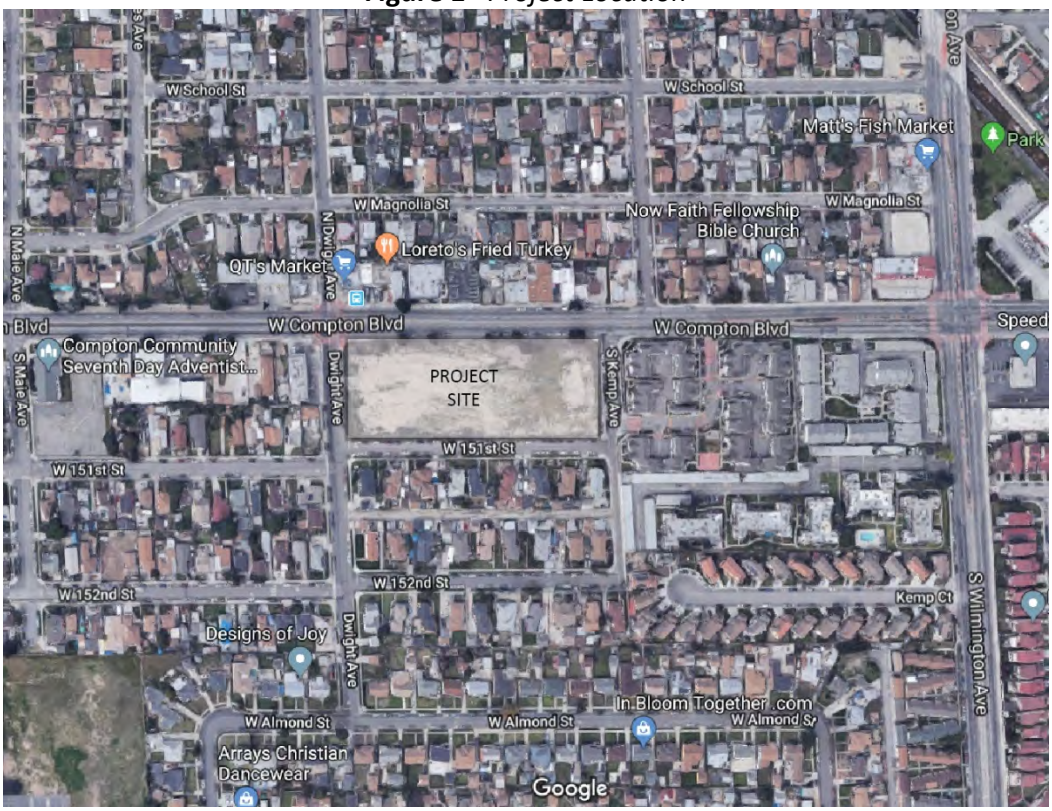
2.1 PROJECT DESCRIPTION

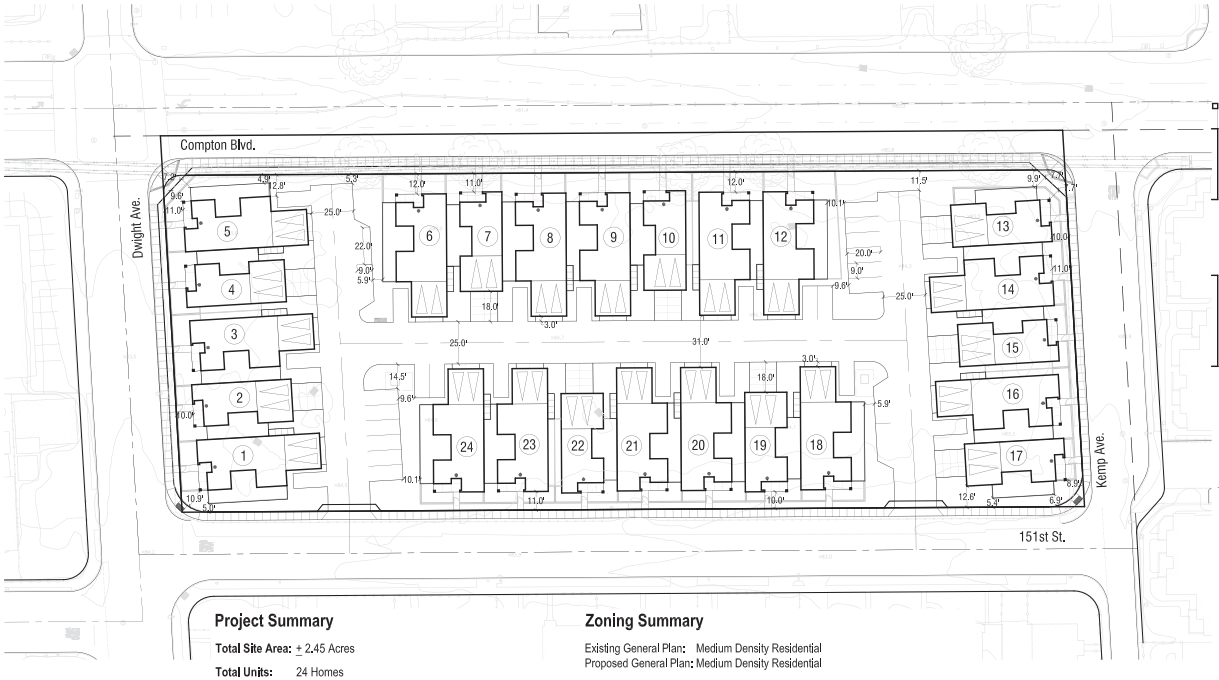
The proposed project is bounded by Compton Boulevard to the north, Kemp Avenue to the east, 151st Street to the south and Dwight Avenue to the west. The proposed project would consist of 24-single family dwelling units. The site is currently vacant. Site access is planned at two driveways on 151st Street.

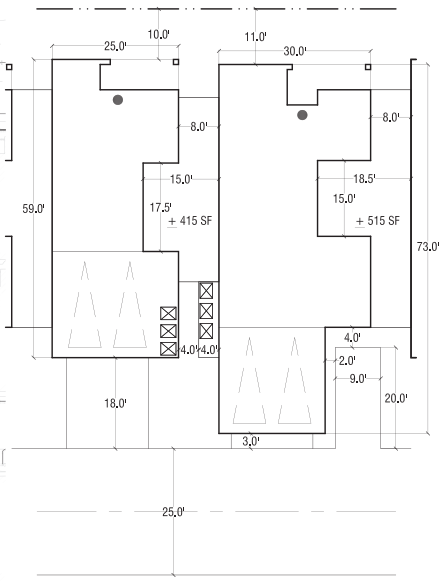
The proposed project is anticipated to be built and generating trips in 2021.

Figure 1 shows the project site location. ***Exhibit 1*** shows the proposed project site plan.

Figure 1– *Project Location*







Typical Lot Setbacks

Project Summary

Total Site Area: ± 2.45 Acres

Total Units: 24 Homes
- (9) Plan 1: ± 1,900 SF
- (15) Plan 2: ± 2,500 SF

Density: 9.8 Homes per Acre

Parking:

Required: 54 Spaces (2.25 spaces per home)
- (24) Homes x 2.0 Spaces = 48 Spaces
- (24) Guest x 0.25 Spaces = 6 Spaces

Provided: 99 Spaces (4.12 spaces per home)
- Garage: 48 Spaces (18' x 20' clear)
- Driveway: 18 Spaces (2 space/drive)
- Head In: 29 Spaces (9' x 20')
- Parallel: 4 Spaces (9' x 22')

Zoning Summary

Existing General Plan: Medium Density Residential
Proposed General Plan: Medium Density Residential

Existing Zoning: CL - Limited Commercial & P - Parking
Proposed Zoning: R-M-D - Medium Density Residential - Planned Development

Max. Density: 17.14 Homes per Acre (2,500 sf/home)

Proposed Setbacks:
Compton Blvd: 7'-8" to building
Dwight Ave: 9'-6" to building
Kemp Ave: 7'-8" to building
151st St: 8'-10"' to building

Building Separation: 8'

Max. Building Height: 35'

Notes:

1. Site plan is for conceptual purposes only.
2. Site plan must be reviewed by planning, building, and fire departments for code compliance.
3. Base information per civil engineer.
4. Civil engineer to verify all setbacks and grading information
5. Building Footprints might change due to the final design elevation style.
6. Open space area is subject to change due to the balcony design of the elevation.
7. Building setbacks are measured from property lines to building foundation lines.

2.2 STUDY AREA

The following intersection in the vicinity of the project site have been included in the intersection level of service (LOS) analysis based on submission of a scoping letter and receipt of comments back from City staff. The scoping letter and City response is provided in ***Appendix A.***

- Dwight Avenue (NS) at Compton Boulevard (EW)

This traffic analysis follows the *Los Angeles County Public Works Traffic Impact Analysis Report Guidelines (January 1, 1997)*.

Exhibit 2 shows the location of the study intersections, which are analyzed for the following study scenarios:

- Existing Conditions;
- Project Opening Year (2021) Without Project Conditions; and
- Project Opening Year (2021) With Project Conditions.

Traffic operations are evaluated for the following time periods:

- Weekday AM Peak Hour occurring within 7:00 AM to 9:00 AM; and
- Weekday PM Peak Hour occurring within 4:00 PM to 6:00 PM.

2.3 ANALYSIS METHODOLOGY

Level of Service (LOS) is commonly used to describe the quality of flow on roadways and at intersections using a range of LOS from LOS A (free flow with little congestion) to LOS F (severely congested conditions). The City of Compton and Los Angeles County utilize the Intersection Capacity Utilization (ICU) methodology for signalized intersection analysis. The ICU methodology expresses the LOS of an intersection in terms of the remaining capacity at an intersection (or lack thereof). The ICU methodology compares the volume-to-capacity (V/C) ratios of conflicting turn movements at an intersection, sums the critical conflicting V/C ratios for each intersection approach, and determines the intersection's overall capacity utilization. The resulting V/C ratio is converted to an LOS as shown in ***Table 1***.

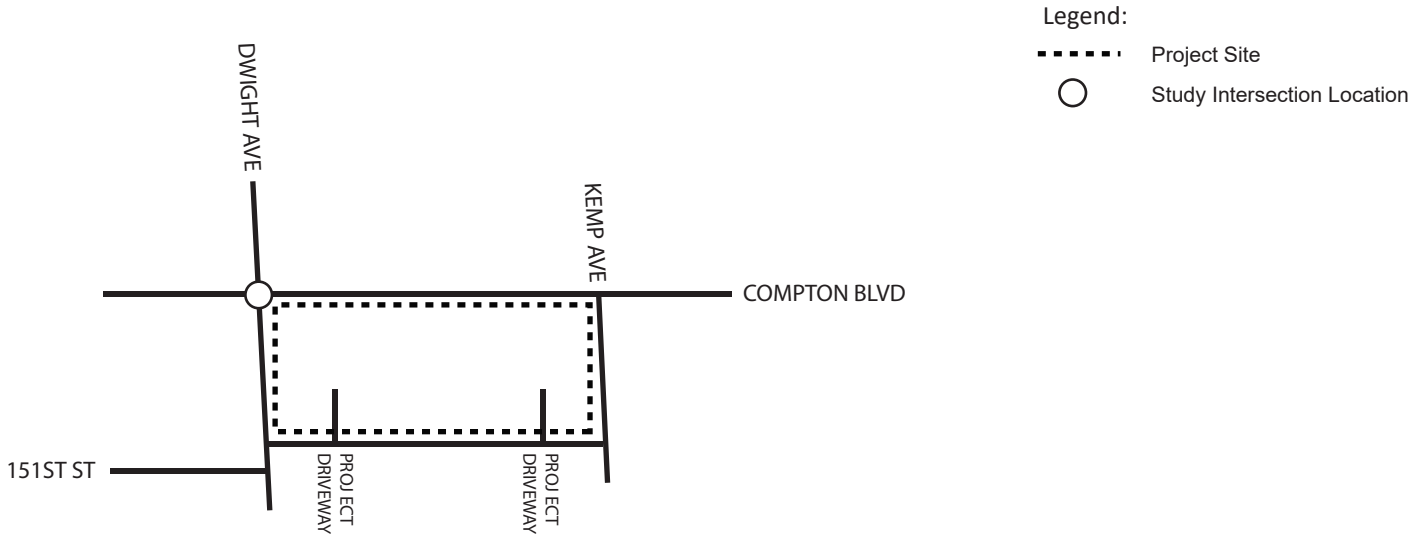

Exhibit 2: Study Intersection Locations

CVR-19-001 Compton & Kemp Traffic Impact Analysis

Not to Scale

Table 1
LOS & V/C Ranges

Level of Service	Volume to Capacity Ratio	Description
A	0.000 – 0.600	Free Flow: No approach phase is fully utilized and no vehicle waits longer than one cycle
B	0.601 – 0.700	Stable Flow: An occasional approach phase is fully utilized. Some drivers feel restricted in platoons.
C	0.701 – 0.800	Stable Flow: Major approach phases fully utilized. Most drivers feel restricted in platoons.
D	0.801 – 0.900	Tolerable Delays: Drivers may have to wait more than one cycle on occasion. Queues develop but dissipate rapidly and without excessive delays.
E	0.901 – 1.000	Unstable Operations: Volumes at or near capacity. Vehicles may wait several signal cycles. Long queues form upstream from intersection.
F	>1.000	Excessive Delays: Traffic flow breaks down, representing jammed conditions. Intersection operates below capacity. Queues may block upstream intersections.

This study utilizes a 1,900 vehicle per lane per hour saturation flow rate and a clearance interval of ten percent for the ICU analysis.

2.4 PERFORMANCE CRITERIA

The City of Compton has established level of service "D" or better as acceptable LOS for all intersections along the designated street and highway system in the General Plan Circulation Element.

2.5 THRESHOLDS OF SIGNIFICANCE

According to California Environmental Quality Act (CEQA) guidelines, a project is considered to cause a significant impact to a transportation system if it:

- Conflict with program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?
- Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?[1]
- Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?
- Result in inadequate emergency access?

For the purposes of analyzing CEQA impacts, the City of Compton utilizes the following Los Angeles County thresholds of significant to identify significant transportation impacts:

[1]CEQA Guidelines section 15064.3(c) provides that a lead agency "may elect to be governed by the provisions" of the section immediately; otherwise, the section's provisions apply July 1, 2020. Here, the City has not elected to be governed by Section 15064.3. Accordingly, an analysis of vehicles miles traveled (VMT) is not necessary to determine whether a proposed project will have a significant transportation impact.

- If an intersection is projected to operate at LOS C with the proposed project, and the proposed project increases the ICU by 0.040 or more, a significant impact is deemed to occur.
- If an intersection is projected to operate at LOS D with the proposed project, and the proposed project increases the ICU by 0.020 or more, a significant impact is deemed to occur.
- If an intersection is projected to operate at LOS E/F with the proposed project, and the proposed project increases the ICU by 0.010 or more, a significant impact is deemed to occur.

3.0 Existing Conditions

3.1 EXISTING CIRCULATION NETWORK/STUDY AREA CONDITIONS

The characteristics of the roadway system in the vicinity of the proposed project site are described in ***Table 2.***

Table 2
Roadway Characteristics Within Study Area

Roadway	Classification[1]	Direction	Existing Travel Lanes	Median Type	Speed Limit (mph)	On-Street Parking
Compton Boulevard	Secondary Highway	East-West	4	None	35	Yes
Dwight Avenue	Local Street	North-South	2	None	25	Yes
Kemp Avenue	Local Street	North-South	2	None	25	Yes
151st Street	Local Street	East-West	2	None	25	Yes

1: Sources: City of Compton General Plan Circulation Element

Exhibit 3 shows existing conditions study area intersection and roadway geometry.

3.2 CITY OF COMPTON GENERAL PLAN CIRCULATION ELEMENT

The proposed project site is located within the City of Compton. ***Appendix B*** contains the current Compton General Plan Circulation Element future transportation network and roadway classifications.

3.3 EXISTING BICYCLE AND PEDESTRIAN FACILITIES

There are no bicycle lanes on study area roadways. Sidewalks and curb ramps at intersections are present in the study area, except on the east side of Dwight Avenue along the project's frontage and on the north side of 151st Street along the project's frontage, where they are absent.

The proposed project is consistent with the City of Compton Bicycle Master Plan (May, 2015).

Appendix B contains Compton General Plan Circulation Element Bikeway Plan.

3.4 EXISTING PUBLIC TRANSIT SERVICES

The City of Compton is served by Los Angeles Metro which provides bus service throughout Los Angeles County. ***Figure 2*** shows the Metro routes in the vicinity of the City of Compton. Additionally, the Compton Renaissance Transit System provides limited local service within the City of Compton.

Source: Google Earth, 2019

Exhibit 3: Existing Lane Geometry & Intersection Control

CVR-19-001 Compton & Kemp Traffic Impact Analysis

Not to Scale

Figure 2– *LA Metro Transit Routes*

There is one bus route within one-quarter mile of the proposed project site.

Metro Route 51/351 travels between the Wilshire/Vermont Purple Lane Station to the Compton Transit Center. In the vicinity of the proposed project, Route 51/351 runs along Compton Boulevard with a stop at the Compton Boulevard/Dwight Avenue intersection adjacent to the project site. Route 51/351 runs from 5:00 AM to 10:00 PM on weekdays with headways of 20-35 minutes and on weekends with 30-45 minute headways.

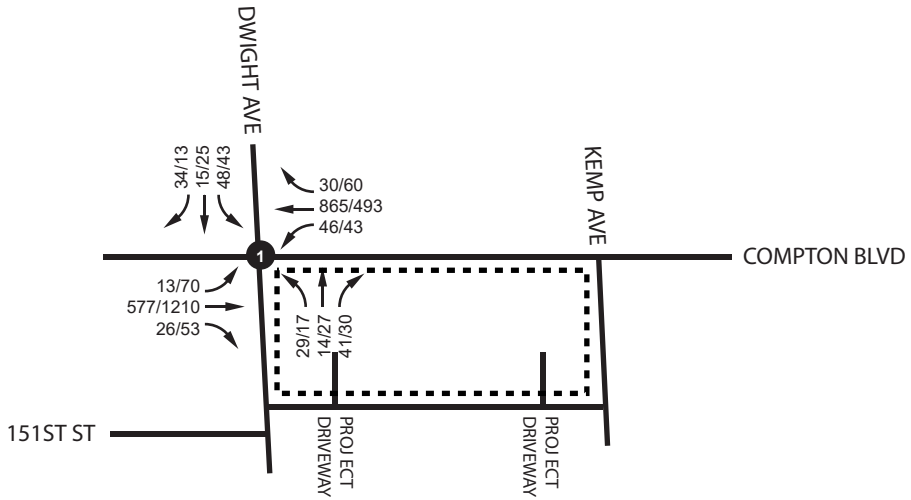
3.5 EXISTING TRAFFIC VOLUMES

To determine the existing operation of the study intersection, AM and PM peak period traffic counts at the study intersections were collected on Thursday June 6th, 2019. The traffic volumes used in this analysis are from the highest hour within the peak period counted. Detailed traffic count data is provided in ***Appendix C***.

Exhibit 4 shows existing AM and PM peak hour volumes at the study intersection.

3.6 EXISTING CONDITIONS INTERSECTION LEVEL OF SERVICE ANALYSIS

Existing conditions AM and PM peak hour intersection analysis is shown in ***Table 3***. Calculations are based on the existing geometrics at the study intersection as shown in ***Exhibit 3.*** ICU analysis sheets are provided in ***Appendix D***.



Legend:

Table 3
Intersection Analysis – Existing Conditions

Intersection	Control Type	Peak Hour	Existing Conditions
			V/C – LOS
Dwight Avenue/Compton Boulevard	Signal	AM	0.490 – A
		PM	0.626 – B

Note: V/C = volume-to-capacity ratio. Delay shown in seconds. Delay/LOS at project driveway shown for worst operating minor street movement.

As shown in ***Table 3***, the study intersection is currently operating at an acceptable LOS (LOS B or better) during the AM and PM peak hours.

4.0 Proposed Project

4.1 Project Description

The proposed project is bound by Compton Boulevard to the north, Kemp Avenue to the east, 151st Street to the south and Dwight Avenue to the west. The proposed project would consist of 24-single family dwelling units. The site is currently vacant. Site access is planned at two driveways on 151st Street.

The proposed project is anticipated to be built and generating trips in 2021.

Exhibit 1 previously showed the proposed site plans for the proposed project.

4.2 Project Trip Generation

Trip generation represents the amount of traffic, both inbound and outbound, produced by a development. Determining trip generation for a proposed project is based on projecting the amount of traffic that the specific land uses being proposed will produce.

Industry standard *Institute of Transportation Engineers (ITE) Trip Generation Manual (10th Edition, 2017)* trip generation rates were used to determine trip generation of the proposed project.

Table 4 shows the ITE 10th Edition trip generation rates used to calculate forecast trip generation of the proposed project.

Table 4
Trip Generation Rates for Proposed Project Land Use

Land Use (ITE Code)	Unit	AM Peak Hour			PM Peak Hour			Daily Trips
		In	Out	Total	In	Out	Total	
Single Family Residential (210)	DU	0.185	0.555	0.74	0.624	0.366	0.99	9.44

Note: DU = Dwelling Unit
Source: ITE Trip Generation, 10th Edition (2017).

Table 5 shows the projected increase in trip generation resulting from the proposed project.

Table 5
Trip Generation of Proposed Project

Land Use	Quantity	AM Peak Hour			PM Peak Hour			Daily Trips
		In	Out	Total	In	Out	Total	
24 Single - Family Dwelling Units	24 DU	5	13	18	15	9	24	227

Note: DU = Dwelling Unit

As shown in ***Table 5,*** the proposed project is forecast to generate approximately 18 AM peak hour trips, 24 PM peak hour trips and 227 daily trips.

4.3 Project Trip Distribution

Projecting trip distribution involves the process of identifying probable destinations and traffic routes that will be utilized by the proposed project's traffic. The potential interaction between the proposed land use and surrounding regional access routes are considered to identify the probable routes onto which project traffic would distribute. The projected trip distribution for the proposed project is based on anticipated travel patterns to and from the project site.

Exhibit 5 shows the projected trip distribution of proposed project trips.

4.4 Modal Split

The traffic reducing potential of public transit, walking and bicycling have not been considered in this analysis since transit facilities in the study area are limited.

4.5 Project Trip Assignment

Exhibit 6 shows the corresponding projected AM/PM peak hour trip assignment of project trips.

4.6 Traffic Management Plan

Stop signs will be installed at the project driveways for vehicles exiting the project site onto 151st street. Fire access will not be needed, in case of fires the fire department will fight the fires from outside the development. No parking signs will be posted throughout the site as needed or required by City standards.

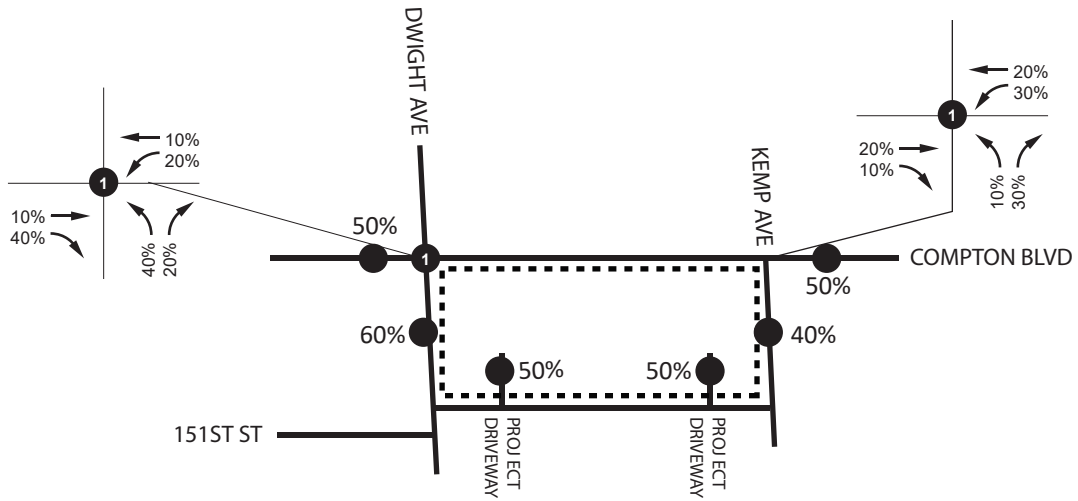

Exhibit 5: Projected Trip Distribution of Proposed Project Trips

CVR-19-001 Compton & Kemp Traffic Impact Analysis

5.0 Project Opening Year Without Project Conditions

5.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for the *project opening year without project* scenario are consistent with those previously shown in ***Exhibit 3***.

5.2 PROJECT OPENING YEAR WITHOUT PROJECT TRAFFIC VOLUMES

Project Opening Year Without Project traffic volumes consist of existing volumes plus application of an annual ambient growth rate to the project opening year, which in this case is 2021. The ambient growth rate used in this analysis is based on feedback provided on the scoping letter, which recommended a growth rate of 2% per year, applied for two years, to existing volumes to account for ambient traffic growth and any small cumulative development that occurs.

Project Opening Year Without Project Volumes = (Existing (2019) Counts * 1.02^2)

Exhibit 7 shows *project opening year without project* AM and PM peak hour volumes at the study intersections.

5.3 PROJECT OPENING YEAR WITHOUT PROJECT LEVEL OF SERVICE ANALYSIS

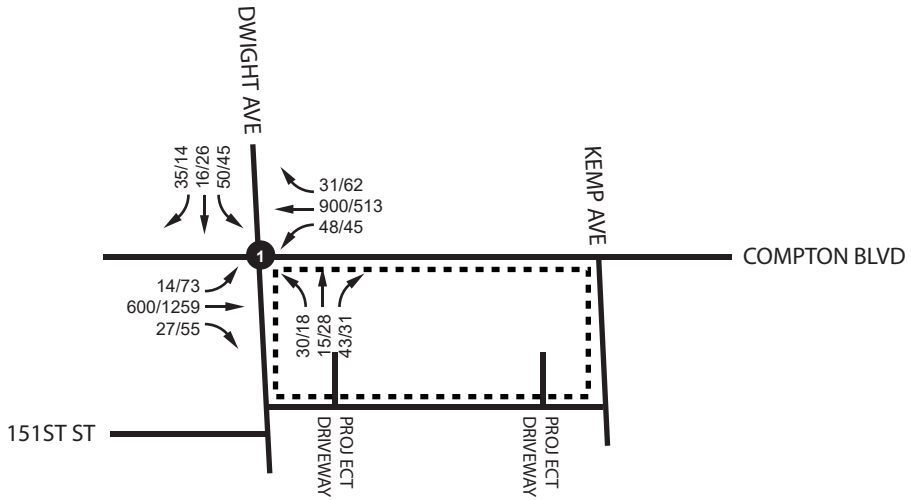
Project opening year without project conditions AM and PM peak hour intersection analysis is shown in ***Table 6.*** Calculations are based on the existing geometrics at the study intersection as shown in ***Exhibit 3.*** ICU analysis sheets are provided in ***Appendix D***.

Table 6
Intersection Analysis – Project Opening Year Without Project Conditions

Intersection	Control Type	Peak Hour	Existing Conditions	Project Opening Year Without Project
			V/C – LOS	V/C – LOS
Dwight Avenue/Compton Boulevard	Signal	AM	0.490 – A	0.501 – A
		PM	0.626 – B	0.648 – B

Note: V/C = volume-to-capacity ratio. Delay shown in seconds. Delay/LOS at project driveway shown for worst operating minor street movement.

As shown in ***Table 6***, the study intersection is projected to continue to operate at an acceptable LOS (LOS B or better) during the AM and PM peak hours for *project opening year without project conditions.*



Legend:

XX/XX AM/PM Peak Hour Volumes

Project Site

Exhibit 7: Project Opening Year
Without Project AM/PM Peak Hour Traffic Volumes

CVR-19-001 Compton & Kemp Traffic Impact Analysis

Not to Scale

6.0 Project Opening Year With Project Conditions

Project opening year with project conditions analysis is intended to identify the project-related impacts on the existing circulation system.

6.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for the *project opening year with project* scenario are consistent with those previously shown in **Exhibit 3**.

6.2 PROJECT OPENING YEAR WITH PROJECT TRAFFIC VOLUMES

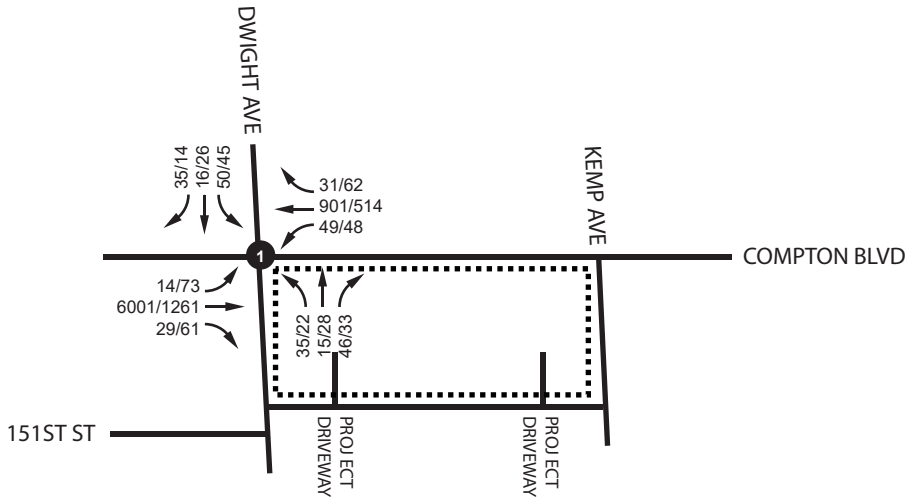
Project Opening Year With Project traffic volumes consist of existing volumes plus application of an annual ambient growth rate to the project opening year, which in this case is 2021, plus project trips. The ambient growth rate used in this analysis is based on feedback provided on the scoping letter, which recommended a growth rate of 2% per year, applied for two years, to existing volumes to account for ambient traffic growth and any small cumulative development that occurs.

Project Opening Year With Project Volumes = (Existing (2019) Counts * 1.02^2) + Project Traffic

Exhibit 8 shows *project opening year with project* AM and PM peak hour volumes at the study intersection.

6.3 PROJECT OPENING YEAR WITH PROJECT INTERSECTION LEVEL OF SERVICE ANALYSIS

Project opening year with project conditions AM and PM peak hour intersection analysis is shown in ***Table 7***. ICU analysis sheets are provided in ***Appendix D.***



Legend:

XX/XX AM/PM Peak Hour Volumes

Project Site

Exhibit 8: Project Opening Year
With Project AM/PM Peak Hour Traffic Volumes

CVR-19-001 Compton & Kemp Traffic Impact Analysis

Not to Scale

Table 7
Intersection Analysis – Project Opening Year With Project

Intersection	Control Type	Peak Hour	Existing Conditions	Project Opening Year Without Project	Project Opening Year With Project		
			V/C – LOS	V/C – LOS	V/C – LOS	Change in V/C	Significant Impact?
Dwight Avenue/Compton Boulevard	Signal	AM PM	0.490 – A 0.626 – B	0.501 – A 0.648 – B	0.505 – A 0.656 – B	0.004 0.008	No

Note: V/C = volume-to-capacity ratio. Delay shown in seconds. Delay/LOS at project driveway shown for worst operating minor street movement.

As shown in ***Table 7***, the study intersection is projected to continue to operate at an acceptable LOS (LOS B or better) for *project opening year with project* conditions.

Based on the thresholds of significance previously discussed in section 2.4, the addition of project generated trips does not result in any significant impacts at the study intersection.

7.0 Site Access and Sight Distance

This section summarizes proposed site access and on-site circulation recommendations.

7.1 ON-SITE ROADWAY IMPROVEMENTS

The recommended site-adjacent roadway improvements are described below.

Wherever necessary, roadways adjacent to the proposed project site and site access points should be constructed in compliance with recommended roadway classifications and respective cross-sections in the City of Compton General Plan Circulation Element or as directed by the City Engineer.

7.2 SIGHT DISTANCE ANALYSIS

A sight distance analysis for the proposed project driveway has been prepared based on the "stopping sight distance" requirements determined by Topic 201 and Table 201.1 of the *Caltrans Highway Design Manual* (HDM), latest edition. ***Table 8*** shows the minimum stopping sight distances based on the design speed, as displayed in Table 201.1 of the HDM.

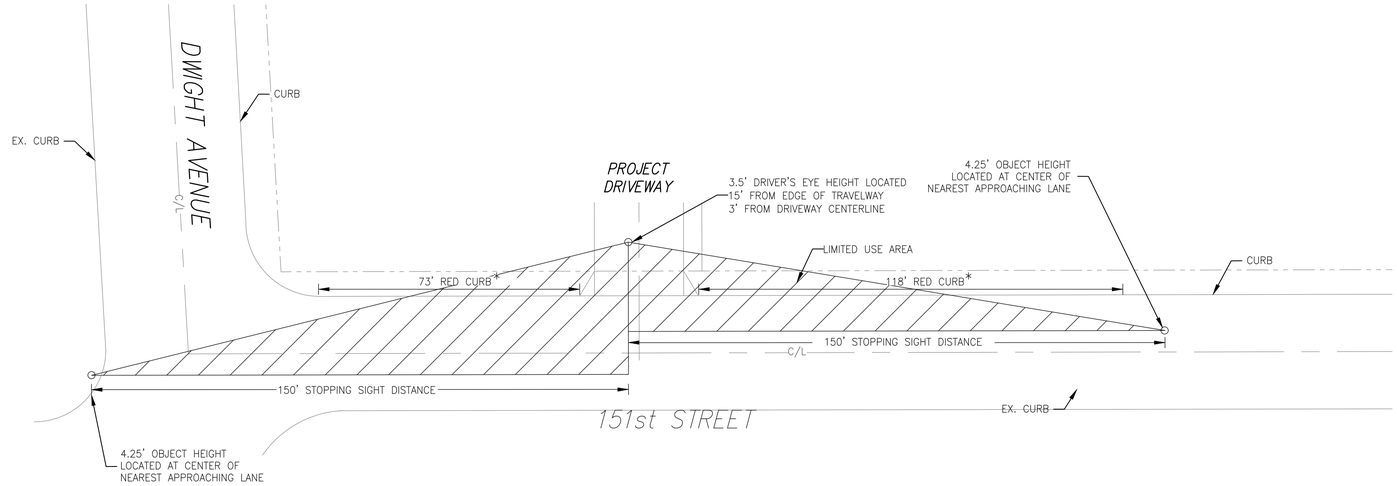
Table 8
Stopping Sight Distance

Design Speed (mph)	Stopping Sight Distance (ft)
25	**150**
30	200
35	250
40	300
45	360
50	430

Source: Table 201.1, Highway Design Manual (July 2, 2018)
Note: mph = miles per hour; ft = feet

In this analysis, the movements being analyzed at the Project Driveway intersections are movements from the exiting vehicles onto 151st Street. Since there is no posted speed limit on 151st Street between Dwight Avenue and Kemp Avenue, the 85th percentile speed is assumed to be 25 miles per hour.

Exhibit 9 displays the sight distance conditions at the project driveway in relation to the existing sidewalk, striping, and parking on 151st Street. The exhibit shows the required 15-foot setback from the edge of travel way and the 15-feet of sight distance required based on the assumed 85th percentile speed of 25 miles per hour.



151st STREET IS A LOCAL ROAD WITH A PRIMA FACIA SPEED LIMIT OF 25 MPH. TABLE 201.1 OF THE HDM, RECOMMENDS 150-FEET OF STOPPING SIGHT DISTANCE.

* NOTE: SECTION 405.1 OF THE HDM RECOMMENDS PARKING RESTRICTIONS ON URBAN DRIVEWAYS BE SET PER CA MUTCD SECTION 3B.19. SECTION 3B.19 RECOMMENDS A CLEARANCE OF **6-FEET** MEASURED FROM CURB RETURN SHOULD BE PROVIDED AT BOTH SIDES OF A DRIVEWAY.

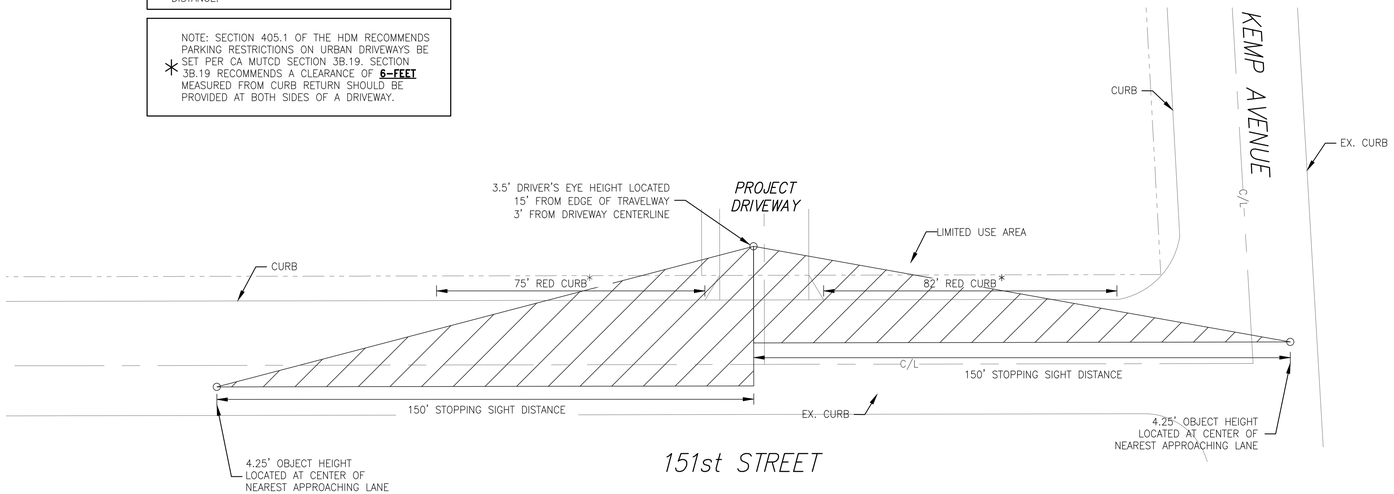


EXHIBIT 9: SIGHT DISTANCE ANALYSIS
CVR-19-001 COMPTON & KEMP TRAFFIC IMPACT ANALYSIS
Date: 09/30/21

SCALE: 1" = 20'
10 0 10 20 30

As shown in ***Exhibit 9***, the stopping sight distance requirements would be impaired by existing parking 151st Street west and east of the driveways. To meet the stopping sight distance standard, approximately 348 feet of red-curb would need to be painted on the north side of 151st Street.

TJW notes that Section 405.1 of the Highway Design Manual recommends that parking restrictions on urban driveways be set per California Manual on Uniform Traffic Control Devices (CA MUTCD) Section 3B.19. Section 3B.19 recommends a clearance of 6-feet measured from the curb return should be provided at both sides of a driveway. It is TJW's recommendation that the CA MUTCD guidance be followed and a clearance of 6-feet be provided at both sides of the driveway.

8.0 Parking

The proposed project consists of 24 single family dwelling units. *Table 30.-21.A Parking Space Requirements* in the City of Compton Zoning Code contains minimum parking requirements for various land uses in the City.

Single family dwelling units are required to provide two enclosed spaces per dwelling unit. The proposed project would be required to provide 48 enclosed parking spaces.

The proposed project is providing two-car garages for every dwelling unit, with driveways that provide an additional two uncovered parking spaces per unit, as well as six on-street guest parking spaces, meeting code requirements whether analyzed as single family dwelling units.

Providing access to the proposed project will result in the loss of up to 6-8 on-street parking spaces on the north side of 151st Street between Dwight Avenue and Kemp Avenue due to the construction of two driveways with 6-feet of red curb on both sides of the driveways.

TJW collected on-street parking counts on the streets surrounding the project site in the afternoon and evening on Wednesday June 19th, 2019 from 4:00 PM to 12:00 AM to assess the existing parking inventory and occupancy. Evening hours were chosen since the overnight period is the peak period of parking demand for the residential uses adjacent to the site. Since the on-street parking supply is not striped, the inventory of each block face was projected based on observations in the field. And measurements of curb space.

The parking areas assessed were the south side of Compton Boulevard between Dwight Avenue and Kemp Avenue, both sides of Dwight Avenue between Compton Boulevard and 151St Street, both sides of 151st Street between Dwight Avenue and Kemp Avenue, and both sides Kemp Avenue between Compton Boulevard and 151st Street.

Table 9 summarizes the results of the parking inventory and occupancy counts. Detailed data, which was collected in 30 minute increments, is available in ***Appendix E***.

As shown in Table 9, there are approximately 94 on-street parking spaces on the streets surrounding the project site. The peak period of observed parking demand was at 11:00 PM – 12:00 AM, when 61 vehicles were parked in the survey area, for an overall occupancy of 65%. While certain streets, such as 151st Street and Kemp Avenue were over 80% occupied, Dwight Avenue and Compton Boulevard were under 50% full.

Based on the parking data collection, there is adequate on-street parking availability nearby to accommodate any displacement from the loss of 6-8 on-street parking spaces on 151st Street.

Table 9

9.0 Signal Warrant Analysis

A signal warrant analysis was conducted at the intersection of Compton Boulevard and Kemp Avenue. Compton Boulevard is classified as a four-lane secondary highway and has a posted speed limit of 35 miles per hour. Kemp Avenue is classified as a two-lane local street and has no posted speed limit. The intersection currently operates as a two-way stop intersection with the off-set Kemp Avenue approaches being stop controlled. Traffic counts were conducted at the intersection on Wednesday August 21, 2019.

Traffic signal warrants for project opening year with project conditions were prepared. Because the speed limit on Compton Boulevard is 35 miles per hour, Figure 4C-3 of the *California Manual on Traffic Control Devices* was used to evaluate the conditions at the intersection. ***Table 10*** summarizes the results of the signal warrant analysis. Detailed warrant analysis sheets are included in Appendix F.

Table 10
Signal Warrant Analysis

Intersection	Signal Warrants Met?	
	AM Peak Hour	PM Peak Hour
Compton Boulevard/Kemp Avenue	No	No

As shown in ***Table 10***, peak hour signal warrants are not met for project opening year with project conditions. Signalization of the Compton Boulevard/Kemp Avenue intersection is not recommended.

SCOPING AGREEMENT/SCOPING EMAILS

TJW ENGINEERING, INC.
TRAFFIC ENGINEERING &
TRANSPORTATION PLANNING
CONSULTANTS

May 7, 2019

Mr. Hien Nguyen, PE
Assistant City Engineer
City of Compton
205 S Willowbrook Ave
Compton CA 90220

Report: Scoping Agreement for the Compton & Kemp Residential Project Traffic Impact Analysis

Dear Mr. Nguyen:

TJW ENGINEERING, INC. (TJW) is pleased to submit this scoping agreement for the proposed Compton & Kemp residential project in the City of Compton. The project site is bound by Compton Boulevard to the north, Kemp Avenue to the east, W 151st Street to the south and Dwight Avenue to the west. The proposed project consists of 24 single-family dwelling units.

The Project's site plan is attached to this scoping letter. The project is anticipated to be built and generating trips in 2021. Site access is planned at two driveways on W 151st Street.

The traffic impact analysis will follow applicable City of Compton and Los Angeles County guidelines for traffic impact analysis.

Trip Generation

Trip generation for the proposed project will be developed using rates from the Institute of Transportation Engineers (ITE) Trip Generation Manual (10th Edition) for Land Use 210 – Single-Family Detached Housing. As shown in Table 1, the project is anticipated to generate 227 daily trips, 18 AM peak hour trips, and 24 PM peak hour trips.

Table 1: Proposed Project Trip Generation

Proposed Land Use[1]	Qty/ Unit	Daily Trips (ADTs)		AM Peak Hour					PM Peak Hour				
		Rate	Volume	Rate	In:Out Split	Volume			Rate	In:Out Split	Volume		
						In	Out	Total			In	Out	Total
Single-Family Detached Housing (210)	24 DU	9.44	**227**	0.74	25:75	4	14	18	0.99	63:37	15	9	24

[1]: Rates from ITE Trip Generation (10th Edition, 2017)

Trip Distribution and Assignment

The project site is situated within a large rectangle formed by the 105, 110, 710 and 91 freeways. Project trips are generally projected to arrive/depart via Compton Boulevard and head to/from other major arterials to access freeways for work related trips, and to utilize local streets for other trips. The proposed project's trip distribution assumes that 50% of project trips will arrive/depart from/to the west on Compton Boulevard and 50% of project trips will arrive/depart from/to the east on Compton Boulevard.

Study Area

turning movement counts to be conducted on 5/29, 5/30, 6/4, 6/5, or 6/6/19 between 4p and 6p

Based on ~~the trip generation~~, the following two (2) intersections will be analyzed in the level of service analysis:

1. Compton Boulevard/Dwight Avenue; and
2. ~~Compton Boulevard/Kemp Avenue.~~

PM

County

Study Analysis Scenarios

Consistent with Los Angeles traffic study guidelines, the analysis of peak hour operations at study area intersection will occur for the following scenarios:

(1) Existing Traffic Conditions;
~~(2) Existing Plus Project Conditions;~~
(3) Project Opening Year Without Project Conditions; and
(4) Project Opening Year With Project Conditions.

With opening year being 2021, assume existing traffic volumes will increase by 4% in 2 years.

The Intersection Capacity Utilization (ICU) methodology will be used in the analysis per the Los Angeles County traffic impact analysis guidelines.

Level of Service Criteria

The City of Compton target for peak hour intersection operations is LOS D or better.

For the purposes of analyzing California Environmental Quality Act (CEQA) impacts, the City of Compton identifies significant impacts based on a comparison of the without and with project ICU at study intersections according to the following criteria:

- If an intersection is projected to operate at LOS C with the proposed project, and the proposed project increases the ICU by 0.040 or more, a significant impact is deemed to occur.
- If an intersection is projected to operate at LOS D with the proposed project, and the proposed project increases the ICU by 0.020 or more, a significant impact is deemed to occur.
- If an intersection is projected to operate at LOS E/F with the proposed project, and the proposed project increases the ICU by 0.010 or more, a significant impact is deemed to occur.

~~***Cumulative Projects***~~

TJW will obtain a list of cumulative projects from the City. TJW will utilize this list to determine which cumulative projects should be included in the cumulative conditions analysis. If the City has any information on the cumulative projects such as trip generation and trip distribution patterns for each project, or prior completed traffic studies, TJW requests that this information be forwarded to us electronically.

Please feel free to call us at (949) 878-3509 if you have any questions regarding this scoping letter.

Signal Warrant Analysis
TJW will conduct turning movement counts at West Compton Blvd. and Kemp Ave. from 4p to 6p on 5/29, 5/30, 6/4, 6/5 or 6/6/19. Based on these counts, TJW will evaluate Signal Warrants 2 (Four Hour) and 3 (Peak Hour) for the intersection under Opening Year (2021) with Project Conditions.

Sincerely,

TJW ENGINEERING, INC.

Typical Lot Setbacks

Project Summary

Total Site Area: ± 2.45 Acres

Total Units: 24 Homes
- (8) Plan 1: ± 1,700 SF, 3 bedroom
- (16) Plan 2: ± 1,900 SF, 3 bedroom, opt. bed 4

Density: 9.8 Homes per Acre

Parking:

Required: 54 Spaces (2.25 spaces per home)
- (24) Homes x 2.0 Spaces = 48 Spaces
- (24) Guest x 0.25 Spaces = 6 Spaces

Provided: 102 Spaces (4.25 spaces per home)
- Garage: 48 Spaces (18' x 20' clear)
- Driveway: 48 Spaces (2 space/drive)
- Parallel: 6 Spaces (9' x 22')

Open Space:

Provided: 14,050 S.F. Total (585 S.F. per home)
- Common: 5,390 S.F. (10' Min. Dimension)
- Private: 8,660 S.F. (10' Min. Dimension)

Zoning Summary

Existing General Plan: Medium Density Residential
Proposed General Plan: Medium Density Residential

Existing Zoning: CL - Limited Commercial & P - Parking
Proposed Zoning: R-M-D - Medium Density Residential - Planned Development

Max. Density: 17.14 Homes per Acre (2,500 sf/home)

Proposed Setbacks:
- Compton Blvd: 15' to building; 9' to covered porch
- Dwight Ave: 15' to building; 12' to covered porch
- Kemp Ave: 15' to building; 12' to covered porch
- 151st St: 14' to single story element (building 1 & 17); 15' to front of building; 9' to covered porch

Building Separation: 10'

Max. Building Height: 35'

Notes:
1. Site plan is for conceptual purposes only.
2. Site plan must be reviewed by planning, building, and fire departments for code compliance.
3. Base information per civil engineer.
4. Civil engineer to verify all setbacks and grading information.
5. Building Footprints might change due to the final design elevation style.
6. Open space area is subject to change due to the balcony design of the elevation.
7. Building setbacks are measured from property lines to building foundation lines.

Subject: 930 W. COMPTON BLVD PROJECT---1ST COMMENTS ON SCOPE OF TRAFFIC STUDY

Hello Gentlemen,

Per your request, please find Public Works Dept.'s Comments on "TIA Scope" as follows:

1. The TIA shall follow the LACDPW's guidelines

2. For safety of the public: The TIA shall include, but not limited to, the following:

   - A "Line Sight Study" [LSS] for traffic exiting the site onto 151st Street.
   - Traffic Management Plan for the site development including, but not limited to, fire lanes, no parking signs, stop signs for traffic exiting the site onto 151st Street, etc.

3. For info on list of related projects [within 1.5-mile radius of the site]: Please contact Mr. Troy Gunther of Planning Dept.

4. Impact of on-street parking surrounding the site and mitigation measures

5. PW Dept. will accept the ICU methodology, and the following softwares:

   - HCS version 2000 or later version,
   - Synchro V7 or later version
   - Traffix (Dowling) v.7.6 or later version
   - VISTRO
   - or other equivalent softwares

Please find the attached file prepared by Public Works Plan Check Consultant Willdan Engineering as a part of the composite PW Dept.'s comments on your proposed TIA Scope.

Thanks

APPENDIX B

COMPTON GENERAL PLAN ROADWAY CLASSIFICATIONS AND CROSS SECTIONS

CIRCULATION PLAN

The "Circulation Issues" discussion in this element identifies the long-term transportation and circulation concerns in Compton. This section describes the programs and strategies the City will pursue to address these issues and to move towards a balanced transportation system that meets the future mobility needs of Compton residents, as well as the business sector's demand to move goods most efficiently and effectively.

MASTER PLAN OF STREETS AND HIGHWAYS

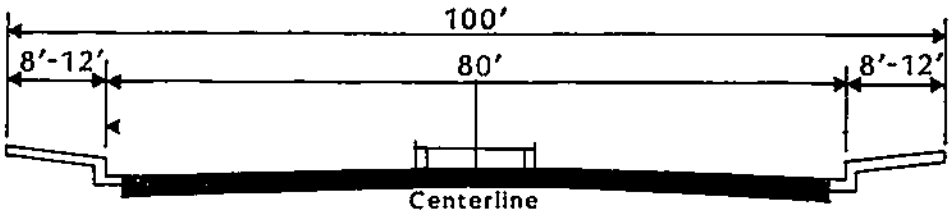
Streets and highways in Compton are described and classified according to their primary function. This hierarchical system of roadways consists of the following four basic classifications:

- Major Highway;
- Secondary Highway;
- Collector; and
- Local Street.

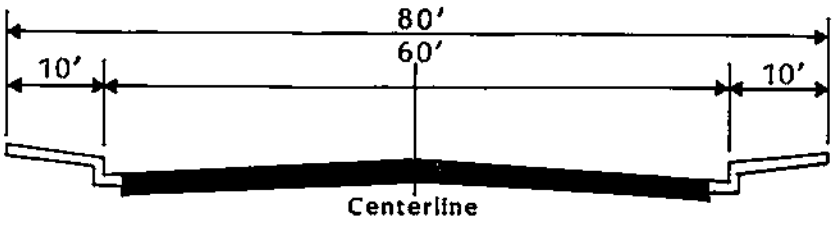
Figure C-1 illustrates the roadway cross-section standards (geometrics) for these five classifications. Roadway functions and standards may be described as follows.

Major Highway

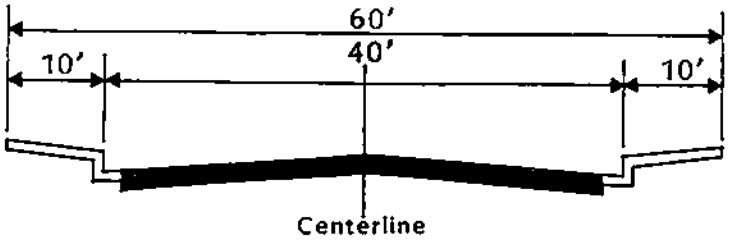
A Major Highway is the highest capacity street within the City's street system. Major Highways are designed to carry high volumes of traffic, primarily for through trips. They serve as the principal connectors from lower classification streets to the freeway system and other regional routes. The standard calls for 100 feet of right-of-way and four to six travel lanes within a minimum 80-foot wide, curb-to-curb paved street section. The right-of-way and paved road width can be increased at and near intersections to allow for median strips and extra turn lanes.



Major Highway (a)

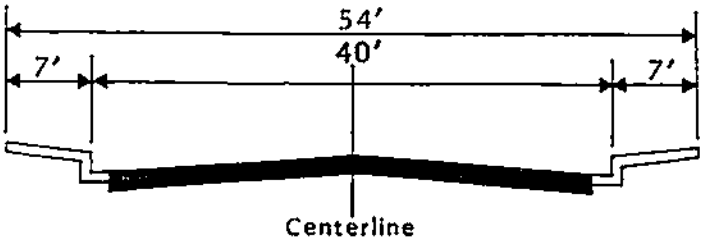


Secondary Highway



4' minimum sidewalk on both sides

Standard Collector



4' minimum sidewalk on both sides

Residential Collector

12/3/91

(a) Major Highway right-of-way may be increased to accomodate center median or extra turn lanes at intersections.

(b) All roadbed widths shown are minimums.

Figure C - 1
Standard Street Cross Sections

Major Highways in the Compton planning area include El Segundo Boulevard (west of Santa Fe Avenue), Rosecrans Avenue, Alondra Boulevard, Artesia Boulevard (east of Alameda), Victoria/Apra Street, Avalon Boulevard, Central Avenue, Wilmington Avenue, Santa Fe Avenue, Long Beach Boulevard, and Atlantic Avenue.

Secondary Highway

Secondary Highways connect Major Highways to collector and local streets and are intended to carry relatively high traffic volumes for both through and local trips. A Secondary Highway consists of 80 feet of right-of-way and four travel lanes within a 60-foot, curb-to-curb paved section.

The Secondary Highways in Compton are 135th Street, Compton Boulevard, Greenleaf Boulevard, Walnut Street, Willowbrook Avenue, Tamarind Avenue, Mona Boulevard, Temple Avenue, Bullis Road, Compton Avenue, and Artesia Boulevard (west of Alameda).

Collectors

Two Collector classifications are included within the street system - the Standard Collector and the Residential Collector. Standard Collectors serve the City's major industrial and commercial areas and high density residential developments and are designed to carry moderate to relatively high volumes of traffic to the Secondary and Major Highways, while avoiding lower density residential neighborhoods. The Residential Collector accommodates moderate traffic volumes and is intended to carry residential traffic from the neighborhoods to schools, parks, and shopping areas.

Standard Collectors contain slightly more right-of-way than Residential Collectors, consisting of 40 feet of paving within a 60-foot right-of-way width. The Residential Collector has a 40-foot paved section and a minimum 54-foot right-of-way. Collector streets will be designated as part of a special study.

Local Streets

Local Streets are designed to carry low volumes of local (non-through) traffic. Locals connect to Collectors and Highways for through trips. Standards for Local Streets are variable, given the variety of residential subdivisions which have been developed since Compton incorporated as a City.

Study Street

Alameda Street is designated as a Study Street since street width and configuration will be determined as part of the Alameda Corridor design study.

Critical Intersections

Figure C-2 identifies several intersections as "critical intersections." These are locations where, over time, right-of-way beyond the standard rights-of-way illustrated in Figure C-1 may be needed to accommodate additional turn lanes. Traffic volumes may be more easily managed if a dedicated right-turn lane, dual left-turn lanes, or other non-standard configurations are provided.

Master Plan

Figure C-2 presents the Master Plan of Streets and Highways for Compton. This plan shows the ultimate circulation system needed to move people and goods within and through the City while maintaining roadway service levels of Level of Service D or better. The system incorporates regional infrastructure and public transit improvements and plans, and accommodates the City's specific transportation needs. Physical road improvements will be necessary to achieve this system, including road widenings, roadway reconfiguration, construction of the Alameda Corridor, and grade separations at railroad crossings.

Road Widenings: Several Major and Secondary Highways will require widening and restriping to provide consistent widths and to accommodate future traffic volumes. In particular, the following improvements will be made.

- Central Avenue between Rosecrans Avenue and Compton Boulevard will be widened and restriped to provide a six-lane divided highway.

- Wilmington Avenue between the Artesia Freeway and Victoria Street will be widened and restriped to provide a six-lane divided highway.

- Greenleaf Boulevard between Wilmington Avenue and Santa Fe Avenue will be widened to provide a four-lane divided roadway.

- Long Beach Boulevard, from the north City limit to Rosecrans Avenue, will be widened and restriped to provide a six-lane divided roadway.

To accomplish street widenings, the City will undertake a comprehensive approach. This requires that the City schedule the improvement in a Capital Improvement Plan (CIP) and acquire right-of-way through eminent domain or permanent on-street parking restrictions.

These identified widenings will be performed over the 20-year General Plan planning period (before the year 2010). The City will monitor roadway volumes over time to determine the timing and approach for the improvements.

Roadway Reconfiguration: Along many road sections, right-of-way width exists consistent with the Master Plan. However, efficient traffic movement is hindered by uncontrolled access from feeder streets and from development fronting on Highways and Collectors. To allow for better flow, the City may provide raised medians (divided roadways) along the following street segments:

- Wilmington Avenue between Compton Boulevard and the Artesia Freeway;

- Long Beach Boulevard between the north City limits and the Artesia Freeway (virtually its entire length through Compton); and

- Rosecrans Avenue between Santa Fe Avenue and Long Beach Boulevard.

If studies indicate these improvements can significantly improve traffic flow, improvements will be completed before the year 2005.

Alameda Corridor: As described previously in this element, the Alameda Corridor represents a major improvement to the regional transportation system (Figure C-2). The corridor, planned to connect the ports of Los Angeles and Long Beach to multi-modal goods distribution facilities near downtown Los Angeles, is described as "a critical link for the movement of local and international cargo."[1] This road and rail freight route is intended to reduce through truck traffic on parallel streets and freeways, especially heavily-traveled Interstate 710, and to consolidate freight rail traffic to a single corridor, thus reducing rail/surface street conflicts.

As a member of the Alameda Corridor Transportation Authority, Compton will participate in the selection of the corridor design. Primary options include: 1) a four-lane road with parallel, multi-track rail lines; 2) a six-lane, one-way road couplet with at-grade rail tracks between the one-way routes; and 3) the six-lane road couplet separated by a depressed rail way. Grade separations are contemplated at principal east-west streets. Compton will encourage grade separations at several locations in the City, as described below.

Grade Separations: Construction of new rail and surface street grade separations involves tremendous costs. However, traffic congestion can be greatly mitigated by removing hindrances to free east-west traffic flow. Thus, the City strongly supports efforts to consolidate freight rail traffic along a single corridor and to provide grade separations in the design of the Alameda Corridor. Priority streets in Compton for grade separation include Compton Boulevard, Alondra Boulevard, and Greenleaf Boulevard.

Compton will work to include these streets in the design of the Alameda Corridor. In the event the Alameda Corridor is not built or construction is significantly delayed, Compton will seek other funding sources and establish accelerated time schedules for construction of grade separations.

---

[1]Project Memorandum, "The Alameda Corridor Project," Alameda Corridor Transportation Authority.

The City will continue construction efforts to complete the Mealy Street rail line relocation, which involves completion of the Rosecrans Avenue overpass at Alameda Street and depression of West Alameda Street below the relocated Wilmington Branch rail line, among other improvements.

Traffic Signal Synchronization: The City will complete its program to computerize traffic signals Citywide so that traffic flow can be synchronized and better managed. Complete synchronization will be accomplished by 1995.

ROADWAY MAINTENANCE AND REHABILITATION

Potholed streets, crumbling curbs, and cracked sidewalks citywide contribute to traffic safety problems and a general unkempt appearance. By implementing stronger roadway rehabilitation and maintenance programs, the City will achieve two important goals -- reducing congestion and enhancing the visual character of Compton.

Additional funds for infrastructure improvements will be available from State gas tax revenues increased via legislation passed in 1990. The legislation ties a jurisdiction's eligibility for funds to that jurisdiction's compliance with adopted Congestion Management Plans. Compton will comply with the provisions of the Los Angeles County CMP, as discussed in this element, to ensure the City receives its share of the revenues. A Capital Improvement Plan (CIP) will be submitted to the LACTC as required.

The City will place priority on rehabilitating residential streets within target neighborhoods, as discussed in the Housing Element, toward the end of improving overall neighborhood quality. General Fund, Community Development Block Grant (CDBG), and tax increment resources will be used for this program. Tax increment and CMP funds will be the primary resources used to finance roadway improvements within the commercial and industrial districts.

As growth throughout Southern California adds vehicles to the region's overburdened freeway and arterial highway systems, people will rely more heavily upon public transportation, especially for commute trips. Compton's ready access to RTD and other bus lines and to the Blue Line passenger rail will continue to offer Compton residents and persons working in the City alternatives to the private automobile.

Bus Service

To encourage use of public transit, the City will pursue several programs. Foremost, City officials will work with the RTD to monitor bus transit demands and service levels, and to adjust schedules and routes to best serve residents and commuters into the City. Figure C-3 illustrates preferred bus routes. Bus stops will be clearly identified with signs and benches or bus shelters. The City will cooperate with the RTD in funding these necessities.

In reviewing new development proposals, the City will consider the need for bus turnouts for projects abutting Major and Secondary Highways and Collector streets. If such improvements are necessary, the City will rely largely upon developer financing of the improvements.

Passenger Rail

To maximize use of passenger rail, Compton's multi-modal transit center at the Blue Line station will be expanded to accommodate shuttle bus and vanpool service to and from major employment centers. The center may have designated parking and loading areas for shuttle vehicles. Figure C-3 shows potential destination for shuttle services.

The City will support RTD's and other bus service providers' use of the transit center by providing adequate park-and-ride lots. The City, together with RTD, will monitor uses of the lots and will expand lots as necessary to support increased

No service on Saturday, Sunday, New Year's Day, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day.

Horarios de sábado, domingo y días feriados

No hay servicio en sábados, domingo, New Year's Day, Memorial Day, Independence Day, Labor Day, Thanksgiving Day y Christmas Day.

Nextrip

Text "metro" and your intersection or stop number to 41411 (example: metro vignes&cesarechavez or metro 1563).
You can also visit m.metro.net or call 511 and say "Nextrip"

Nextrip

Envíe un mensaje de texto con "Metro" y la intersección de la calle o el número de su parada al 41411. Nextrip le enviará un mensaje de texto con la próxima llegada de cada autobús en esa parada. También puede visitar m.metro.net o llamar al 511 y decir "Nextrip"

Subject: Traffic & Parking Analysis: Compton & Kemp Residential Project, City of Compton

Dear Ms. Prijatel:

TJW ENGINEERING, INC. (TJW) is pleased to present you with this revised traffic impact analysis for the proposed **Compton & Kemp Residential** project in the City of Compton.

This traffic study has been prepared to meet the traffic study requirements for the City of Compton and address comments provided on the draft report by City staff on August 8, 2019. This report is being submitted to you for review and forwarding to the City of Compton.

Please contact us at (949) 878-3509 if you have any questions regarding this analysis.

Sincerely,

Thomas Wheat, PE, TE
President

1.0 EXECUTIVE SUMMARY

This traffic impact analysis (TIA) analyzes the projected traffic operations associated with the proposed **Compton and Kemp Residential** project in the City of Compton. The purpose of this TIA is to evaluate potential circulation system deficiencies that may result from development of the proposed project, and to recommend improvements to achieve acceptable operations, if applicable. This analysis has been prepared pursuant to applicable City of Compton/Los Angeles County traffic impact analysis guidelines.

The proposed project is bounded by Compton Boulevard to the north, Kemp Avenue to the east, 151st Street to the south and Dwight Avenue to the west. The proposed project would consist of 24-single family dwelling units. The site, located at 930 West Compton Boulevard, is currently vacant. Site access is planned at two driveways on 151st Street.

The proposed project is anticipated to be built and generating trips in 2021.

The following signalized intersection in the vicinity of the project site has been included in the intersection level of service (LOS) analysis based on submission of a scoping letter and receipt of comments back from City staff.

- Dwight Avenue [runs north-south (NS)] at Compton Boulevard [runs east-west (EW)].

This traffic analysis follows the *Los Angeles County Public Works Traffic Impact Analysis Report Guidelines (January 1, 1997)*.

1.1 SUMMARY OF ANALYSIS RESULTS

No significant impacts are projected in the study area as a result of the proposed project, based on the City of Compton's thresholds of significance. Therefore, the proposed project should not be responsible for implementing any off-site improvements, except for improvements related to the project driveways.

The study intersection is projected to operate at an acceptable LOS (LOS D or better) for all analysis scenarios.

The proposed project will result in the loss of 6-8 on-street parking spaces on the north side of 151st Street between Dwight Avenue and Kemp Avenue based on California Manual on Uniform Traffic Control Devices (CA MUTCD) guidelines for urban driveways. There would still remain adequate on-street parking capacity on the streets adjacent to the proposed project site. The proposed project satisfies minimum off-street parking requirements.

2.0 INTRODUCTION

This traffic impact analysis (TIA) analyzes the projected traffic operations associated with the proposed **Compton and Kemp Residential** project in the City of Compton. The purpose of this TIA is to evaluate potential circulation system deficiencies that may result from development of the proposed project, and to recommend improvements to achieve acceptable operations, if applicable. This analysis has been prepared pursuant to applicable City of Compton/Los Angeles County traffic impact analysis guidelines.

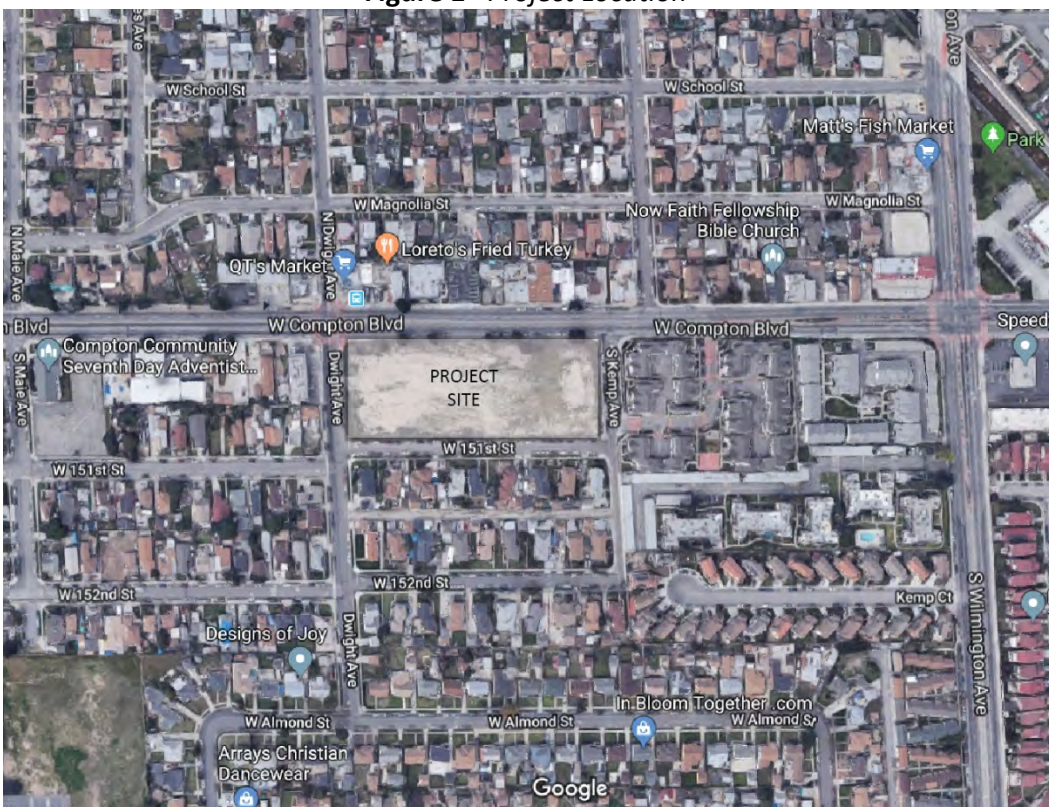
2.1 PROJECT DESCRIPTION

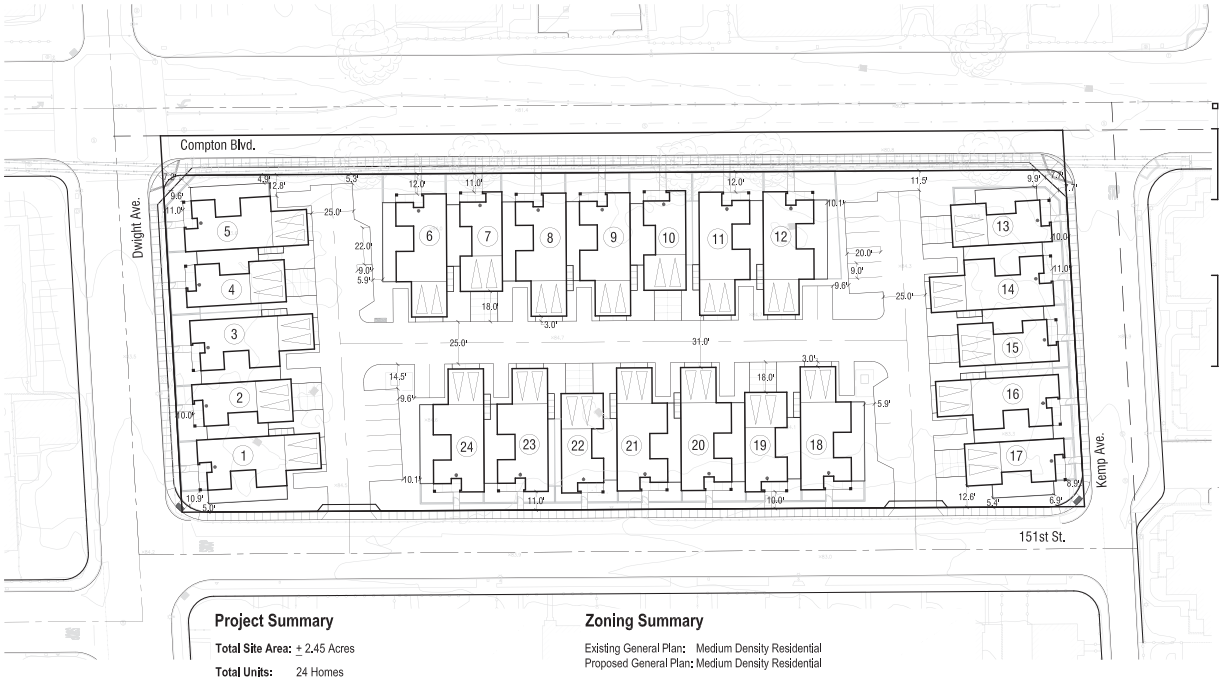
The proposed project is bounded by Compton Boulevard to the north, Kemp Avenue to the east, 151st Street to the south and Dwight Avenue to the west. The proposed project would consist of 24-single family dwelling units. The site is currently vacant. Site access is planned at two driveways on 151st Street.

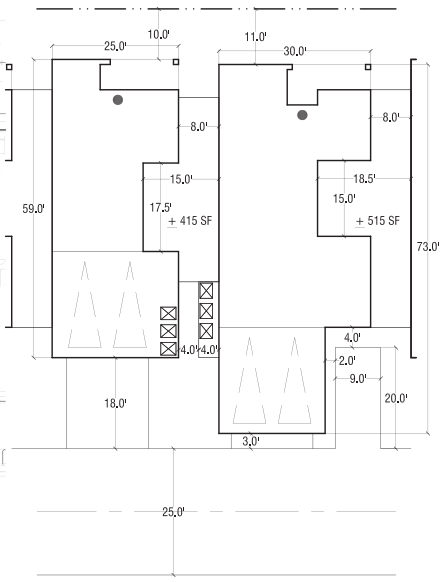
The proposed project is anticipated to be built and generating trips in 2021.

Figure 1 shows the project site location. ***Exhibit 1*** shows the proposed project site plan.

Figure 1– *Project Location*







Typical Lot Setbacks

Project Summary

Total Site Area: ± 2.45 Acres

Total Units: 24 Homes
- (9) Plan 1: ± 1,900 SF
- (15) Plan 2: ± 2,500 SF

Density: 9.8 Homes per Acre

Parking:

Required: 54 Spaces (2.25 spaces per home)
- (24) Homes x 2.0 Spaces = 48 Spaces
- (24) Guest x 0.25 Spaces = 6 Spaces

Provided: 99 Spaces (4.12 spaces per home)
- Garage: 48 Spaces (18' x 20' clear)
- Driveway: 18 Spaces (2 space/drive)
- Head In: 29 Spaces (9' x 20')
- Parallel: 4 Spaces (9' x 22')

Zoning Summary

Existing General Plan: Medium Density Residential
Proposed General Plan: Medium Density Residential

Existing Zoning: CL - Limited Commercial & P - Parking
Proposed Zoning: R-M-D - Medium Density Residential - Planned Development

Max. Density: 17.14 Homes per Acre (2,500 sf/home)

Proposed Setbacks:
Compton Blvd: 7'-8" to building
Dwight Ave: 9'-6" to building
Kemp Ave: 7'-8" to building
151st St: 8'-10"' to building

Building Separation: 8'

Max. Building Height: 35'

Notes:

1. Site plan is for conceptual purposes only.
2. Site plan must be reviewed by planning, building, and fire departments for code compliance.
3. Base information per civil engineer.
4. Civil engineer to verify all setbacks and grading information
5. Building Footprints might change due to the final design elevation style.
6. Open space area is subject to change due to the balcony design of the elevation.
7. Building setbacks are measured from property lines to building foundation lines.

2.2 STUDY AREA

The following intersection in the vicinity of the project site have been included in the intersection level of service (LOS) analysis based on submission of a scoping letter and receipt of comments back from City staff. The scoping letter and City response is provided in ***Appendix A.***

- Dwight Avenue (NS) at Compton Boulevard (EW)

This traffic analysis follows the *Los Angeles County Public Works Traffic Impact Analysis Report Guidelines (January 1, 1997)*.

Exhibit 2 shows the location of the study intersections, which are analyzed for the following study scenarios:

- Existing Conditions;
- Project Opening Year (2021) Without Project Conditions; and
- Project Opening Year (2021) With Project Conditions.

Traffic operations are evaluated for the following time periods:

- Weekday AM Peak Hour occurring within 7:00 AM to 9:00 AM; and
- Weekday PM Peak Hour occurring within 4:00 PM to 6:00 PM.

2.3 ANALYSIS METHODOLOGY

Level of Service (LOS) is commonly used to describe the quality of flow on roadways and at intersections using a range of LOS from LOS A (free flow with little congestion) to LOS F (severely congested conditions). The City of Compton and Los Angeles County utilize the Intersection Capacity Utilization (ICU) methodology for signalized intersection analysis. The ICU methodology expresses the LOS of an intersection in terms of the remaining capacity at an intersection (or lack thereof). The ICU methodology compares the volume-to-capacity (V/C) ratios of conflicting turn movements at an intersection, sums the critical conflicting V/C ratios for each intersection approach, and determines the intersection's overall capacity utilization. The resulting V/C ratio is converted to an LOS as shown in ***Table 1***.

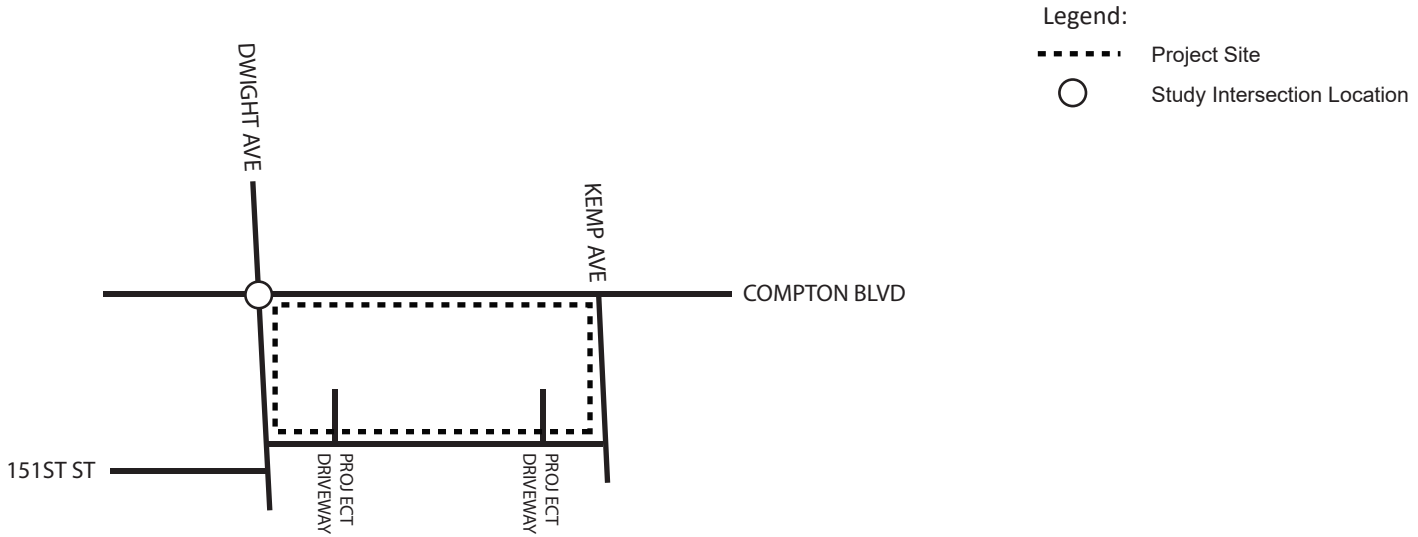

Exhibit 2: Study Intersection Locations

CVR-19-001 Compton & Kemp Traffic Impact Analysis

Not to Scale

Table 1
LOS & V/C Ranges

Level of Service	Volume to Capacity Ratio	Description
A	0.000 – 0.600	Free Flow: No approach phase is fully utilized and no vehicle waits longer than one cycle
B	0.601 – 0.700	Stable Flow: An occasional approach phase is fully utilized. Some drivers feel restricted in platoons.
C	0.701 – 0.800	Stable Flow: Major approach phases fully utilized. Most drivers feel restricted in platoons.
D	0.801 – 0.900	Tolerable Delays: Drivers may have to wait more than one cycle on occasion. Queues develop but dissipate rapidly and without excessive delays.
E	0.901 – 1.000	Unstable Operations: Volumes at or near capacity. Vehicles may wait several signal cycles. Long queues form upstream from intersection.
F	>1.000	Excessive Delays: Traffic flow breaks down, representing jammed conditions. Intersection operates below capacity. Queues may block upstream intersections.

This study utilizes a 1,900 vehicle per lane per hour saturation flow rate and a clearance interval of ten percent for the ICU analysis.

2.4 PERFORMANCE CRITERIA

The City of Compton has established level of service "D" or better as acceptable LOS for all intersections along the designated street and highway system in the General Plan Circulation Element.

2.5 THRESHOLDS OF SIGNIFICANCE

According to California Environmental Quality Act (CEQA) guidelines, a project is considered to cause a significant impact to a transportation system if it:

- Conflict with program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?
- Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?[1]
- Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?
- Result in inadequate emergency access?

For the purposes of analyzing CEQA impacts, the City of Compton utilizes the following Los Angeles County thresholds of significant to identify significant transportation impacts:

[1]CEQA Guidelines section 15064.3(c) provides that a lead agency "may elect to be governed by the provisions" of the section immediately; otherwise, the section's provisions apply July 1, 2020. Here, the City has not elected to be governed by Section 15064.3. Accordingly, an analysis of vehicles miles traveled (VMT) is not necessary to determine whether a proposed project will have a significant transportation impact.

- If an intersection is projected to operate at LOS C with the proposed project, and the proposed project increases the ICU by 0.040 or more, a significant impact is deemed to occur.
- If an intersection is projected to operate at LOS D with the proposed project, and the proposed project increases the ICU by 0.020 or more, a significant impact is deemed to occur.
- If an intersection is projected to operate at LOS E/F with the proposed project, and the proposed project increases the ICU by 0.010 or more, a significant impact is deemed to occur.

3.0 Existing Conditions

3.1 EXISTING CIRCULATION NETWORK/STUDY AREA CONDITIONS

The characteristics of the roadway system in the vicinity of the proposed project site are described in ***Table 2.***

Table 2
Roadway Characteristics Within Study Area

Roadway	Classification[1]	Direction	Existing Travel Lanes	Median Type	Speed Limit (mph)	On-Street Parking
Compton Boulevard	Secondary Highway	East-West	4	None	35	Yes
Dwight Avenue	Local Street	North-South	2	None	25	Yes
Kemp Avenue	Local Street	North-South	2	None	25	Yes
151st Street	Local Street	East-West	2	None	25	Yes

1: Sources: City of Compton General Plan Circulation Element

Exhibit 3 shows existing conditions study area intersection and roadway geometry.

3.2 CITY OF COMPTON GENERAL PLAN CIRCULATION ELEMENT

The proposed project site is located within the City of Compton. ***Appendix B*** contains the current Compton General Plan Circulation Element future transportation network and roadway classifications.

3.3 EXISTING BICYCLE AND PEDESTRIAN FACILITIES

There are no bicycle lanes on study area roadways. Sidewalks and curb ramps at intersections are present in the study area, except on the east side of Dwight Avenue along the project's frontage and on the north side of 151st Street along the project's frontage, where they are absent.

The proposed project is consistent with the City of Compton Bicycle Master Plan (May, 2015).

Appendix B contains Compton General Plan Circulation Element Bikeway Plan.

3.4 EXISTING PUBLIC TRANSIT SERVICES

The City of Compton is served by Los Angeles Metro which provides bus service throughout Los Angeles County. ***Figure 2*** shows the Metro routes in the vicinity of the City of Compton. Additionally, the Compton Renaissance Transit System provides limited local service within the City of Compton.

Source: Google Earth, 2019

Exhibit 3: Existing Lane Geometry & Intersection Control

CVR-19-001 Compton & Kemp Traffic Impact Analysis

Not to Scale

Figure 2– *LA Metro Transit Routes*

There is one bus route within one-quarter mile of the proposed project site.

Metro Route 51/351 travels between the Wilshire/Vermont Purple Lane Station to the Compton Transit Center. In the vicinity of the proposed project, Route 51/351 runs along Compton Boulevard with a stop at the Compton Boulevard/Dwight Avenue intersection adjacent to the project site. Route 51/351 runs from 5:00 AM to 10:00 PM on weekdays with headways of 20-35 minutes and on weekends with 30-45 minute headways.

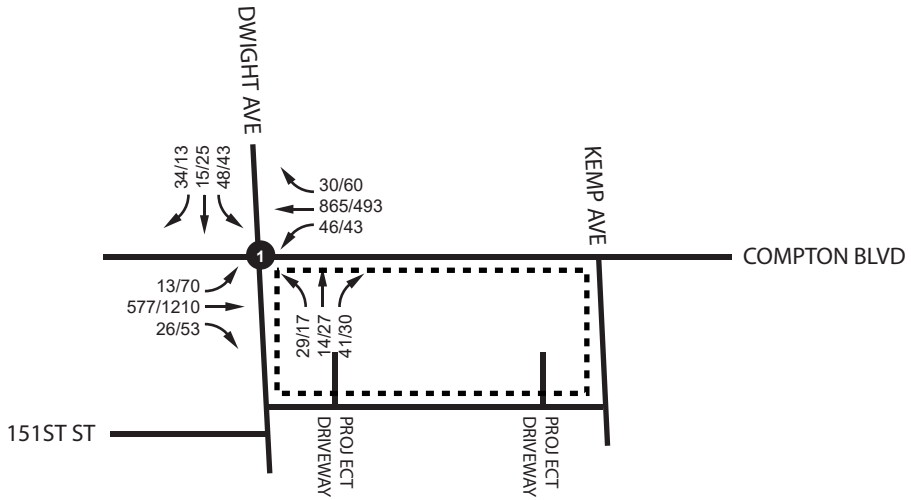
3.5 EXISTING TRAFFIC VOLUMES

To determine the existing operation of the study intersection, AM and PM peak period traffic counts at the study intersections were collected on Thursday June 6th, 2019. The traffic volumes used in this analysis are from the highest hour within the peak period counted. Detailed traffic count data is provided in ***Appendix C***.

Exhibit 4 shows existing AM and PM peak hour volumes at the study intersection.

3.6 EXISTING CONDITIONS INTERSECTION LEVEL OF SERVICE ANALYSIS

Existing conditions AM and PM peak hour intersection analysis is shown in ***Table 3***. Calculations are based on the existing geometrics at the study intersection as shown in ***Exhibit 3.*** ICU analysis sheets are provided in ***Appendix D***.



Legend:

XX/XX AM/PM Peak Hour Volumes

Table 3
Intersection Analysis – Existing Conditions

Intersection	Control Type	Peak Hour	Existing Conditions
			V/C – LOS
Dwight Avenue/Compton Boulevard	Signal	AM	0.490 – A
		PM	0.626 – B

Note: V/C = volume-to-capacity ratio. Delay shown in seconds. Delay/LOS at project driveway shown for worst operating minor street movement.

As shown in ***Table 3***, the study intersection is currently operating at an acceptable LOS (LOS B or better) during the AM and PM peak hours.

4.0 Proposed Project

4.1 Project Description

The proposed project is bound by Compton Boulevard to the north, Kemp Avenue to the east, 151st Street to the south and Dwight Avenue to the west. The proposed project would consist of 24-single family dwelling units. The site is currently vacant. Site access is planned at two driveways on 151st Street.

The proposed project is anticipated to be built and generating trips in 2021.

Exhibit 1 previously showed the proposed site plans for the proposed project.

4.2 Project Trip Generation

Trip generation represents the amount of traffic, both inbound and outbound, produced by a development. Determining trip generation for a proposed project is based on projecting the amount of traffic that the specific land uses being proposed will produce.

Industry standard *Institute of Transportation Engineers (ITE) Trip Generation Manual (10th Edition, 2017)* trip generation rates were used to determine trip generation of the proposed project.

Table 4 shows the ITE 10th Edition trip generation rates used to calculate forecast trip generation of the proposed project.

Table 4
Trip Generation Rates for Proposed Project Land Use

Land Use (ITE Code)	Unit	AM Peak Hour			PM Peak Hour			Daily Trips
		In	Out	Total	In	Out	Total	
Single Family Residential (210)	DU	0.185	0.555	0.74	0.624	0.366	0.99	9.44

Note: DU = Dwelling Unit
Source: ITE Trip Generation, 10th Edition (2017).

Table 5 shows the projected increase in trip generation resulting from the proposed project.

Table 5
Trip Generation of Proposed Project

Land Use	Quantity	AM Peak Hour			PM Peak Hour			Daily Trips
		In	Out	Total	In	Out	Total	
24 Single - Family Dwelling Units	24 DU	5	13	18	15	9	24	227

Note: DU = Dwelling Unit

As shown in ***Table 5,*** the proposed project is forecast to generate approximately 18 AM peak hour trips, 24 PM peak hour trips and 227 daily trips.

4.3 Project Trip Distribution

Projecting trip distribution involves the process of identifying probable destinations and traffic routes that will be utilized by the proposed project's traffic. The potential interaction between the proposed land use and surrounding regional access routes are considered to identify the probable routes onto which project traffic would distribute. The projected trip distribution for the proposed project is based on anticipated travel patterns to and from the project site.

Exhibit 5 shows the projected trip distribution of proposed project trips.

4.4 Modal Split

The traffic reducing potential of public transit, walking and bicycling have not been considered in this analysis since transit facilities in the study area are limited.

4.5 Project Trip Assignment

Exhibit 6 shows the corresponding projected AM/PM peak hour trip assignment of project trips.

4.6 Traffic Management Plan

Stop signs will be installed at the project driveways for vehicles exiting the project site onto 151st street. Fire access will not be needed, in case of fires the fire department will fight the fires from outside the development. No parking signs will be posted throughout the site as needed or required by City standards.

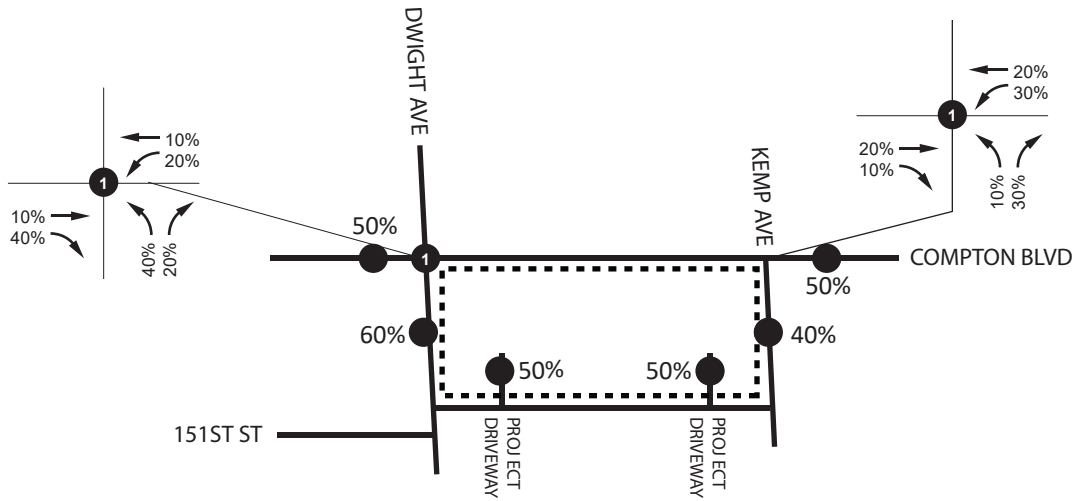

Exhibit 5: Projected Trip Distribution of Proposed Project Trips

5.0 Project Opening Year Without Project Conditions

5.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for the *project opening year without project* scenario are consistent with those previously shown in ***Exhibit 3***.

5.2 PROJECT OPENING YEAR WITHOUT PROJECT TRAFFIC VOLUMES

Project Opening Year Without Project traffic volumes consist of existing volumes plus application of an annual ambient growth rate to the project opening year, which in this case is 2021. The ambient growth rate used in this analysis is based on feedback provided on the scoping letter, which recommended a growth rate of 2% per year, applied for two years, to existing volumes to account for ambient traffic growth and any small cumulative development that occurs.

Project Opening Year Without Project Volumes = (Existing (2019) Counts * 1.02^2)

Exhibit 7 shows *project opening year without project* AM and PM peak hour volumes at the study intersections.

5.3 PROJECT OPENING YEAR WITHOUT PROJECT LEVEL OF SERVICE ANALYSIS

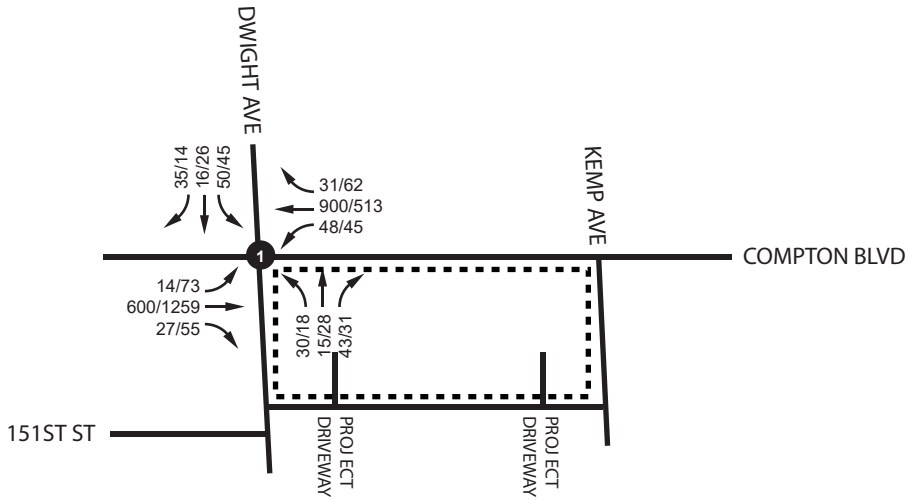
Project opening year without project conditions AM and PM peak hour intersection analysis is shown in ***Table 6.*** Calculations are based on the existing geometrics at the study intersection as shown in ***Exhibit 3.*** ICU analysis sheets are provided in ***Appendix D***.

Table 6
Intersection Analysis – Project Opening Year Without Project Conditions

Intersection	Control Type	Peak Hour	Existing Conditions	Project Opening Year Without Project
			V/C – LOS	V/C – LOS
Dwight Avenue/Compton Boulevard	Signal	AM	0.490 – A	0.501 – A
		PM	0.626 – B	0.648 – B

Note: V/C = volume-to-capacity ratio. Delay shown in seconds. Delay/LOS at project driveway shown for worst operating minor street movement.

As shown in ***Table 6***, the study intersection is projected to continue to operate at an acceptable LOS (LOS B or better) during the AM and PM peak hours for *project opening year without project conditions.*



Legend:

XX/XX AM/PM Peak Hour Volumes

Project Site

Exhibit 7: Project Opening Year
Without Project AM/PM Peak Hour Traffic Volumes

CVR-19-001 Compton & Kemp Traffic Impact Analysis

Not to Scale

6.0 Project Opening Year With Project Conditions

Project opening year with project conditions analysis is intended to identify the project-related impacts on the existing circulation system.

6.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for the *project opening year with project* scenario are consistent with those previously shown in **Exhibit 3**.

6.2 PROJECT OPENING YEAR WITH PROJECT TRAFFIC VOLUMES

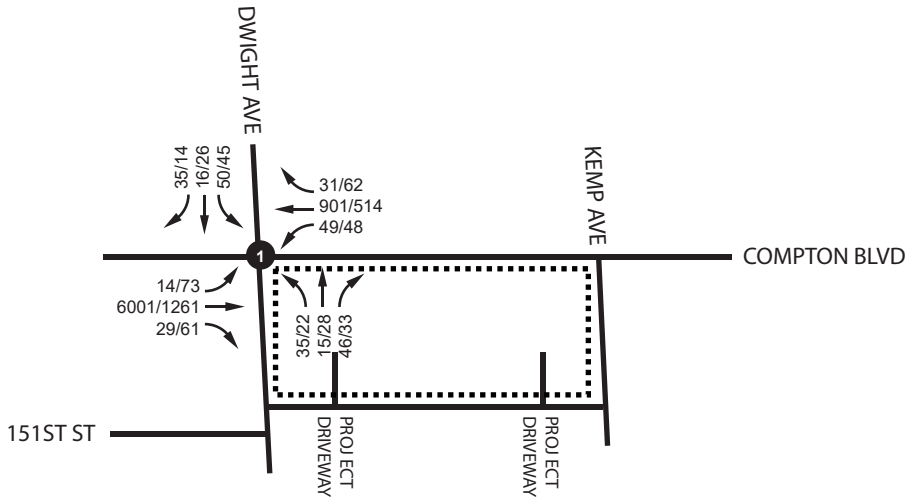
Project Opening Year With Project traffic volumes consist of existing volumes plus application of an annual ambient growth rate to the project opening year, which in this case is 2021, plus project trips. The ambient growth rate used in this analysis is based on feedback provided on the scoping letter, which recommended a growth rate of 2% per year, applied for two years, to existing volumes to account for ambient traffic growth and any small cumulative development that occurs.

Project Opening Year With Project Volumes = (Existing (2019) Counts * 1.02^2) + Project Traffic

Exhibit 8 shows *project opening year with project* AM and PM peak hour volumes at the study intersection.

6.3 PROJECT OPENING YEAR WITH PROJECT INTERSECTION LEVEL OF SERVICE ANALYSIS

Project opening year with project conditions AM and PM peak hour intersection analysis is shown in ***Table 7***. ICU analysis sheets are provided in ***Appendix D.***



Legend:

XX/XX AM/PM Peak Hour Volumes

Project Site

Exhibit 8: Project Opening Year
With Project AM/PM Peak Hour Traffic Volumes

CVR-19-001 Compton & Kemp Traffic Impact Analysis

Not to Scale

Table 7
Intersection Analysis – Project Opening Year With Project

Intersection	Control Type	Peak Hour	Existing Conditions	Project Opening Year Without Project	Project Opening Year With Project		
			V/C – LOS	V/C – LOS	V/C – LOS	Change in V/C	Significant Impact?
Dwight Avenue/Compton Boulevard	Signal	AM PM	0.490 – A 0.626 – B	0.501 – A 0.648 – B	0.505 – A 0.656 – B	0.004 0.008	No

Note: V/C = volume-to-capacity ratio. Delay shown in seconds. Delay/LOS at project driveway shown for worst operating minor street movement.

As shown in ***Table 7***, the study intersection is projected to continue to operate at an acceptable LOS (LOS B or better) for *project opening year with project* conditions.

Based on the thresholds of significance previously discussed in section 2.4, the addition of project generated trips does not result in any significant impacts at the study intersection.

7.0 Site Access and Sight Distance

This section summarizes proposed site access and on-site circulation recommendations.

7.1 ON-SITE ROADWAY IMPROVEMENTS

The recommended site-adjacent roadway improvements are described below.

Wherever necessary, roadways adjacent to the proposed project site and site access points should be constructed in compliance with recommended roadway classifications and respective cross-sections in the City of Compton General Plan Circulation Element or as directed by the City Engineer.

7.2 SIGHT DISTANCE ANALYSIS

A sight distance analysis for the proposed project driveway has been prepared based on the "stopping sight distance" requirements determined by Topic 201 and Table 201.1 of the *Caltrans Highway Design Manual* (HDM), latest edition. ***Table 8*** shows the minimum stopping sight distances based on the design speed, as displayed in Table 201.1 of the HDM.

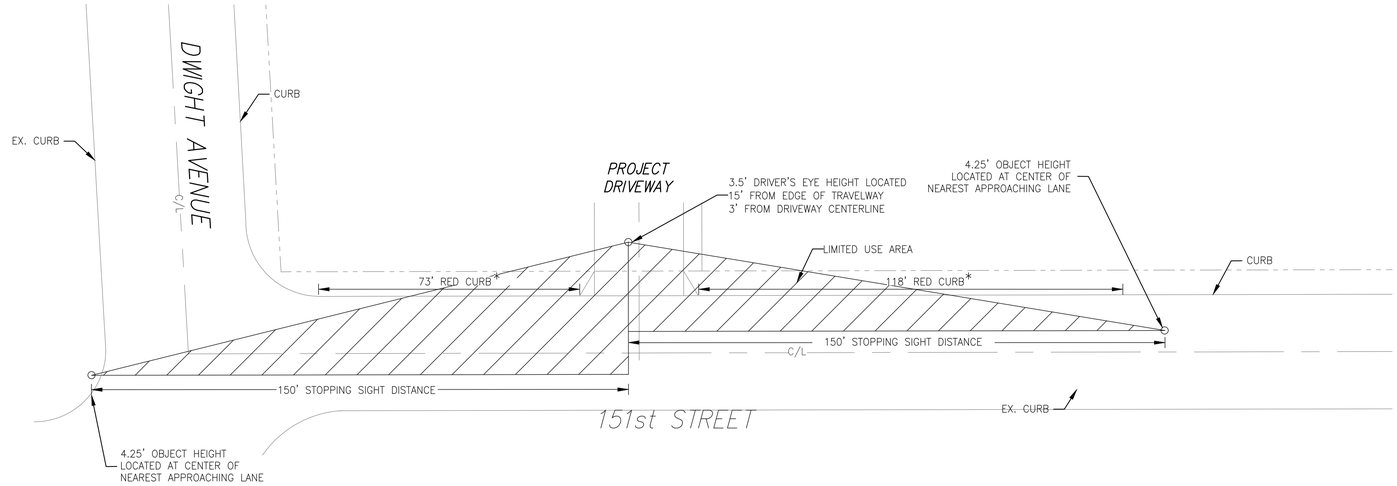
Table 8
Stopping Sight Distance

Design Speed (mph)	Stopping Sight Distance (ft)
25	**150**
30	200
35	250
40	300
45	360
50	430

Source: Table 201.1, Highway Design Manual (July 2, 2018)
Note: mph = miles per hour; ft = feet

In this analysis, the movements being analyzed at the Project Driveway intersections are movements from the exiting vehicles onto 151st Street. Since there is no posted speed limit on 151st Street between Dwight Avenue and Kemp Avenue, the 85th percentile speed is assumed to be 25 miles per hour.

Exhibit 9 displays the sight distance conditions at the project driveway in relation to the existing sidewalk, striping, and parking on 151st Street. The exhibit shows the required 15-foot setback from the edge of travel way and the 15-feet of sight distance required based on the assumed 85th percentile speed of 25 miles per hour.



151st STREET IS A LOCAL ROAD WITH A PRIMA FACIA SPEED LIMIT OF 25 MPH. TABLE 201.1 OF THE HDM, RECOMMENDS 150-FEET OF STOPPING SIGHT DISTANCE.

* NOTE: SECTION 405.1 OF THE HDM RECOMMENDS PARKING RESTRICTIONS ON URBAN DRIVEWAYS BE SET PER CA MUTCD SECTION 3B.19. SECTION 3B.19 RECOMMENDS A CLEARANCE OF **6-FEET** MEASURED FROM CURB RETURN SHOULD BE PROVIDED AT BOTH SIDES OF A DRIVEWAY.

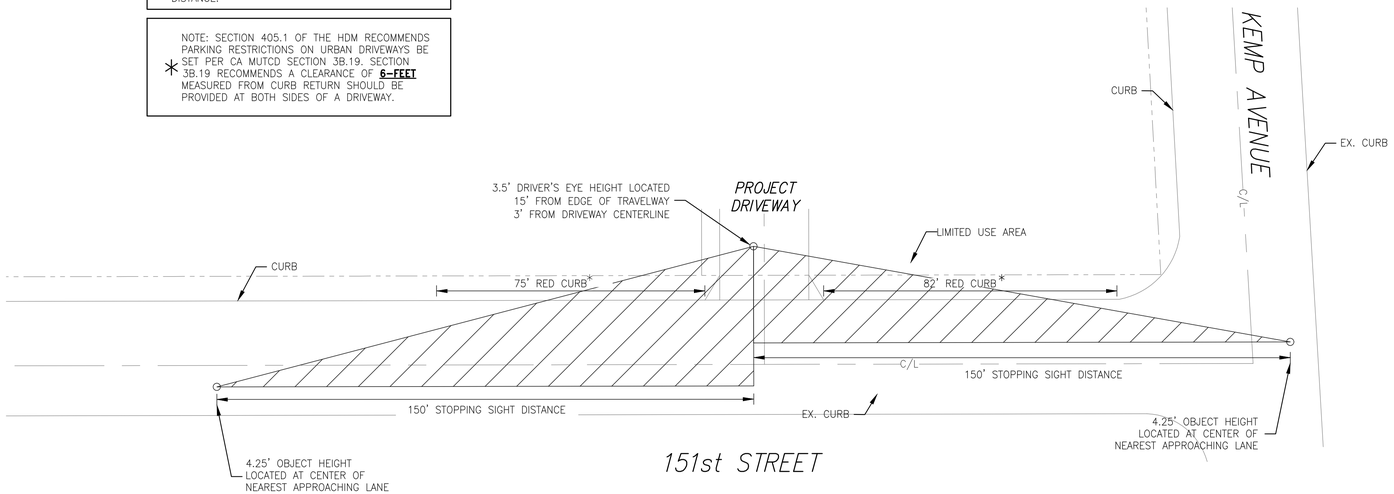


EXHIBIT 9: SIGHT DISTANCE ANALYSIS
CVR-19-001 COMPTON & KEMP TRAFFIC IMPACT ANALYSIS
Date: 09/30/21

SCALE: 1" = 20'
10 0 10 20 30

As shown in ***Exhibit 9***, the stopping sight distance requirements would be impaired by existing parking 151st Street west and east of the driveways. To meet the stopping sight distance standard, approximately 348 feet of red-curb would need to be painted on the north side of 151st Street.

TJW notes that Section 405.1 of the Highway Design Manual recommends that parking restrictions on urban driveways be set per California Manual on Uniform Traffic Control Devices (CA MUTCD) Section 3B.19. Section 3B.19 recommends a clearance of 6-feet measured from the curb return should be provided at both sides of a driveway. It is TJW's recommendation that the CA MUTCD guidance be followed and a clearance of 6-feet be provided at both sides of the driveway.

8.0 Parking

The proposed project consists of 24 single family dwelling units. *Table 30.-21.A Parking Space Requirements* in the City of Compton Zoning Code contains minimum parking requirements for various land uses in the City.

Single family dwelling units are required to provide two enclosed spaces per dwelling unit. The proposed project would be required to provide 48 enclosed parking spaces.

The proposed project is providing two-car garages for every dwelling unit, with driveways that provide an additional two uncovered parking spaces per unit, as well as six on-street guest parking spaces, meeting code requirements whether analyzed as single family dwelling units.

Providing access to the proposed project will result in the loss of up to 6-8 on-street parking spaces on the north side of 151st Street between Dwight Avenue and Kemp Avenue due to the construction of two driveways with 6-feet of red curb on both sides of the driveways.

TJW collected on-street parking counts on the streets surrounding the project site in the afternoon and evening on Wednesday June 19th, 2019 from 4:00 PM to 12:00 AM to assess the existing parking inventory and occupancy. Evening hours were chosen since the overnight period is the peak period of parking demand for the residential uses adjacent to the site. Since the on-street parking supply is not striped, the inventory of each block face was projected based on observations in the field. And measurements of curb space.

The parking areas assessed were the south side of Compton Boulevard between Dwight Avenue and Kemp Avenue, both sides of Dwight Avenue between Compton Boulevard and 151St Street, both sides of 151st Street between Dwight Avenue and Kemp Avenue, and both sides Kemp Avenue between Compton Boulevard and 151st Street.

Table 9 summarizes the results of the parking inventory and occupancy counts. Detailed data, which was collected in 30 minute increments, is available in ***Appendix E***.

As shown in Table 9, there are approximately 94 on-street parking spaces on the streets surrounding the project site. The peak period of observed parking demand was at 11:00 PM – 12:00 AM, when 61 vehicles were parked in the survey area, for an overall occupancy of 65%. While certain streets, such as 151st Street and Kemp Avenue were over 80% occupied, Dwight Avenue and Compton Boulevard were under 50% full.

Based on the parking data collection, there is adequate on-street parking availability nearby to accommodate any displacement from the loss of 6-8 on-street parking spaces on 151st Street.

Table 9

9.0 Signal Warrant Analysis

A signal warrant analysis was conducted at the intersection of Compton Boulevard and Kemp Avenue. Compton Boulevard is classified as a four-lane secondary highway and has a posted speed limit of 35 miles per hour. Kemp Avenue is classified as a two-lane local street and has no posted speed limit. The intersection currently operates as a two-way stop intersection with the off-set Kemp Avenue approaches being stop controlled. Traffic counts were conducted at the intersection on Wednesday August 21, 2019.

Traffic signal warrants for project opening year with project conditions were prepared. Because the speed limit on Compton Boulevard is 35 miles per hour, Figure 4C-3 of the *California Manual on Traffic Control Devices* was used to evaluate the conditions at the intersection. ***Table 10*** summarizes the results of the signal warrant analysis. Detailed warrant analysis sheets are included in Appendix F.

Table 10
Signal Warrant Analysis

Intersection	Signal Warrants Met?	
	AM Peak Hour	PM Peak Hour
Compton Boulevard/Kemp Avenue	No	No

As shown in ***Table 10***, peak hour signal warrants are not met for project opening year with project conditions. Signalization of the Compton Boulevard/Kemp Avenue intersection is not recommended.

SCOPING AGREEMENT/SCOPING EMAILS

TJW ENGINEERING, INC.
TRAFFIC ENGINEERING &
TRANSPORTATION PLANNING
CONSULTANTS

May 7, 2019

Mr. Hien Nguyen, PE
Assistant City Engineer
City of Compton
205 S Willowbrook Ave
Compton CA 90220

Report: Scoping Agreement for the Compton & Kemp Residential Project Traffic Impact Analysis

Dear Mr. Nguyen:

TJW ENGINEERING, INC. (TJW) is pleased to submit this scoping agreement for the proposed Compton & Kemp residential project in the City of Compton. The project site is bound by Compton Boulevard to the north, Kemp Avenue to the east, W 151st Street to the south and Dwight Avenue to the west. The proposed project consists of 24 single-family dwelling units.

The Project's site plan is attached to this scoping letter. The project is anticipated to be built and generating trips in 2021. Site access is planned at two driveways on W 151st Street.

The traffic impact analysis will follow applicable City of Compton and Los Angeles County guidelines for traffic impact analysis.

Trip Generation

Trip generation for the proposed project will be developed using rates from the Institute of Transportation Engineers (ITE) Trip Generation Manual (10th Edition) for Land Use 210 – Single-Family Detached Housing. As shown in Table 1, the project is anticipated to generate 227 daily trips, 18 AM peak hour trips, and 24 PM peak hour trips.

Table 1: Proposed Project Trip Generation

Proposed Land Use[1]	Qty/ Unit	Daily Trips (ADTs)		AM Peak Hour					PM Peak Hour				
		Rate	Volume	Rate	In:Out Split	Volume			Rate	In:Out Split	Volume		
						In	Out	Total			In	Out	Total
Single-Family Detached Housing (210)	24 DU	9.44	**227**	0.74	25:75	4	14	18	0.99	63:37	15	9	24

[1]: Rates from ITE Trip Generation (10th Edition, 2017)

Trip Distribution and Assignment

The project site is situated within a large rectangle formed by the 105, 110, 710 and 91 freeways. Project trips are generally projected to arrive/depart via Compton Boulevard and head to/from other major arterials to access freeways for work related trips, and to utilize local streets for other trips. The proposed project's trip distribution assumes that 50% of project trips will arrive/depart from/to the west on Compton Boulevard and 50% of project trips will arrive/depart from/to the east on Compton Boulevard.

Study Area

turning movement counts to be conducted on 5/29, 5/30, 6/4, 6/5, or 6/6/19 between 4p and 6p

Based on ~~the trip generation~~, the following two (2) intersections will be analyzed in the level of service analysis:

1. Compton Boulevard/Dwight Avenue; and
2. ~~Compton Boulevard/Kemp Avenue.~~

PM

County

Study Analysis Scenarios

Consistent with Los Angeles traffic study guidelines, the analysis of peak hour operations at study area intersection will occur for the following scenarios:

(1) Existing Traffic Conditions;
~~(2) Existing Plus Project Conditions;~~
(3) Project Opening Year Without Project Conditions; and
(4) Project Opening Year With Project Conditions.

With opening year being 2021, assume existing traffic volumes will increase by 4% in 2 years.

The Intersection Capacity Utilization (ICU) methodology will be used in the analysis per the Los Angeles County traffic impact analysis guidelines.

Level of Service Criteria

The City of Compton target for peak hour intersection operations is LOS D or better.

For the purposes of analyzing California Environmental Quality Act (CEQA) impacts, the City of Compton identifies significant impacts based on a comparison of the without and with project ICU at study intersections according to the following criteria:

- If an intersection is projected to operate at LOS C with the proposed project, and the proposed project increases the ICU by 0.040 or more, a significant impact is deemed to occur.
- If an intersection is projected to operate at LOS D with the proposed project, and the proposed project increases the ICU by 0.020 or more, a significant impact is deemed to occur.
- If an intersection is projected to operate at LOS E/F with the proposed project, and the proposed project increases the ICU by 0.010 or more, a significant impact is deemed to occur.

~~***Cumulative Projects***~~

TJW will obtain a list of cumulative projects from the City. TJW will utilize this list to determine which cumulative projects should be included in the cumulative conditions analysis. If the City has any information on the cumulative projects such as trip generation and trip distribution patterns for each project, or prior completed traffic studies, TJW requests that this information be forwarded to us electronically.

Please feel free to call us at (949) 878-3509 if you have any questions regarding this scoping letter.

Signal Warrant Analysis
TJW will conduct turning movement counts at West Compton Blvd. and Kemp Ave. from 4p to 6p on 5/29, 5/30, 6/4, 6/5 or 6/6/19. Based on these counts, TJW will evaluate Signal Warrants 2 (Four Hour) and 3 (Peak Hour) for the intersection under Opening Year (2021) with Project Conditions.

Sincerely,

TJW ENGINEERING, INC.

Typical Lot Setbacks

Project Summary

Total Site Area: ± 2.45 Acres

Total Units: 24 Homes
- (8) Plan 1: ± 1,700 SF, 3 bedroom
- (16) Plan 2: ± 1,900 SF, 3 bedroom, opt. bed 4

Density: 9.8 Homes per Acre

Parking:

Required: 54 Spaces (2.25 spaces per home)
- (24) Homes x 2.0 Spaces = 48 Spaces
- (24) Guest x 0.25 Spaces = 6 Spaces

Provided: 102 Spaces (4.25 spaces per home)
- Garage: 48 Spaces (18' x 20' clear)
- Driveway: 48 Spaces (2 space/drive)
- Parallel: 6 Spaces (9' x 22')

Open Space:

Provided: 14,050 S.F. Total (585 S.F. per home)
- Common: 5,390 S.F. (10' Min. Dimension)
- Private: 8,660 S.F. (10' Min. Dimension)

Zoning Summary

Existing General Plan: Medium Density Residential
Proposed General Plan: Medium Density Residential

Existing Zoning: CL - Limited Commercial & P - Parking
Proposed Zoning: R-M-D - Medium Density Residential - Planned Development

Max. Density: 17.14 Homes per Acre (2,500 sf/home)

Proposed Setbacks:
- Compton Blvd: 15' to building; 9' to covered porch
- Dwight Ave: 15' to building; 12' to covered porch
- Kemp Ave: 15' to building; 12' to covered porch
- 151st St: 14' to single story element (building 1 & 17); 15' to front of building; 9' to covered porch

Building Separation: 10'

Max. Building Height: 35'

Notes:
1. Site plan is for conceptual purposes only.
2. Site plan must be reviewed by planning, building, and fire departments for code compliance.
3. Base information per civil engineer.
4. Civil engineer to verify all setbacks and grading information.
5. Building Footprints might change due to the final design elevation style.
6. Open space area is subject to change due to the balcony design of the elevation.
7. Building setbacks are measured from property lines to building foundation lines.

Subject: 930 W. COMPTON BLVD PROJECT---1ST COMMENTS ON SCOPE OF TRAFFIC STUDY

Hello Gentlemen,

Per your request, please find Public Works Dept.'s Comments on "TIA Scope" as follows:

1. The TIA shall follow the LACDPW's guidelines

2. For safety of the public: The TIA shall include, but not limited to, the following:

   - A "Line Sight Study" [LSS] for traffic exiting the site onto 151st Street.
   - Traffic Management Plan for the site development including, but not limited to, fire lanes, no parking signs, stop signs for traffic exiting the site onto 151st Street, etc.

3. For info on list of related projects [within 1.5-mile radius of the site]: Please contact Mr. Troy Gunther of Planning Dept.

4. Impact of on-street parking surrounding the site and mitigation measures

5. PW Dept. will accept the ICU methodology, and the following softwares:

   - HCS version 2000 or later version,
   - Synchro V7 or later version
   - Traffix (Dowling) v.7.6 or later version
   - VISTRO
   - or other equivalent softwares

Please find the attached file prepared by Public Works Plan Check Consultant Willdan Engineering as a part of the composite PW Dept.'s comments on your proposed TIA Scope.

Thanks

APPENDIX B

COMPTON GENERAL PLAN ROADWAY CLASSIFICATIONS AND CROSS SECTIONS

CIRCULATION PLAN

The "Circulation Issues" discussion in this element identifies the long-term transportation and circulation concerns in Compton. This section describes the programs and strategies the City will pursue to address these issues and to move towards a balanced transportation system that meets the future mobility needs of Compton residents, as well as the business sector's demand to move goods most efficiently and effectively.

MASTER PLAN OF STREETS AND HIGHWAYS

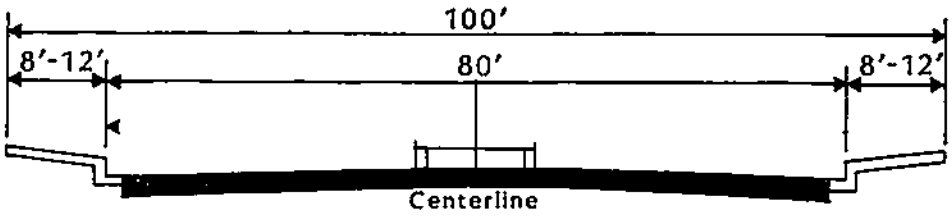
Streets and highways in Compton are described and classified according to their primary function. This hierarchical system of roadways consists of the following four basic classifications:

- Major Highway;
- Secondary Highway;
- Collector; and
- Local Street.

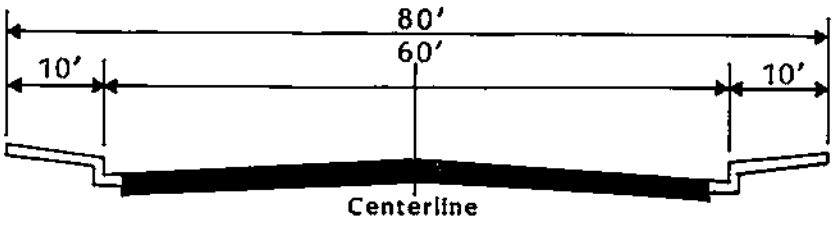
Figure C-1 illustrates the roadway cross-section standards (geometrics) for these five classifications. Roadway functions and standards may be described as follows.

Major Highway

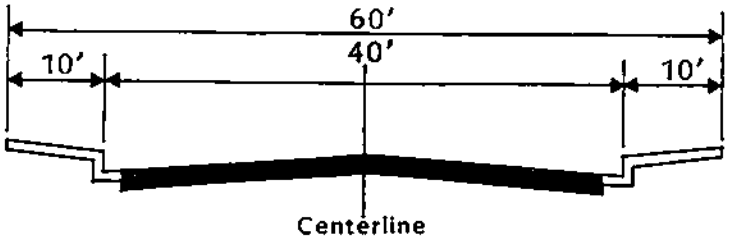
A Major Highway is the highest capacity street within the City's street system. Major Highways are designed to carry high volumes of traffic, primarily for through trips. They serve as the principal connectors from lower classification streets to the freeway system and other regional routes. The standard calls for 100 feet of right-of-way and four to six travel lanes within a minimum 80-foot wide, curb-to-curb paved street section. The right-of-way and paved road width can be increased at and near intersections to allow for median strips and extra turn lanes.



Major Highway (a)

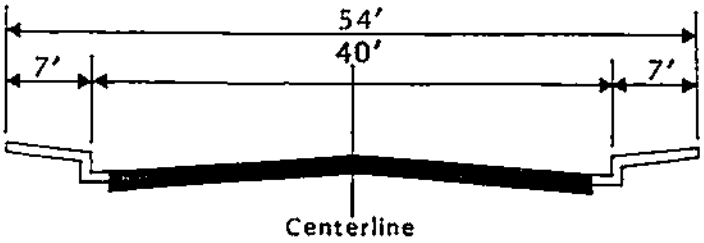


Secondary Highway



4' minimum sidewalk on both sides

Standard Collector



4' minimum sidewalk on both sides

Residential Collector

12/3/91

(a) Major Highway right-of-way may be increased to accomodate center median or extra turn lanes at intersections.

(b) All roadbed widths shown are minimums.

Figure C - 1
Standard Street Cross Sections

Major Highways in the Compton planning area include El Segundo Boulevard (west of Santa Fe Avenue), Rosecrans Avenue, Alondra Boulevard, Artesia Boulevard (east of Alameda), Victoria/Apra Street, Avalon Boulevard, Central Avenue, Wilmington Avenue, Santa Fe Avenue, Long Beach Boulevard, and Atlantic Avenue.

Secondary Highway

Secondary Highways connect Major Highways to collector and local streets and are intended to carry relatively high traffic volumes for both through and local trips. A Secondary Highway consists of 80 feet of right-of-way and four travel lanes within a 60-foot, curb-to-curb paved section.

The Secondary Highways in Compton are 135th Street, Compton Boulevard, Greenleaf Boulevard, Walnut Street, Willowbrook Avenue, Tamarind Avenue, Mona Boulevard, Temple Avenue, Bullis Road, Compton Avenue, and Artesia Boulevard (west of Alameda).

Collectors

Two Collector classifications are included within the street system - the Standard Collector and the Residential Collector. Standard Collectors serve the City's major industrial and commercial areas and high density residential developments and are designed to carry moderate to relatively high volumes of traffic to the Secondary and Major Highways, while avoiding lower density residential neighborhoods. The Residential Collector accommodates moderate traffic volumes and is intended to carry residential traffic from the neighborhoods to schools, parks, and shopping areas.

Standard Collectors contain slightly more right-of-way than Residential Collectors, consisting of 40 feet of paving within a 60-foot right-of-way width. The Residential Collector has a 40-foot paved section and a minimum 54-foot right-of-way. Collector streets will be designated as part of a special study.

Local Streets

Local Streets are designed to carry low volumes of local (non-through) traffic. Locals connect to Collectors and Highways for through trips. Standards for Local Streets are variable, given the variety of residential subdivisions which have been developed since Compton incorporated as a City.

Study Street

Alameda Street is designated as a Study Street since street width and configuration will be determined as part of the Alameda Corridor design study.

Critical Intersections

Figure C-2 identifies several intersections as "critical intersections." These are locations where, over time, right-of-way beyond the standard rights-of-way illustrated in Figure C-1 may be needed to accommodate additional turn lanes. Traffic volumes may be more easily managed if a dedicated right-turn lane, dual left-turn lanes, or other non-standard configurations are provided.

Master Plan

Figure C-2 presents the Master Plan of Streets and Highways for Compton. This plan shows the ultimate circulation system needed to move people and goods within and through the City while maintaining roadway service levels of Level of Service D or better. The system incorporates regional infrastructure and public transit improvements and plans, and accommodates the City's specific transportation needs. Physical road improvements will be necessary to achieve this system, including road widenings, roadway reconfiguration, construction of the Alameda Corridor, and grade separations at railroad crossings.

Road Widenings: Several Major and Secondary Highways will require widening and restriping to provide consistent widths and to accommodate future traffic volumes. In particular, the following improvements will be made.

- Central Avenue between Rosecrans Avenue and Compton Boulevard will be widened and restriped to provide a six-lane divided highway.

- Wilmington Avenue between the Artesia Freeway and Victoria Street will be widened and restriped to provide a six-lane divided highway.

- Greenleaf Boulevard between Wilmington Avenue and Santa Fe Avenue will be widened to provide a four-lane divided roadway.

- Long Beach Boulevard, from the north City limit to Rosecrans Avenue, will be widened and restriped to provide a six-lane divided roadway.

To accomplish street widenings, the City will undertake a comprehensive approach. This requires that the City schedule the improvement in a Capital Improvement Plan (CIP) and acquire right-of-way through eminent domain or permanent on-street parking restrictions.

These identified widenings will be performed over the 20-year General Plan planning period (before the year 2010). The City will monitor roadway volumes over time to determine the timing and approach for the improvements.

Roadway Reconfiguration: Along many road sections, right-of-way width exists consistent with the Master Plan. However, efficient traffic movement is hindered by uncontrolled access from feeder streets and from development fronting on Highways and Collectors. To allow for better flow, the City may provide raised medians (divided roadways) along the following street segments:

- Wilmington Avenue between Compton Boulevard and the Artesia Freeway;

- Long Beach Boulevard between the north City limits and the Artesia Freeway (virtually its entire length through Compton); and

- Rosecrans Avenue between Santa Fe Avenue and Long Beach Boulevard.

If studies indicate these improvements can significantly improve traffic flow, improvements will be completed before the year 2005.

Alameda Corridor: As described previously in this element, the Alameda Corridor represents a major improvement to the regional transportation system (Figure C-2). The corridor, planned to connect the ports of Los Angeles and Long Beach to multi-modal goods distribution facilities near downtown Los Angeles, is described as "a critical link for the movement of local and international cargo."[1] This road and rail freight route is intended to reduce through truck traffic on parallel streets and freeways, especially heavily-traveled Interstate 710, and to consolidate freight rail traffic to a single corridor, thus reducing rail/surface street conflicts.

As a member of the Alameda Corridor Transportation Authority, Compton will participate in the selection of the corridor design. Primary options include: 1) a four-lane road with parallel, multi-track rail lines; 2) a six-lane, one-way road couplet with at-grade rail tracks between the one-way routes; and 3) the six-lane road couplet separated by a depressed rail way. Grade separations are contemplated at principal east-west streets. Compton will encourage grade separations at several locations in the City, as described below.

Grade Separations: Construction of new rail and surface street grade separations involves tremendous costs. However, traffic congestion can be greatly mitigated by removing hindrances to free east-west traffic flow. Thus, the City strongly supports efforts to consolidate freight rail traffic along a single corridor and to provide grade separations in the design of the Alameda Corridor. Priority streets in Compton for grade separation include Compton Boulevard, Alondra Boulevard, and Greenleaf Boulevard.

Compton will work to include these streets in the design of the Alameda Corridor. In the event the Alameda Corridor is not built or construction is significantly delayed, Compton will seek other funding sources and establish accelerated time schedules for construction of grade separations.

---

[1]Project Memorandum, "The Alameda Corridor Project," Alameda Corridor Transportation Authority.

The City will continue construction efforts to complete the Mealy Street rail line relocation, which involves completion of the Rosecrans Avenue overpass at Alameda Street and depression of West Alameda Street below the relocated Wilmington Branch rail line, among other improvements.

Traffic Signal Synchronization: The City will complete its program to computerize traffic signals Citywide so that traffic flow can be synchronized and better managed. Complete synchronization will be accomplished by 1995.

ROADWAY MAINTENANCE AND REHABILITATION

Potholed streets, crumbling curbs, and cracked sidewalks citywide contribute to traffic safety problems and a general unkempt appearance. By implementing stronger roadway rehabilitation and maintenance programs, the City will achieve two important goals -- reducing congestion and enhancing the visual character of Compton.

Additional funds for infrastructure improvements will be available from State gas tax revenues increased via legislation passed in 1990. The legislation ties a jurisdiction's eligibility for funds to that jurisdiction's compliance with adopted Congestion Management Plans. Compton will comply with the provisions of the Los Angeles County CMP, as discussed in this element, to ensure the City receives its share of the revenues. A Capital Improvement Plan (CIP) will be submitted to the LACTC as required.

The City will place priority on rehabilitating residential streets within target neighborhoods, as discussed in the Housing Element, toward the end of improving overall neighborhood quality. General Fund, Community Development Block Grant (CDBG), and tax increment resources will be used for this program. Tax increment and CMP funds will be the primary resources used to finance roadway improvements within the commercial and industrial districts.

As growth throughout Southern California adds vehicles to the region's overburdened freeway and arterial highway systems, people will rely more heavily upon public transportation, especially for commute trips. Compton's ready access to RTD and other bus lines and to the Blue Line passenger rail will continue to offer Compton residents and persons working in the City alternatives to the private automobile.

Bus Service

To encourage use of public transit, the City will pursue several programs. Foremost, City officials will work with the RTD to monitor bus transit demands and service levels, and to adjust schedules and routes to best serve residents and commuters into the City. Figure C-3 illustrates preferred bus routes. Bus stops will be clearly identified with signs and benches or bus shelters. The City will cooperate with the RTD in funding these necessities.

In reviewing new development proposals, the City will consider the need for bus turnouts for projects abutting Major and Secondary Highways and Collector streets. If such improvements are necessary, the City will rely largely upon developer financing of the improvements.

Passenger Rail

To maximize use of passenger rail, Compton's multi-modal transit center at the Blue Line station will be expanded to accommodate shuttle bus and vanpool service to and from major employment centers. The center may have designated parking and loading areas for shuttle vehicles. Figure C-3 shows potential destination for shuttle services.

The City will support RTD's and other bus service providers' use of the transit center by providing adequate park-and-ride lots. The City, together with RTD, will monitor uses of the lots and will expand lots as necessary to support increased

1.0 Introduction

1.1 Purpose of Analysis and Study Objectives

This noise assessment was prepared to evaluate the potential noise impacts for the project study area and to recommend noise mitigation measures, if necessary, to minimize the potential noise impacts. The assessment was conducted and compared to the noise standards set-forth by the Federal, State and Local agencies. Consistent with the City's Noise Guidelines, the project must demonstrate compliance to the applicable noise criterion as outlined within the City's Noise Element and Municipal Code.

The following is provided in this report:

- A description of the study area and the proposed project
- Information regarding the fundamentals of noise
- A description of the local noise guidelines and standards
- An analysis of traffic noise impacts to and from the project site
- An analysis of construction noise impacts

1.2 Site Location and Study Area

The project site is located at 930 W. Compton Boulevard in Compton, California, as shown in Exhibit A. The site is currently zoned as Limited Commercial (CL) and Parking (P) and classified as Medium Density Residential (8.1-17.0 dwelling units per acre) in the City of Compton General Plan. The project includes a Change of Zone to General Commercial – Limited Commercial and Planned Development (C-L-D). The proposed use is single-family residential at approximately 24.5 dwelling units per acre. Land uses surrounding the site include single-family residential uses to the south (across 151st Street), single-family residential uses and commercial uses to the west (across Dwight Avenue), mixed-use commercial and residential uses to the north (across Compton Boulevard), and multi-family residential uses to the east (across Kemp Avenue).

1.3 Proposed Project Description

The Project proposes sixty (60) two story single-family buildings on an approximately 2.45-acres. As a worst-case scenario, this assessment assumes the project is built in one (1) complete phase. The site plan used for this project, provided by City Ventures, is shown in Exhibit B.

This study assesses the traffic noise to and from the project site and compares the results to the applicable City noise standards. In addition, the study reviews noise generated by construction activities.

Construction activities within the Project area will consist of on-site grading, building, paving, and architectural coating.

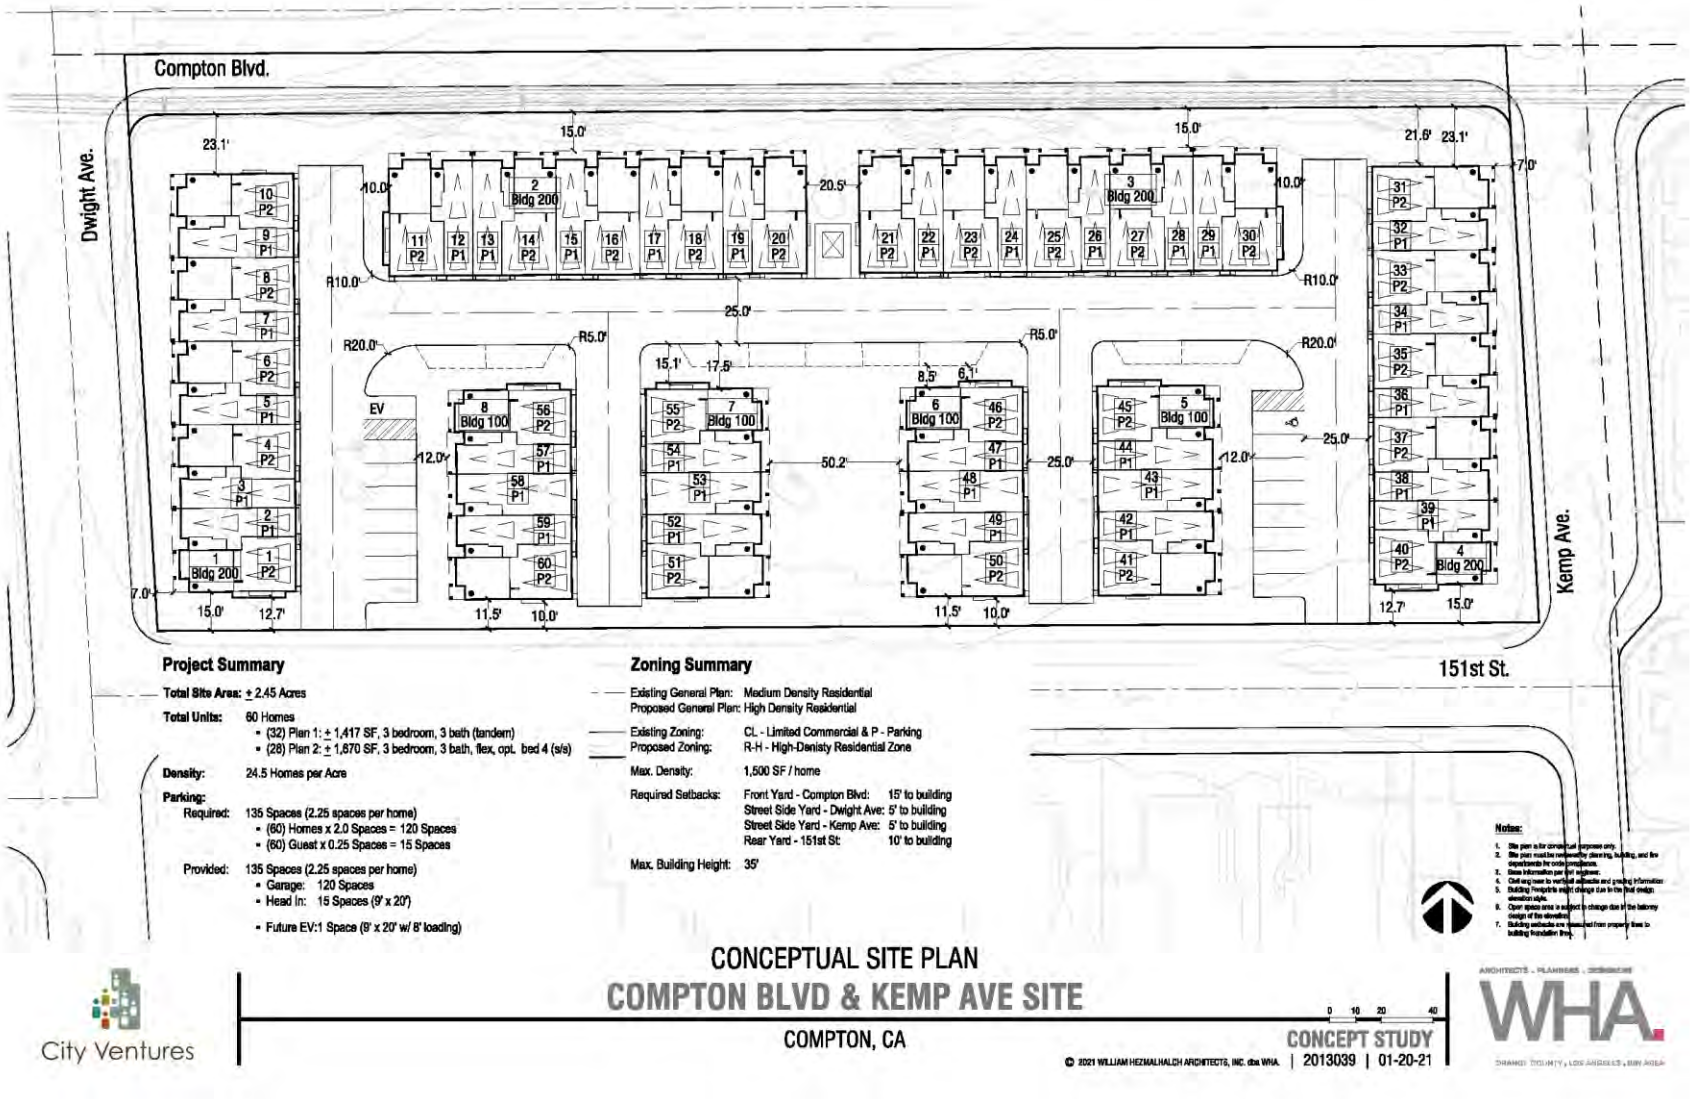
Location Map

Exhibit B

Site Plan



2.0 Fundamentals of Noise

This section of the report provides basic information about noise and presents some of the terms used within the report.

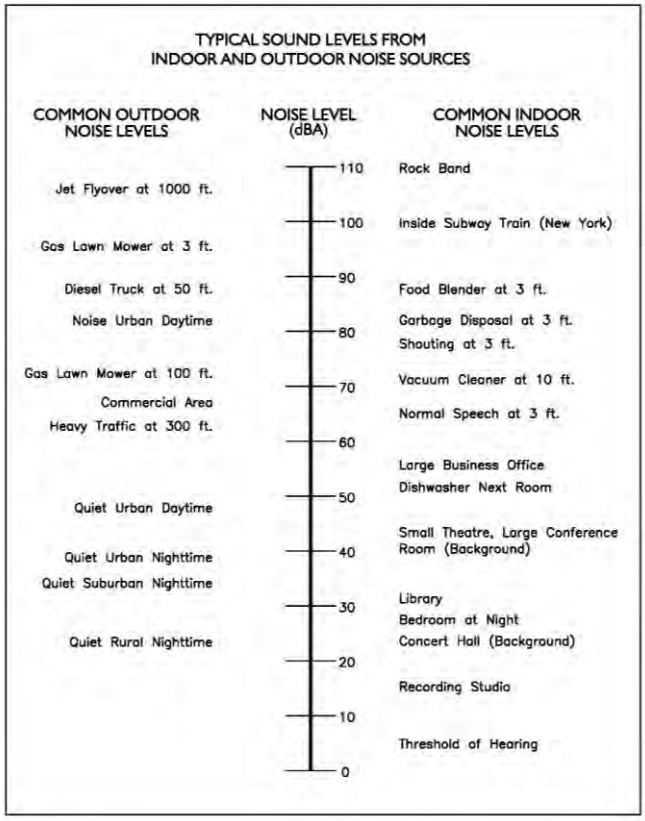
2.1 Sound, Noise and Acoustics

Sound is a disturbance created by a moving or vibrating source and is capable of being detected by the hearing organs. Sound may be thought of as mechanical energy of a moving object transmitted by pressure waves through a medium to a human ear. For traffic, or stationary noise, the medium of concern is air. *Noise* is defined as sound that is loud, unpleasant, unexpected, or unwanted.

2.2 Frequency and Hertz

A continuous sound is described by its *frequency* (pitch) and its *amplitude* (loudness). Frequency relates to the number of pressure oscillations per second. Low-frequency sounds are low in pitch (bass sounding) and high-frequency sounds are high in pitch (squeak). These oscillations per second (cycles) are commonly referred to as Hertz (Hz). The human ear can hear from the bass pitch starting out at 20 Hz all the way to the high pitch of 20,000 Hz.

Exhibit C: Typical A-Weighted Noise Levels



2.3 Sound Pressure Levels and Decibels

The *amplitude* of a sound determines it loudness. The loudness of sound increases or decreases as the amplitude increases or decreases. Sound pressure amplitude is measure in units of micro-Newton per square inch meter (N/m2), also called micro-Pascal (µPa). One µPa is approximately one hundred billionths (0.00000000001) of normal atmospheric pressure. Sound pressure level (SPL or L_p) is used to describe in logarithmic units the ratio of actual sound pressures to a reference pressure squared. These units are called decibels abbreviated dB. Exhibit C illustrates references sound levels for different noise sources.

2.4 Addition of Decibels

Because decibels are on a logarithmic scale, sound pressure levels cannot be added or subtracted by simple plus or minus addition. When two sounds or equal SPL are combined, they will produce an SPL 3 dB greater than the original single SPL. In other words, sound energy must be doubled to produce a 3 dB increase. If two sounds differ by approximately 10 dB, the higher sound level is the predominant sound.

2.5 Human Response to Changes in Noise Levels

In general, the healthy human ear is most sensitive to sounds between 1,000 Hz and 5,000 Hz, (A-weighted scale) and it perceives a sound within that range as being more intense than a sound with a higher or lower frequency with the same magnitude. For purposes of this report as well as with most environmental documents, the A-scale weighting is typically reported in terms of A-weighted decibel (dBA). Typically, the human ear can barely perceive the change in noise level of 3 dB. A change in 5 dB is readily perceptible, and a change in 10 dB is perceived as being twice or half as loud. As previously discussed, a doubling of sound energy results in a 3 dB increase in sound, which means that a doubling of sound energy (e.g. doubling the volume of traffic on a highway) would result in a barely perceptible change in sound level.

Changes in Intensity Level, dBA	Changes in Apparent Loudness
1	Not perceptible
3	Just perceptible
5	Clearly noticeable
10	Twice (or half) as loud

https://www.fhwa.dot.gov/environMent/noise/regulations_and_guidance/polguide/polguide02.cfm

2.6 Noise Descriptors

Noise in our daily environment fluctuates over time. Some noise levels occur in regular patterns, others are random. Some noise levels are constant while others are sporadic. Noise descriptors were created to describe the different time-varying noise levels.

A-Weighted Sound Level: The sound pressure level in decibels as measured on a sound level meter using the A-weighted filter network. The A-weighting filter de-emphasizes the very low and very high frequency components of the sound in a manner similar to the response of the human ear. A numerical method of rating human judgment of loudness.

Ambient Noise Level: The composite of noise from all sources, near and far. In this context, the ambient noise level constitutes the normal or existing level of environmental noise at a given location.

Community Noise Equivalent Level (CNEL): The average equivalent A-weighted sound level during a 24-hour day, obtained after addition of five (5) decibels to sound levels in the evening from 7:00 to 10:00 PM and after addition of ten (10) decibels to sound levels in the night before 7:00 AM and after 10:00 PM.

Decibel (dB): A unit for measuring the amplitude of a sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure, which is 20 micro-pascals.

dB(A): A-weighted sound level (see definition above).

Equivalent Sound Level (LEQ): The sound level corresponding to a steady noise level over a given sample period with the same amount of acoustic energy as the actual time varying noise level. The energy average noise level during the sample period.

Habitable Room: Any room meeting the requirements of the Uniform Building Code or other applicable regulations which is intended to be used for sleeping, living, cooking or dining purposes, excluding such enclosed spaces as closets, pantries, bath or toilet rooms, service rooms, connecting corridors, laundries, unfinished attics, foyers, storage spaces, cellars, utility rooms and similar spaces.

L(n): The A-weighted sound level exceeded during a certain percentage of the sample time. For example, L10 in the sound level exceeded 10 percent of the sample time. Similarly L50, L90 and L99, etc.

Noise: *A*ny unwanted sound or sound which is undesirable because it interferes with speech and hearing, or is intense enough to damage hearing, or is otherwise annoying. The State Noise Control Act defines noise as "...excessive undesirable sound...".

Outdoor Living Area: Outdoor spaces that are associated with residential land uses typically used for passive recreational activities or other noise-sensitive uses. Such spaces include patio areas, barbecue areas, jacuzzi areas, etc. associated with residential uses; outdoor patient recovery or resting areas associated with hospitals, convalescent hospitals, or rest homes; outdoor areas associated with places of worship which have a significant role in services or other noise-sensitive activities; and outdoor school facilities routinely used for educational purposes which may be adversely impacted by noise. Outdoor areas usually not included in this definition are: front yard areas, driveways, greenbelts, maintenance areas and storage areas associated with residential land uses; exterior areas at hospitals that are not used for patient activities; outdoor areas associated with places of worship and principally used for short-term social gatherings; and, outdoor areas associated with school facilities that are not typically associated with educational uses prone to adverse noise impacts (for example, school play yard areas).

Percent Noise Levels: See L(n).

Sound Level (Noise Level): The weighted sound pressure level obtained by use of a sound level meter having a standard frequency-filter for attenuating part of the sound spectrum.

Sound Level Meter: An instrument, including a microphone, an amplifier, an output meter, and frequency weighting networks for the measurement and determination of noise and sound levels.

Single Event Noise Exposure Level (SENEL): The dB(A) level which, if it lasted for one second, would produce the same A-weighted sound energy as the actual event.

2.7 Traffic Noise Prediction

Noise levels associated with traffic depends on a variety of factors: (1) volume of traffic, (2) speed of traffic, (3) auto, medium truck (2–3 axle) and heavy truck percentage (4 axle and greater), and sound propagation. The greater the volume of traffic, higher speeds and truck percentages equate to a louder volume in noise. A doubling of the Average Daily Traffic (ADT) along a roadway will increase noise levels by approximately 3 dB; reasons for this are discussed in the sections above.

2.8 Sound Propagation

As sound propagates from a source it spreads geometrically. Sound from a small, localized source (i.e., a point source) radiates uniformly outward as it travels away from the source in a spherical pattern. The sound level attenuates at a rate of 6 dB per doubling of distance. The movement of vehicles down a roadway makes the source of the sound appear to propagate from a line (i.e., line source) rather than a point source. This line source results in the noise propagating from a roadway in a cylindrical spreading versus a spherical spreading that results from a point source. The sound level attenuates for a line source at a rate of 3 dB per doubling of distance.

As noise propagates from the source, it is affected by the ground and atmosphere. Noise models use hard site (reflective surfaces) and soft site (absorptive surfaces) to help calculate predicted noise levels. Hard site conditions assume no excessive ground absorption between the noise source and the receiver. Soft site conditions such as grass, soft dirt or landscaping attenuate noise at a rate of 1.5 dB per doubling of distance. When added to the geometric spreading, the excess ground attenuation results in an overall noise attenuation of 4.5 dB per doubling of distance for a line source and 7.5 dB per doubling of distance for a point source.

Research has demonstrated that atmospheric conditions can have a significant effect on noise levels when noise receivers are located 200 feet from a noise source. Wind, temperature, air humidity and turbulence can further impact have far sound can travel.

3.0 Ground-Bourne Vibration Fundamentals

3.1 Vibration Descriptors

Ground-borne vibrations consist of rapidly fluctuating motions within the ground that have an average motion of zero. The effects of ground-borne vibrations typically only cause a nuisance to people, but at extreme vibration levels, damage to buildings may occur. Although ground-borne vibration can be felt outdoors, it is typically only an annoyance to people indoors where the associated effects of the shaking of a building can be notable. Ground-borne noise is an effect of ground-borne vibration and only exists indoors, since it is produced from noise radiated from the motion of the walls and floors of a room and may also consist of the rattling of windows or dishes on shelves.

Several different methods are used to quantify vibration amplitude.

PPV – Known as the peak particle velocity (PPV) which is the maximum instantaneous peak in vibration velocity, typically given in inches per second.

RMS – Known as root mean squared (RMS) can be used to denote vibration amplitude

VdB – A commonly used abbreviation to describe the vibration level (VdB) for a vibration source.

3.2 Vibration Perception

Typically, developed areas are continuously affected by vibration velocities of 50 VdB or lower. These continuous vibrations are not noticeable to humans whose threshold of perception is around 65 VdB. Outdoor sources that may produce perceptible vibrations are usually caused by construction equipment, steel-wheeled trains, and traffic on rough roads, while smooth roads rarely produce perceptible ground-borne noise or vibration. To counter the effects of ground-borne vibration, the Federal Transit Administration (FTA) has published guidance relative to vibration impacts. According to the FTA, fragile buildings can be exposed to ground-borne vibration levels of 0.3 inches per second without experiencing structural damage.

There are three main types of vibration propagation: surface, compression, and shear waves. Surface waves, or Rayleigh waves, travel along the ground's surface. These waves carry most of their energy along an expanding circular wave front, similar to ripples produced by throwing a rock into a pool of water. P-waves, or compression waves, are body waves that carry their energy along an expanding spherical wave front. The particle motion in these waves is longitudinal (i.e., in a "push-pull" fashion). P-waves are analogous to airborne sound waves. S-waves, or shear waves, are also body waves that carry energy along an expanding spherical wave front. However, unlike P-waves, the particle motion is transverse, or side-to-side and perpendicular to the direction of propagation.

As vibration waves propagate from a source, the vibration energy decreases in a logarithmic nature and the vibration levels typically decrease by 6 VdB per doubling of the distance from the vibration source. As stated above, this drop-off rate can vary greatly depending on the soil but has been shown to be

effective enough for screening purposes, in order to identify potential vibration impacts that may need to be studied through actual field tests.

4.0 Regulatory Setting

The proposed project is located in the City of Compton and noise regulations are addressed through the efforts of various federal, state and local government agencies. The agencies responsible for regulating noise are discussed below.

4.1 Federal Regulations

The adverse impact of noise was officially recognized by the federal government in the Noise Control Act of 1972, which serves three purposes:

- Publicize noise emission standards for interstate commerce
- Assist state and local abatement efforts
- Promote noise education and research

The Federal Office of Noise Abatement and Control (ONAC) originally was tasked with implementing the Noise Control Act. However, it was eventually eliminated leaving other federal agencies and committees to develop noise policies and programs. Some examples of these agencies are as follows: The Department of Transportation (DOT) assumed a significant role in noise control through its various agencies. The Federal Aviation Agency (FAA) is responsible to regulate noise from aircraft and airports. The Federal Highway Administration (FHWA) is responsible to regulate noise from the interstate highway system. The Occupational Safety and Health Administration (OSHA) is responsible for the prohibition of excessive noise exposure to workers.

The federal government advocates that local jurisdiction use their land use regulatory authority to arrange new development in such a way that “noise sensitive” uses are either prohibited from being constructed adjacent to a highway or, or alternatively that the developments are planned and constructed in such a manner that potential noise impacts are minimized.

Since the federal government has preempted the setting of standards for noise levels that can be emitted by the transportation source, the City is restricted to regulating the noise generated by the transportation system through nuisance abatement ordinances and land use planning.

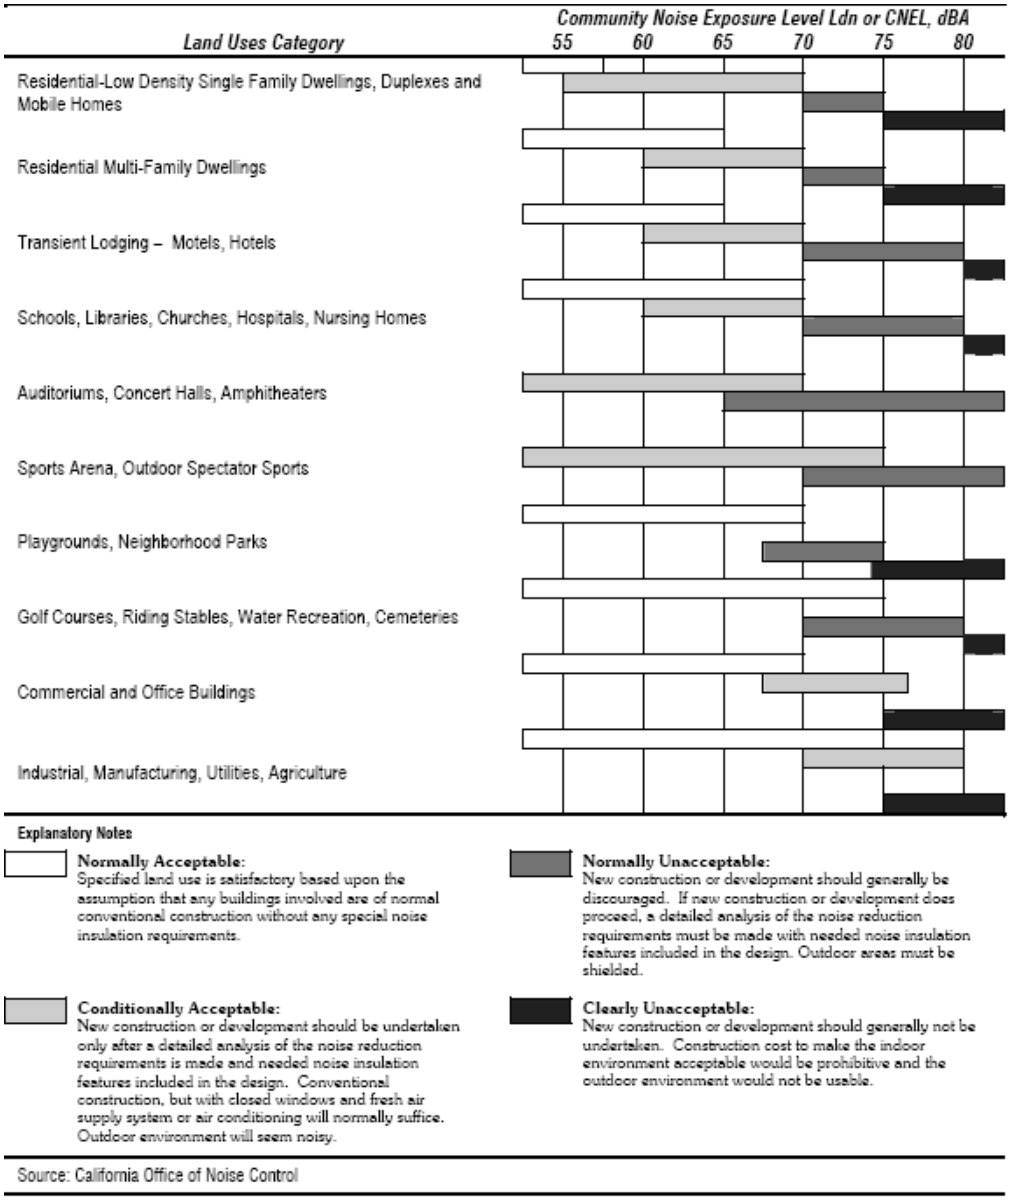
4.2 State Regulations

Established in 1973, the California Department of Health Services Office of Noise Control (ONC) was instrumental in developing regularity tools to control and abate noise for use by local agencies. One significant model is the “Land Use Compatibility for Community Noise Environments Matrix.” The matrix allows the local jurisdiction to clearly delineate compatibility of sensitive uses with various incremental levels of noise.

The State of California has established noise insulation standards as outlined in Title 24 and the Uniform Building Code (UBC) which in some cases requires acoustical analyses to outline exterior noise levels and to ensure interior noise levels do not exceed the interior threshold. The State mandates that the legislative body of each county and city adopt a noise element as part of its comprehensive general plan.

The local noise element must recognize the land use compatibility guidelines published by the State Department of Health Services. The guidelines rank noise land use compatibility in terms of normally acceptable, conditionally acceptable, normally unacceptable, and clearly unacceptable as illustrated in Exhibit D.

Exhibit D: Land Use Compatibility Guidelines



4.3 City of Compton Noise Regulations

The City of Compton outlines their noise regulations and standards within the Noise Element from the General Plan and the Noise Ordinance from the Municipal Code.

City of Compton General Plan

Applicable policies and standards governing environmental noise in the City are set forth in the General Plan Noise Element. Table N-2 of the Compton Noise Element outlines the interior and exterior noise standards for community noise environments. According to Table N-2 multifamily residential noise limits are 45 dBA CNEL interior and 65 dBA CNEL exterior. It should be noted that if exterior levels exceed this limit, the architectural design should be such that interior noise levels are not greater than 45 dBA. The project will be compared to these noise limits.

In addition to the noise standards, the City has outlined goals, policies and implementation measures to reduce potential noise impacts and are presented below:

Goals, Policies, and Implementation Measures

Policies, goals and implementation program measures from the Noise Element that would mitigate potential impacts on noise include the following.

Goal 1.0: Reduce noise impacts from transportation noise sources.

Policy 1.1 (L): Construction of barriers along freeways, railroads, and Alameda Corridor when necessary to shield noise-sensitive uses from excessive noise.

Policy 1.2 (L): Include noise mitigation measures in the design of new roadway projects in Compton.

Policy 1.3 (L): Reduce transportation noise through proper design and coordination of new or remodeled transportation and circulation facilities.

Policy 1.4 (L): Enforce City, State, and Federal noise standards, especially those for mufflers and modified exhaust systems.

Policy 1.5 (S): Monitor noise from buses and other heavy vehicles in residential areas. If necessary, consider alternative circulation routes for those types of vehicles.

Policy 1.6 (M): Discourage through-traffic in residential neighborhoods by use of speed bumps.

Policy 1.7 (L): Require that new transportation equipment purchased by the City of Compton comply with noise performance standards.

Policy 1.8 (S): Ensure that noise mitigation considerations are incorporated into the design of the Alameda Corridor.

Policy 1.9 (S): Encourage the SCRTD to implement measures to reduce impact of Blue Line horn.

Policy 1.10 (L): Encourage Compton Airport to implement noise reduction methods for aircraft, especially at landing and take-off.

Goal 2.0: Incorporate noise considerations into land use planning decisions.

Policy 2.1 (S): Establish acceptable limits of noise for various land uses throughout the community, in accordance with Table N-2.

Policy 2.2 (L): Ensure acceptable noise levels near schools, hospitals, convalescent homes, and other noise sensitive areas, in accordance with Table N-1.

Policy 2.3 (S): Establish standards for all types of noise not already governed by local ordinances or preempted by state or federal law.

Policy 2.4 (L): Require noise reduction techniques in site and architectural design and construction where noise reduction is necessary.

Policy 2.5 (L): Discourage and, if necessary, prohibit location of noise-sensitive land uses in noisy environments, including near railroad tracks, freeways, and Compton Airport.

Goal 3.0: Minimize noise spillover from commercial and industrial uses into nearby residential neighborhoods.

Policy 3.1 (L): Enforce the 65 db(A) State standard for exterior noise levels for all commercial uses.

Policy 3.2 (S): Require that a minimum 15-foot, landscaped buffer be provided between a commercial or mixed-use structure and an adjoining residential parcel.

Policy 3.3 (S): Require that automobile and truck access to commercial or industrial properties located adjacent to residential parcels be located at the maximum practical distance from residential parcel.

Policy 3.4 (L): Prohibit truck deliveries to commercial and industrial properties abutting residential uses before 7 a.m. and after 9 p.m., unless there is no feasible alternative.

Goal 4.0: Minimize the noise impacts associated with the development of residential units above ground floor commercial uses in mixed-use developments.

Policy 4.1 (S): Require that commercial uses development as part of a mixed-use project (with residential uses) not be noise intensive.

Policy 4.2 (S): Require that mixed-use structures be designed to prevent transfer of noise and vibration from the commercial to the residential use.

Policy 4.3 (L): Orient mixed-use residential units away from major noise sources.

Policy 4.4 (L): Locate balconies and openable windows of residential units in mixed-use projects away from the primary street and other major noise sources.

Goal 5.0: Develop measures to control non-transportation noise impact.

Policy 5.1 (S): Adopt and updated comprehensive City Noise Ordinance to control excessive noise from lawn blowers, trimmers, machinery, or other disturbances.

Policy 5.2 (L): Reduce noise generated by construction activities by requiring sound attenuation devices on construction equipment.

Policy 5.3 (L): Establish and maintain coordination among the agencies involved in noise abatement.

Construction Noise Regulations

Section 7-12.22 of the City of Compton General Plan regulates construction noise. The General Plan states, No person shall cause or permit any work to be done or do any work on the erection (including excavation), unless the noise caused thereby is confined within a building, or use any pile driver, steam shovel, pneumatic hammer, derrick, steam or electric hoist, unless the noise caused thereby is confined within a building, other than between the hours of 7:00 AM and 7:00 PM on Monday through Sunday, except in cases of urgent necessity in the interest of public health and safety and then only with a permit from the building official. No such permit shall be granted for a period of more than three (3) days but may be renewed from time to time so long as the emergency exists.

5.0 Study Method and Procedure

The following section describes the noise modeling procedures and assumptions used for this assessment.

5.1 Noise Measurement Procedure and Criteria

Noise measurements are taken to determine the existing noise levels. A noise receiver or receptor is any location in the noise analysis in which noise might produce an impact. The following criteria are used to select measurement locations and receptors:

- Locations expected to receive the highest noise impacts, such as first row of houses
- Locations that are acoustically representative and equivalent of the area of concern
- Human land usage
- Sites clear of major obstruction and contamination

MD conducted the sound level measurements in accordance to the City of Compton which is similar to CalTrans technical noise specifications. All measurements equipment meets American National Standards Institute (ANSI) specifications for sound level meters (S1.4-1983 identified in Chapter 19.68.020.AA). The following gives a brief description of the Caltrans Technical Noise Supplement procedures for sound level measurements:

- Microphones for sound level meters were placed 5-feet above the ground for all measurements
- Sound level meters were calibrated (Larson Davis CAL 200) before and after each measurement
- Following the calibration of equipment, a wind screen was placed over the microphone
- Frequency weighting was set on “A” and slow response
- Results of the long-term noise measurements were recorded on field data sheets
- During any short-term noise measurements any noise contaminations such as barking dogs, local traffic, lawn mowers, or aircraft fly-overs were noted
- Temperature and sky conditions were observed and documented

5.2 Noise Measurement Locations

Noise monitoring locations were selected based on the distance from Compton Blvd to the nearest sensitive on-site receptors. Short-term noise measurements were conducted near the corner portions of the project site and are illustrated in Exhibit E. Appendix A includes photos, field sheet, and measured noise data. Exhibit E illustrates the location of the measurements.

5.3 FHWA Traffic Noise Prediction Model/SoundPlan

Traffic noise from vehicular traffic was projected using a computer program that replicates the FHWA Traffic Noise Prediction Model (FHWA-RD-77-108). The FHWA model arrives at the predicted noise level through a series of adjustments to the Reference Energy Mean Emission Level (REMEL). Roadway volumes and percentages correspond to the project’s traffic impact study as prepared by TJW Engineering (TJW Engineering, TNC-18-01 – MHSR Apartments Traffic Impact Assessment, Jan 2019) and

roadway classification. The referenced traffic data was applied to the model and is in Appendix B. The following outlines the key adjustments made to the REMEL for the roadway inputs:

- Roadway classification – (e.g. freeway, major arterial, arterial, secondary, collector, etc),
- Roadway Active Width – (distance between the center of the outer most travel lanes on each side of the roadway)
- Average Daily Traffic Volumes (ADT), Travel Speeds, Percentages of automobiles, medium trucks and heavy trucks
- Roadway grade and angle of view
- Site Conditions (e.g. soft vs. hard)
- Percentage of total ADT which flows each hour through-out a 24-hour period

Table 1 indicates the roadway parameters and vehicle distribution utilized for this study.

Table 1: Roadway Parameters and Vehicle Distribution

Roadway	Segment	LOS D ADT[1]	LOS D + Project ADT[1]	Speed (MPH)	Site Conditions
Compton Blvd	Secondary Highway	25,357	25,796	35	Soft
Compton Blvd Vehicle Distribution and Mix[2]					
Motor-Vehicle Type		**Daytime % (7AM to 7 PM)**	**Evening % (7 PM to 10 PM)**	**Night % (10 PM to 7 AM)**	**Total % of Traffic Flow**
Automobiles		77.5	12.9	9.6	97.42
Medium Trucks		84.8	4.9	10.3	1.54
Heavy Trucks		86.5	2.7	10.8	0.74

Notes:
[1] Existing ADT and Existing + Project volumes for Compton Blvd are from the City of Compton's Circulation element
[2] Vehicle distribution data is based on typical Southern California roadway vehicle percentages for Secondary Arterials.

To determine the project's noise impact to the surrounding land uses, MD generated noise contours for LOS D, and LOS D + project conditions. Noise contours are used to provide a characterization of sound levels experienced at a set distance from the centerline of a subject roadway. They are intended to represent a worst-case scenario and do not take into account structures, sound walls, topography, and/or other sound attenuating features which may further reduce the actual noise level. Noise contours are developed for comparative purposes and are used to demonstrate potential increases/decreases along subject roadways as a result of a project.

In addition, this assessment calculates future traffic noise levels at the project site associated with Compton Boulevard. For the purpose of this evaluation MD used the existing + project to represent the future noise level to the first row of residential units with direct line of sight to Compton Blvd. The traffic noise calculation worksheet outputs are located in Appendix B.

5.4 Interior Noise Modeling

The interior noise level is the difference between the projected exterior noise level at the structure's facade and the noise reduction provided by the structure itself. Typical building construction will provide a conservative 12 dBA noise level reduction with a "windows open" condition and a very conservative 20 dBA noise level reduction with "windows closed". MD estimated the interior noise level by subtracting the building shell design from the predicted exterior noise level.

With the "windows closed" the project will require mechanical fresh air ventilation (e.g. air conditioning) to the habitable dwelling units.

5.5 FHWA Roadway Construction Noise Model

The construction noise analysis utilizes the Federal Highway Administration (FHWA) Roadway Construction Noise Model (RNCM), together with several key construction parameters. Key inputs include distance to the sensitive receiver, equipment usage, % usage factor, and baseline parameters for the project site.

The project was analyzed based on the different construction phases. Construction noise is expected to be loudest during the grading, concrete and building phases of construction. The construction noise calculation output worksheet is located in Appendix C. The following assumptions relevant to short-term construction noise impacts were used:

- It is estimated that construction will occur over a year to year and a half time period. Construction noise is expected to be the loudest during the grading, concrete, and building phases.

Exhibit E
Measurement Location

X = Measurement location

= boundary

6.0 Existing Noise Environment

Four (4) short term ambient noise measurement was conducted at the project site. The measurements measured the 1-hour Leq, Lmin, Lmax and other statistical data (e.g. L2, L8). The noise measurement was taken to determine the existing baseline noise conditions.

6.1 Short-Term Noise Measurement Results

The results of the Short-term noise data are presented in Table 2.

Table 2: Short-Term Nosie Measurement Data (dBA)[1]

Location	Date	Start Time	Leq	Lmax	Lmin	L(2)	L(8)	L(25)	L(50)
Site 1	5/14/2019	10:42 AM	69.6	85.8	45.2	44.9	46.9	54.5	53.9
Site 2	5/14/2019	11:08 AM	73.3	92.3	48.0	55.3	59.0	61.4	65.8
Site 3	5/14/2019	11:16 AM	49.7	91.2	37.4	46.8	47.1	52.4	55.4
Site 4	5/14/2019	11:23 AM	54.1	94.8	41.9	44.9	46.9	54.5	53.9

Notes:
1. Measurements were taken over a ten-minute interval. Measurement locations are indicated in Exhibit E.

Short-term noise data indicates the ambient noise levels range between 54.1 to 73.3 dBA Leq. The measured noise levels and field notes indicate that traffic noise is the main source of noise impacting the project site.

7.0 Future Noise Environment Impacts and Mitigation

This assessment analyzes future noise impacts to the project and compares the results to the City's Noise Standards. The analysis details the estimated exterior noise levels associated with traffic from adjacent roadway sources.

7.1 Future Exterior Noise

The following outlines the exterior noise levels associated with the proposed project.

7.1.1 Off-site Traffic Noise Impact

The potential off-site noise impacts caused by the increase in vehicular traffic as a result of the project were calculated at a distance of 50 feet. The distance to the 55, 60, 65, and 70 dBA CNEL noise contours are also provided for reference. The noise level at 50 feet is representative of approximate distances to existing homes along the subject roadway. The noise contours were calculated for the following scenarios and conditions:

- LOS D Condition: This scenario refers to the existing year traffic noise condition and is demonstrated in Table 3.

- LOS D + Project Condition: This scenario refers to the existing year plus project traffic noise condition and is demonstrated in Table 3.

LOS D/LOS D + Project Scenario Comparison

Table 3 provides the LOS D and LOS D + Project noise conditions and shows the change in noise level as a result of the proposed project. As shown in Table 3, the increase in traffic noise for the Existing and Existing + Project scenario would have a nominal increase of 0.1 dBA at 50 feet from the centerline of the subject roadway.

Table 3: LOS D Scenario – Noise Levels Along Roadways (dBA CNEL)

LOS D Without Project Exterior Noise Levels

Roadway	Segment	CNEL at 50 Ft (dBA)	Distance to Contour (Ft)			
			70 dBA CNEL	65 dBA CNEL	60 dBA CNEL	55 dBA CNEL
Compton Blvd	Wilmington Ave to S Central Ave	68	36	78	169	363

Change in LOS D + Project Exterior Noise Levels

Roadway	Segment	CNEL at 50 Ft (dBA)	Distance to Contour (Ft)			
			70 dBA CNEL	65 dBA CNEL	60 dBA CNEL	55 dBA CNEL
Compton Blvd	Wilmington Ave to S Central Ave	68	37	79	171	367

Change in LOS D Noise Levels as a Result of Projects

Roadway[1]	Segment	CNEL at 50 Feet dBA[2]			
		Existing Without Project	Existing With Project	Change in Noise Level	Potential Significant Impact
Compton Blvd	Wilmington Ave to S Central Ave	68	68.0	0.1	No

Notes:
[1] Exterior noise levels calculated at 5 feet above ground level.
[2] Noise levels calculated from centerline of subject roadway.

7.1.2 On-Site Traffic Noise Impact

Traffic noise from the local roadway network was evaluated and compared to the City's Exterior Noise Standard. Per the City's Exterior Noise Standard (Table N-2 from the City's General Plan, Noise Element), multi-family residential noise limit is 65 dBA CNEL. As shown in Table 3, Existing Plus Project traffic 65 dBA CNEL noise projections from Compton Blvd will reach up to 79 feet from the centerline of the road. Residential structures are located approximately 50 feet away from the centerline of Compton Blvd and have a projected noise level of 68 dBA. It should be noted that the existing noise level exceeds the 65 dBA noise limit so 68 dBA becomes the standard.

7.2 Interior Noise Levels

The future interior noise level was calculated for the sensitive receptor locations using a typical "windows open" and "windows closed" condition. A "windows open" condition assumes 12 dBA of noise attenuation from the exterior noise level. A "windows closed" condition" assumes 20 dBA of noise attenuation from the exterior noise level. Table 4 indicates the first and second floor interior noise levels for the project site.

Table 4: Future Interior Noise Levels (dBA CNEL)

Location	Roadway Noise Source	Exterior Facade Study Location	Noise Level at Building Facade1	Interior Noise Reduction Required to Meet Interior Noise Standard of 45 dBA CNEL	Interior Noise Level w/ Typical Residential Windows (STC≥ 25)		STC Rating for Windows Facing Subject Roadway4
					Window Open2	Windows Closed3	
1st Row Units Along Northern Property Line	Compton Blvd	1st Floor	68	23	56	48	26
		2nd Floor	68	23	56	48	26

Notes:
1. Noise level from Table 5 and from worksheets Appendix C.
2. A minimum of 12 dBA noise reduction is assumed with a "windows open" condition.
3. A minimum of 20 dBA noise reduction is assumed with a "windows closed" condition.
4. Indicates the required STC rating to meet the interior noise standard.

As shown in Table 4, the interior noise level will range from 56 dBA CNEL with the windows open and 48 dBA CNEL with the windows closed.

To meet the City's interior 45 dBA CNEL standard a "windows closed" condition is required. The windows and sliding glass doors directly facing the Compton Blvd will require a minimum STC rating of 26 for the 1st floor and 2nd floors. A "windows closed" condition simply means that in order to achieve a 45 dBA CNEL interior noise level, the windows must be closed and does not mean the windows must be fixed.

8.0 Construction Noise Impact

The degree of construction noise may vary for different areas of the project site and also vary depending on the construction activities. Noise levels associated with the construction will vary with the different phases of construction. The construction noise and vibration level projections are provided in the sections below.

8.1 Construction Noise

The Environmental Protection Agency (EPA) has compiled data regarding the noise generated characteristics of typical construction activities. The data is presented in Table 5.

Table 5: Typical Construction Noise Levels[1]

Equipment Powered by Internal Combustion Engines

Type	Noise Levels (dBA) at 50 Feet
Earth Moving	
Compactors (Rollers)	73 - 76
Front Loaders	73 - 84
Backhoes	73 - 92
Tractors	75 - 95
Scrapers, Graders	78 - 92
Pavers	85 - 87
Trucks	81 - 94
Materials Handling	
Concrete Mixers	72 - 87
Concrete Pumps	81 - 83
Cranes (Movable)	72 - 86
Cranes (Derrick)	85 - 87
Stationary	
Pumps	68 - 71
Generators	71 - 83
Compressors	75 - 86

Impact Equipment

Type	Noise Levels (dBA) at 50 Feet
Saws	71 - 82
Vibrators	68 - 82

Notes:
[1] Referenced Noise Levels from the Environmental Protection Agency (EPA)

Construction is anticipated to occur during the permissible hours according the City's General Plan. Construction noise is considered a short-term impact and would be considered significant if construction activities are taken outside the allowable times as described in the City's General Plan (Section 7-12.22). Construction noise will have a temporary or periodic increase in the ambient noise level above the existing within the project vicinity. Furthermore, noise reduction measures are provided to further reduce construction noise. The construction noise impact is considered less than significant; however, construction noise level projections are provided.

Typical operating cycles for these types of construction equipment may involve one or two minutes of full power operation followed by three to four minutes at lower power settings. Noise levels will be loudest during grading phase. A likely worst-case construction noise scenario during grading assumes the use of a grader, a dozer, an excavator, and three (3) backhoes operating at 80 feet from the nearest sensitive receptor.

To ensure that construction activities do not disrupt the adjacent land uses, the following noise reduction measures should be taken:

1. Construction shall occur during the hours of 7:00 AM to 8:00 PM.

2. Stationary construction noise sources such as generators or pumps should be located as far as feasibly possible from any existing adjacent residential units, as feasible.

3. Construction staging areas should be located as far as feasibly possible from any adjacent sensitive land uses, as feasible.

4. During construction, the contactor shall ensure all construction equipment is equipped with appropriate noise attenuating devices.

5. Equipment shall be maintained so that vehicles and their loads are secured from rattling and banging.

8.2 Construction Vibration

Construction activities can produce vibration that may be felt by adjacent land uses. The construction of the proposed project would not require the use of equipment such as pile drivers, which are known to generate substantial construction vibration levels. The primary vibration source during construction may be from a bull dozer. A large bull dozer has a vibration impact of 0.089 inches per second peak particle velocity (PPV) at 25 feet which is perceptible but below any risk to architectural damage.

The fundamental equation used to calculate vibration propagation through average soil conditions and distance is as follows:

$$PPV_{equipment} = PPV_{ref} (100/D_{rec})^n$$

Where: PPV_{ref} = reference PPV at 100ft.
D_{rec} = distance from equipment to receiver in ft.
n = 1.1 (the value related to the attenuation rate through ground)

The thresholds from the Caltrans Transportation and Construction Induced Vibration Guidance Manual in Table 6 (below) provides general thresholds and guidelines as to the vibration damage potential from vibratory impacts.

Table 6: Guideline Vibration Damage Potential Threshold Criteria

Structure and Condition	Maximum PPV (in/sec)	
	Transient Sources	Continuous/Frequent Intermittent Sources
Extremely fragile historic buildings, ruins, ancient monuments	0.12	0.08
Fragile buildings	0.2	0.1
Historic and some old buildings	0.5	0.25
Older residential structures	0.5	0.3
New residential structures	1.0	0.5
Modern industrial/commercial buildings	2.0	0.5

Source: Table 19, Transportation and Construction Vibration Guidance Manual, Caltrans, Sept. 2013.
Note: Transient sources create a single isolated vibration event, such as blasting or drop balls. Continuous/frequent intermittent sources include impact pile drivers, pogo-stick compactors, crack-and-seat equipment, vibratory pile drivers, and vibratory compaction equipment.

Table 7 gives approximate vibration levels for particular construction activities. This data provides a reasonable estimate for a wide range of soil conditions.

Table 7: Vibration Source Levels for Construction Equipment[1]

Equipment	Peak Particle Velocity (inches/second) at 25 feet	Approximate Vibration Level LV (dVB) at 25 feet
Pile driver (impact)	1.518 (upper range)	112
	0.644 (typical)	104
Pile driver (sonic)	0.734 upper range	105
	0.170 typical	93
Clam shovel drop (slurry wall)	0.202	94
Hydromill	0.008 in soil	66
(slurry wall)	0.017 in rock	75
Vibratory Roller	0.21	94
Hoe Ram	0.089	87
Large bulldozer	0.089	87
Caisson drill	0.089	87
Loaded trucks	0.076	86
Jackhammer	0.035	79
Small bulldozer	0.003	58

[1] Source: Transit Noise and Vibration Impact Assessment, Federal Transit Administration, May 2006.

At a distance of 80 feet, a large bulldozer would yield a worst-case 0.025 PPV (in/sec) which slightly perceptible but sustainably below any risk of damage (0.5 in/sec PPV is the threshold of residential structures). The impact is less than significant, and no mitigation is required.

8.3 Construction Noise Reduction Measures

Construction operations must follow the City's General Plan and the Noise Ordinance, which states that construction, repair or excavation work performed must occur within the permissible hours. To further

ensure that construction activities do not disrupt the adjacent land uses, the following measures should be taken:

1. Construction should occur during the permissible hours as defined in Section 7-12.22.

2. During construction, the contactor shall ensure all construction equipment is equipped with appropriate noise attenuating devices.

3. The contractor should locate equipment staging areas that will create the greatest distance between construction-related noise/vibration sources and sensitive receptors nearest the project site during all project construction.

4. Idling equipment should be turned off when not in use.

5. Equipment shall be maintained so that vehicles and their loads are secured from rattling and banging.

Project Owner's Certification of the Preliminary Low Impact Development (LID) Plan

Project Name: ***Concord***

Project Number: **Tentative Tract Map No. 82807**
APN 6161-001-902

Project Address: **930 W. Compton Boulevard**
Compton, CA 90220

This Preliminary Low Impact Development (LID) Plan for the ***Concord*** (***TM 82807)*** project has been prepared for City Ventures by C&V Consulting, Inc. It is intended to comply with the requirements of the City of Compton's Conditions of Approval.

The undersigned is authorized to approve implementation of provisions of this plan as appropriate, and will strive to have the plan carried out by successors consistent with the County of Los Angeles LID Manual and the intent of the NPDES storm water requirements.

"I certify under penalty of law that this document and all attachments were prepared under my jurisdiction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathered the information, to the best of my knowledge and belief, the information submitted is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Section 200

A. Contact Information/List of Responsible Parties

The property contact information is:

Kim Prijatel
Tel: (949) 258-7555
City Ventures
3121 Michelson Drive, Suite 150
Irvine, CA 92612

The property owner shall have primary responsibility and significant authority for the implementation, maintenance, and inspection of the property BMPs. Duties of the Owner include but are not limited to:

- Implementing all elements of the LID, including but not limited to:
  - Implementation of prompt and effective erosion and sediment control measures
  - Implementing all non-storm water management, and materials and waste management activities, such as: monitoring, discharges, general site clean-up; vehicle and equipment cleaning, spill control; good construction housekeeping to ensure that no materials other than storm water are discharged which may have an adverse effect on receiving waters or storm drain systems, etc.
- Pre-storm inspections
- Storm event inspections
- Post-storm inspections
- Routine inspections as described in the LID
- Ensuring elimination of all unauthorized discharges
- The Owner shall be assigned authority to mobilize crews in order to make immediate repairs to the control measures.
- Coordinate all of the necessary corrections/repairs are made immediately, and that the project complies with the LID at all times.
- Managing and report any Illicit Connections or Illegal Discharges.

Section 300

A. References

The following documents are made a part of this LID by reference:

- Project plans and specifications for the City of Compton to support the ***Concord (TM 82807)*** project, prepared by C&V Consulting, Inc., 9830 Irvine Center Drive, Irvine, CA 92618.

- County of Los Angeles Department of Public Works, Low Impact Development Standards Manual dated February 2014

- State Water Resources Control Board (SWRCB) National Pollutant Discharge Elimination System (NPDES) General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities, Order No. 2009-0009-DWQ, NPDES No. CAS000002 dated July 1, 2010

- California Stormwater BMP Handbook – Construction, January 2009.

- California Stormwater BMP Handbook – New Development and Redevelopment, January 2003.

- Los Angeles County Municipal Stormwater/ NPDES Permit Order R4-2012-0175

Section 400 – Body of LID

A. Objectives

This Low Impact Development (LID) Plan has four main objectives:

1) Identify all pollutant sources, including sources of sediment that may affect the quality of storm water discharges associated with daily use / activity (storm water discharges) from the property site.
2) Identify non-storm water discharges.
3) Identify, construct, implement and maintain Best Management Practices (BMPs) to reduce or eliminate pollutants in storm water discharges and authorized non-storm water discharges from the property site.
4) Develop a maintenance schedule for BMPs designed to reduce or eliminate pollutants.

B. Project Background and Description

The proposed project is located at 930 W. Compton Boulevard in the City of Compton, California and consists of approximately 2.45 acres. The site is bounded by W. Compton Boulevard to the north, W. 151st Street and existing single-family residential to the south, S. Kemp Avenue and existing single-family residential to the east, and Dwight avenue and a liquor store to the west. The project proposes to construct eight buildings of 60 residential units with private garages, private drive aisles, and guest parking areas. The private drive aisle provides access to the residences via two driveway entrances/exits along W. 151st Street. Drive aisles and parking areas will be composed of asphalt concrete pavement, and landscaping will be incorporated in open-space areas.

The project site is currently vacant with no visible traces of impervious coverage. Thus, pervious coverage is assumed to be 99% for the existing condition of the site per LACPW Hydrology Manual. Proposed condition coverage is assumed to be 86% impervious based on land use per Hydrology Manual.

C. Vicinity Map

The site is located at 930 W. Compton Avenue off of the I-110 freeway in the City of Compton, County of Los Angeles. The site is bounded by W. Compton Boulevard to the north, W. 151st Street and existing single-family residential to the south, S. Kemp Avenue and existing single-family residential to the east, and Dwight avenue and a liquor store to the west.

Refer to Figure 1 for the Vicinity Map.

D. Existing Site Drainage Condition

The existing site is relatively flat with elevations ranging between approximately 81 feet and 85 feet above mean sea level. Generally, the existing site drainage surface flows overland in the northeasterly direction and overflows into the rights-of-way of W. Compton Boulevard and S. Kemp Avenue. Within the public rights-of-way, drainage is captured by existing catch basins within W. Compton Boulevard and S. Kemp Avenue and conveyed to an existing Los Angeles County Flood Control District (LACFCD) 66" Reinforced Concrete storm drain facility within W. Compton Boulevard which outlets to the existing Compton Creek. Compton Creek flows in the southeasterly direction and outlets to the existing Los Angeles River which ultimately drains to the Pacific Ocean at San Pedro Bay. Water bodies downstream of the project site are listed on the most current 303 (d) List as follows:

- Compton Creek
    - Benthic-Macroinvertebrate Bioassessments
    - Coliform Bacteria
    - Copper
    - Lead
    - pH
    - Trash
- Los Angeles River
    - Ammonia
    - Cadmium
    - Coliform Bacteria
    - Dissolved Copper
    - Cyanide
    - Diazinon
    - Lead
    - Nutrients (Algae)
    - pH
    - Trash
    - Dissolved Zinc
- San Pedro Bay
    - Chlordane

All facilities downstream of the project site are engineered, therefore the project is exempt from Hydromodification Control requirements.

E. Proposed Site Drainage Conditions

The proposed development site comprises a total of 2.45 acres. The proposed site consists of 60 residential units with private garages, a private drive aisle, sidewalks, guest parking areas, and associated landscaping.

Proposed drainage will be directed as sheet flow overland and through a series of area drains towards proposed Modular Wetlands System (MWS) Biofiltration Vaults for water quality treatment prior to discharging to the existing LACFCD 66" storm drain within W. Compton Boulevard. The proposed area drain system will collect surface runoff within landscaped and backyard areas and convey flows directly to the proposed MWS Biofiltration Vaults via proposed underground storm drain. Street surface flows will be conveyed via proposed curb and gutter towards two (2) proposed curb-inlet catch basins located along the private drive aisle. The proposed catch basins will be equipped with a Dvert system designed to divert low flows to the proposed MWS Biofiltration Vaults. Treated stormwater will be conveyed via proposed underground storm drain to proposed underground detention systems which will be outflow controlled to mitigate peak discharge to the existing LACFCD storm drain within W. Compton Boulevard. During larger storm events and when the MWS Biofiltration Vaults are at capacity, the Dvert system within the catch basins and an internal bypass within the MWS Biofiltration Vaults will allow for high flows to bypass treatment and flow directly to the proposed detention systems via the proposed storm drain system. Drainage from the site will be conveyed from the detention system to the existing LACFCD 66" storm drain at two (2) points of connection. Upon discharging to the existing LACFCD storm drain, site runoff will follow the historic drainage pattern.

Refer to Figure 2, BMP Exhibit for additional information.

F. LID Project Types, Characteristics, & Activities

Per the Los Angeles Department of Public Works (LACDPW), *Low Impact Development Standards Manual*, dated February 2014, the proposed project is classified as a "Designated Project." A "Designated Project" is defined by the LACDPW as follows:

> "Redevelopment projects, which are developments that result in creation or addition or replacement of either: (1) 5,000 square feet or more of impervious surface on a site that was previously developed as described in the above bullets; or (2) 10,000 square feet or more of impervious surface area on a site that was previous developed as a single family home."

G. Pollutant Source Identification and BMP Selection

The following is a list of materials to be used in the daily construction activities at the project site, which will potentially contribute to pollutants, other than sediment, to storm water runoff. Control Practices for each activity are identified below:

- Vehicle fluids, including oil, grease, petroleum, and coolants from personal vehicles
- Landscaping materials and wastes (topsoil, plant materials, herbicides, fertilizers, mulch, pesticides)
- General trash debris and litter
- Pet waste (bacteria/ fecal coliforms)

The Best Management Practices (BMPs) that have been selected for implementation on this project are detailed in the following sections.

H. Source Control BMPs

Project proponents shall implement Site Design concepts that achieve each of the following:

- Minimize Urban Runoff
- Minimize Impervious Footprint
- Conserve Natural Areas
- Minimize Directly Connected Impervious Areas (DCIAs)

Table-1 identifies the source control and treatment BMPs and how each is implemented to achieve each Site Design concept. BMP fact sheets are provided by the LACDPW *Low Impact Development Standards Manual* and the California Stormwater Quality Association.

Table-1: Source Control BMPs

BMP	BMP DESCRIPTION	CHECK ONE		IF NOT APPLICABLE, STATE BRIEF REASON
		INCLUDED?	NOT APPLICABLE

BMP	BMP DESCRIPTION	CHECK ONE		IF NOT APPLICABLE, STATE BRIEF REASON
		INCLUDED?	NOT APPLICABLE	
	Drainage Facility Inspection and Maintenance	X		
	Structural Source Control BMPs:			
S-1	Storm Drain Message and Signage	X		
S-8	Landscape Irrigation Practices	X		
SD-11	Roof Runoff Controls	X		
	Protect Slopes and Channels		X	No proposed slopes and channels
S-6	Outdoor Vehicle/Equipment/ Accessory Washing Area		X	No proposed car wash racks
	Proper Site Design:			
S-7	Fuel and Maintenance Area		X	No proposed fueling areas
SD-33	Air/Water Supply Area Drainage		X	No proposed air/water supply
S-3	Outdoor Trash Storage and Waste Handling Area		X	No proposed waste handling areas
S-4	Outdoor Loading/ Unloading Dock Area		X	No proposed loading/unloading dock areas
S-5	Outdoor Vehicle/Equipment Repair/Maintenance Area		X	No proposed maintenance bays
S-6	Outdoor Vehicle/Equipment/ Accessory Washing Area		X	No proposed wash areas
S-2	Outdoor Material Storage Area		X	No proposed material storage areas
SD-36	Outdoor Work Areas or Processing Areas		X	No proposed outdoor work areas
	Provide Wash Water Controls for Food Preparation Areas		X	No proposed food preparation areas

Non-Structural Measures

Non-structural BMPs are generally managerial, educational, inspection and/ or maintenance oriented. These items consist of educating employees and occupants, developing and implementing HOA guidelines, implementing BMPs and enforcing Code requirements. Non-structural BMPs used for this project are summarized below:

Education for Employees and Occupants

Practical informational materials will be provided to homeowners, HOA and employees on general good housekeeping practices that contribute to protection of storm water quality. Among other things, these materials will describe the use of chemicals (including household type) that should be limited to the property, with no discharge of specified wastes via hosing or other direct discharge to gutters, catch basins and storm drains. Initially, the Owner will provide these materials. Thereafter, such materials will be available through the HOA education program.

This program must be maintained, enforced, and updated periodically by the HOA. Educational materials including, but not limited to, the materials included in the Appendix F of this plan will be made available to the employees and contractors of the HOA.

Activity Restrictions

Activities on this site will be limited to activities related to residential living. The project's Conditions, Covenants, and Restrictions (CC&Rs) will outline the activities that are restricted on the property. Such activities related to the LID include car washing, car maintenance and disposal of used motor fluids, pet waste cleanup, and trash container areas.

Efficient Landscape System & Landscape Maintenance

Management programs will be designed and established by the HOA, who will maintain the common areas within the project site. These programs will include how to mitigate the potential dangers of fertilizer and pesticide usage (refer to the Maintenance and Frequency Table). Ongoing maintenance will be consistent with the State of California Model- Water Efficient Landscape Ordinance. Fertilizer and pesticide usage shall be consistent with County Management Guidelines for use of Fertilizers and Pesticides.

Street Sweeping in Private Streets and Parking Lots

The HOA shall have all streets and parking lots swept on a weekly basis. This procedure will be intensified around October 15th of each year prior to and throughout rain storm period.

Drainage Facility Inspection & Maintenance

The HOA will be responsible for implementing each of the BMPs detailed in this plan. The HOA will also be responsible for cleaning and maintaining the BMPs on a regular basis. Refer to Appendix G for the Operation and Maintenance Plan. Refer to Appendix C for site specific drainage BMP information.

Storm Drain Stenciling/ Signage
Phrase "No Dumping – Drains to Ocean" or equally effective phrase to be stenciled on catch basins to alert the public to the destination of pollutants discharged into storm water. This stenciling will be inspected and re-stenciled on a periodic basis by the HOA. Refer to Table 4 for maintenance frequency.

Landscape & Irrigation System Design
As part of the design of all common area landscape irrigation shall employ water conservation principals, including, but not limited to, such provisions as water sensors, programmable irrigation times (for short cycles), etc. will be used. Such common areas will be maintained by the HOA.

Common Area Litter Control
The HOA must implement trash management and litter control procedures in common areas aimed at reducing pollution of drainage water. The HOA may contract a landscape maintenance company to provide this service during regularly scheduled maintenance which will consist of litter patrol and noting trash disposal violations and reporting the violations to the HOA for investigation.

Title 22 CC&R Compliance
The HOA will comply with this Regulation as part of the development's CC&Rs. CC&Rs will be prepared as a separate document and reviewed by the City's Attorney.

Uniform Fire Code Implementation
The HOA will comply with this Code as part of the development's CC&Rs. CC&Rs will be prepared as a separate document and reviewed by the City's Attorney.

Employee Training
A training program will be established as it would apply to future employees, contractors, and homeowners of the HOA to inform and train in maintenance activities regarding the impact of dumping oil, paints, solvents, or other potentially harmful chemicals into storm drains; the proper use of fertilizers and pesticides in landscaping maintenance practices; and the impacts of littering and improper water disposal.

The HOA (or a hired firm) will conduct the training program which will include targeted training sessions with specific construction disciplines (landscaping, concrete finishers, painters, etc.). See Appendix F for examples of educational materials that will be provided to the Employees.

The project's CC&Rs will include provisions for future employee training programs conducted on a yearly based prior to the rainy season.

I. Structural BMPs

Structural BMPs shall be installed by the developer, through the construction and development of the project, for instance; landscaping and irrigation systems shall be designed by licensed landscape architects and installed by qualified contractors to specifications and standards of the City of Compton. The structural BMPs used for this project are summarized below:

Expected pollutants associated with this development include vehicle discharge fluids, landscaping materials and waste, litter, and pet waste. To mitigate these pollutants, the structural best management practices summarized below.

Table-2: Design BMPs

BMP	TECHNIQUE	INCLUDED? YES	INCLUDED? NO	BRIEF DESCRIPTION OF METHOD
SD-10	Minimize Impervious Area/Maximize Permeability (C-Factor Reduction)	X		We have incorporated landscape areas wherever possible within the project site. See Appendix B for details.
	Minimize Directly Connected Impervious Areas (DCIAs) (C-Factor Reduction)	X		We minimize DCIAs by limiting sidewalks and parking areas to the minimum necessary for proper use. Stepping stones are used in areas with minimal foot traffic.
	Create Reduced or "Zero Discharge" Areas (Runoff Volume Reduction)	X		The entire SWQDV will be infiltrated, resulting in an overall runoff volume reduction.

Table-3: Treatment BMPs

BMP	NAME	INCLUDED?		IF NOT APPLICABLE, STATE BRIEF REASON
		YES	NO	
VEG-5	Vegetated Filter Strip		X	Alternative BMP selected
VEG-4	Vegetated Swale		X	Space not available for BMP
MP-40	Media Filter		X	Alternative BMP selected
MP-52	Drain Inserts		X	Alternative BMP selected
T-3	Extended Detention Basin		X	Alternative BMP selected
T-4	Wet Pond		X	Alternative BMP selected
T-2	Constructed Wetland		X	Alternative BMP selected
T-1	Sand Filter		X	Alternative BMP selected
RET-5	Permeable Pavement without an Underdrain		X	Alternative BMP selected
RET-2	Infiltration Basin		X	Alternative BMP selected
RET-3	Infiltration Trench		X	Alternative BMP selected
TC-40	Media Filter		X	Alternative BMP selected
BIO-1	Biofiltration	X		MWS Biofiltration Vaults will be utilized in the proposed development.

Biofiltration: Modular Wetlands System, Biofiltration Units

Modular Wetland System (MWS) Biofiltration Vaults will be utilized to capture and treat the stormwater runoff prior to leaving the site. MWS utilizes a 3-phase treatment train by conveying stormwater runoff through a pre-treatment chamber, planting or "Wetland" chamber and discharge chamber. Treated stormwater will be discharged into the proposed underground storm drain system which connects directly to the an existing LACFCD 66" storm drain system within W. Compton Boulevard.

Based on the grading and drainage design, the site will be divided into two (2) Drainage Management Areas (DMA) and utilize two (2) MWS Biofiltration Vaults to provide treatment of stormwater runoff. The design flowrate and treatment capacity for each DMA are as follows:

Drainage Management Area (DMA)	Size (ac)	Peak Flow Rate (cfs)*	Peak Flow Rate x 1.5 (cfs)	MWS Model	MWS HGL Height (ft)	Treatment Capacity (cfs)
1	1.085	0.237	0.356	MWS-L-8-16-V	3.4	0.462
2	1.365	0.298	0.447	MWS-L-8-16-V	3.4	0.462
Total	2.45	0.535	0.803	-		0.924

*Los Angeles County Department of Public Works (LACDPW) HydroCalc Software was utilized to calculate peak flowrates. The governing flowrate between the 0.75-inch storm event and the 85th Percentile storm event was utilized for design. Refer to Appendix A for HydroCalc outputs.

The proposed site will generate a total design flowrate of approximately 0.535 cfs. After multiplying this value by a factor of 1.5, the required treatment flowrate equals 0.803 cfs. The MWS Biofiltration Vaults provide a total treatment capacity of approximately 0.924 cfs and therefore provide more than enough treatment for the proposed development. The MWS systems will address the pollutants of concern associated with the development type. Refer to Appendix C for more information on MWS Biofiltration Vaults.

Catch Basin Inspection

The HOA will maintain the drainage systems, including catch basins and culverts. The HOA is required to have catch basins inspected and, if necessary, cleaned prior to the storm season, no later than October 15th each year or prior to the first 24-hour storm event, whichever occurs first. These duties may be contracted out to the landscape maintenance firm hired by the HOA. Please see Appendix E for maintenance program. Refer to Appendix G for the Operation and Maintenance Plan.

Runoff-Minimizing Landscape Design

As part of the design of all common area landscape areas, similar planting material with similar water requirements will be used in order to reduce excess irrigation runoff and promote surface filtration. Such common areas will be maintained by the HOA.

Community Car Wash Racks
No community car wash rack or area will be provided, therefore, vehicle washing by residents on the property will not be allowed per the CC&Rs.

Self-Contained Washing
Self-contained washing of vehicles by residents or owners on the property will not be allowed per the CC&Rs.

Outdoor Material Storage Areas
Outdoor material storage areas refer to storage areas or storage facilities solely for the storage of materials. Improper storage of materials outdoors may provide an opportunity for toxic compounds, oil and grease, heavy metals, nutrients, suspended solids, and other pollutants to enter the storm water conveyance system. Outdoor Storage by residents or owners on the property will not be allowed per the CC&Rs.

J. BMP Maintenance, Inspection, and Repair

Inspections will be conducted as follows:

- Annually and prior to the start of the rainy season
- Every (1) month during rainy season
- At any other time(s) or intervals of time specified in the contract documents

Repairs and/ or maintenance procedures shall be carried out at the soonest possible time.

K. Inspection, Maintenance, and Responsibility for BMPs

Table-4 and Table-5 show the lists of the post-construction BMPs (routine non-structural and structural), the required ongoing maintenance, the inspection and maintenance frequency, the inspection criteria, and the entity or party responsible for implementation, maintenance, and/or inspection.

Table-4: Non-Structural BMP Maintenance Responsibility/Frequency Matrix

BMP	RESPONSIBILITY	FREQUENCY
Homeowner/ Business owner Education, Activity Restrictions	HOA will provide educational materials. Those materials and responsibilities must be passed onto subsequent property owners.	Continuous. CC&Rs to be provided to homeowners at the time they purchase the property and updates provided by the HOA as they occur.
Common Area Landscape Management	HOA will appoint a landscape maintenance contractor	Monthly during regular maintenance and use with management guidelines for use of fertilizers and pesticides.
Parking Areas and Drive Aisle Management	HOA	The Drives Aisles are to be swept on a routine scheduled basis to facilitate the pickup of trash and debris (plant or otherwise) and to remove excessive oil, grease and build-up. During sweeping, debris is to be removed from the parking areas and drives and then scrubbed and rinsed. This sweeping schedule will be at a minimum occurrence of once a week and as necessary to rid / reduce active pollutants from the pavement areas. This maintenance requirement will be listed in the Convent, Conditions and Restrictions (CC&Rs) of this project. These CC&Rs will be recorded to the property at the County Recorder's Office and be included on the final Title report of these properties.
Litter Control by Sweeping	HOA	Weekly inspection of trash receptacles to ensure that lids are closed and pick up any excess trash on the ground, noting trash disposal violations to the HOA for remediation.
Employee Training	HOA	Monthly for maintenance personnel and employees to include the educational materials contained in the approved LID.
Common Area Catch Basin Inspection & Cleaning	HOA will appoint a landscape maintenance contractor for common areas and storm drain facilities.	Inspect basins once a month. Clean debris and silt in bottom of catch basins as needed. Intensified on or about October 15th each year or prior to the first 24-hour storm event, whichever occurs first. Refer to Appendix E.

Table-5: Structural BMP Maintenance Responsibility/ Frequency Matrix

BMP	RESPONSIBILITY	FREQUENCY
Common Area Efficient Irrigation	HOA will appoint a landscape contractor after construction	Once a week, in conjunction with maintenance activities. Verify that runoff minimizing landscape design continues to function by checking that water sensors are functioning properly, that irrigation heads are adjusted properly to eliminate overspray to hardscape areas, and to verify that irrigation timing and cycle lengths are adjusted in accordance with water demands, given time of year, weather and day or night time temperatures.
Common Area Runoff Efficient Landscape Design	HOA will appoint a landscaping contractor	Once a week in conjunction with maintenance activities and prior to finalizing any replanting schemes. Verify that plants continue to be grouped according to similar water requirements in order to reduce excess irrigation runoff.
Modular Wetlands System (MWS) Biofiltration Vaults	HOA	MWS Biofiltration Vaults maintenance will conform to manufacturer's specifications. Please see additional information in Appendix C

L. Operation/Maintenance Funding after Project Completion

The post-construction BMPs as described above will be funded and maintained by:

Kim Prijatel
Tel: (949) 258-7555
City Ventures
3121 Michelson Drive, Suite 150
Irvine, CA 92612

Maintenance and requirements of the maintenance for the properties will be listed in the Convent, Conditions and Restrictions (CC&Rs) of this project and will be the responsibility of the property owner at all times. These CC&Rs will be recorded to the property at the County Recorder's Office and be included on the Title report of these properties.

Appendix A:
Volume and Infiltration Calculations & Hydrologic Report

The proposed development was analyzed for the 0.75-in storm event and the 85th Percentile storm event using the LACDPW HydroCalc software. The governing peak flowrate between the two storm events was utilized for design. In accordance with the LA County BMP Design Manual, a factor of 1.5 was applied to obtain the design flowrate. Below is a summary of the HydroCalc outputs:

DMA	85th Percentile Storm ✓		0.75-in Storm		Governing Flowrate (cfs)	Flowrate x 1.5 (cfs)
	Volume (cf)	Flowrate (cfs)	Volume (cf)	Flowrate (cfs)		
1	2678	0.237	2308	0.195	0.237	0.356
2	3369	0.298	2904	0.245	0.298	0.447

Refer to LACDPW HydroCalc Output Data within this Appendix for Volume and Flowrate Calculations.

Appendix B:
Site BMPs

S-1: Storm Drain Message and Signage

Purpose

Waste material dumped into storm drain inlets can adversely impact surface and ground waters. In fact, any material discharged into the storm drain system has the potential to significantly impact downstream receiving waters. Storm drain messages have become a popular method of alerting and reminding the public about the effects of and the prohibitions against waste disposal into the storm drain system. The signs are typically stenciled or affixed near the storm drain inlet or catch basin. The message simply informs the public that dumping of wastes into storm drain inlets is prohibited and/or that the drain ultimately discharges into receiving waters.

General Guidance

- The signs must be placed so they are easily visible to the public.
- Be aware that signs placed on sidewalk will be worn by foot traffic.

Design Specifications

- Signs with language and/or graphical icons that prohibit illegal dumping, must be posted at designated public access points along channels and streams within the project area. Consult with Los Angeles County Department of Public Works (LACDPW) staff to determine specific signage requirements for channels and streams.
- Storm drain message markers, placards, concrete stamps, or stenciled language/icons (e.g., “No Dumping – Drains to the Ocean”) are required at all storm drain inlets and catch basins within the project area to discourage illegal or inadvertent dumping. Signs should be placed in clear sight facing anyone approaching the storm drain inlet or catch basin from either side (see Figure D-1 and Figure D-2). LACDPW staff should be contacted to determine specific requirements for types of signs and methods of application. A stencil can be purchased for a nominal fee from LACDPW Building and Safety Office by calling (626) 458-3171. All storm drain inlet and catch basin locations must be identified on the project site map.

Maintenance Requirements

Legibility and visibility of markers and signs should be maintained (e.g., signs should be repainted or replaced as necessary). If required by LACDPW, the owner/operator or homeowner’s association shall enter into a maintenance agreement with the agency or record a deed restriction upon the property title to maintain the legibility of placards and signs.

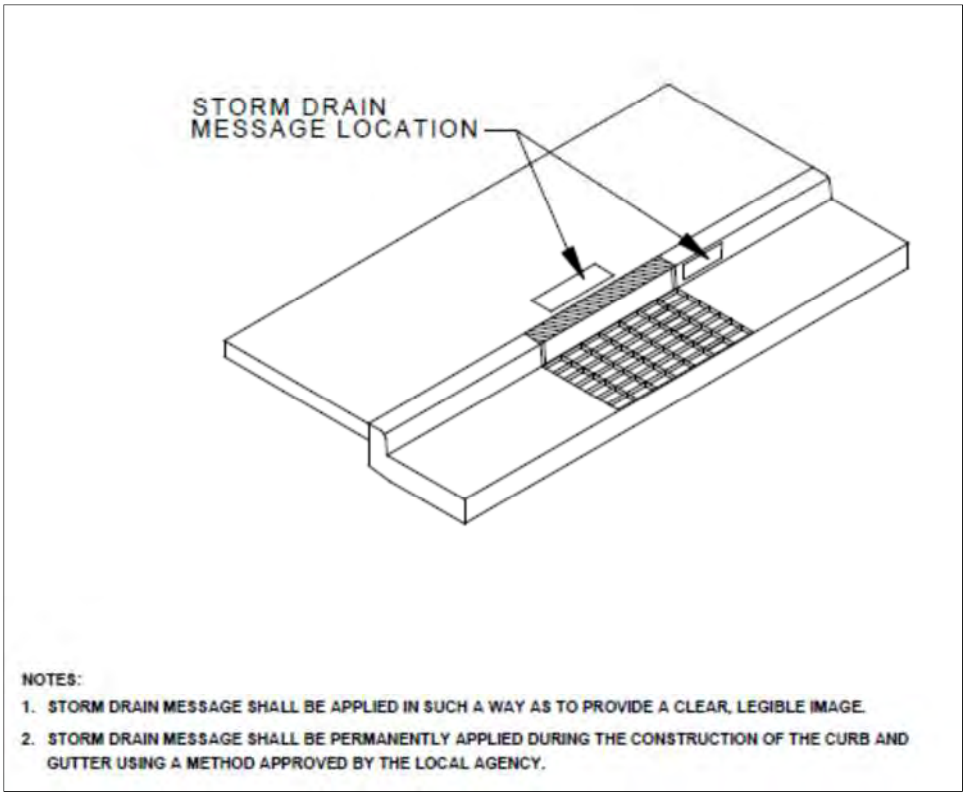

Figure D-1. Storm Drain Message Location – Curb Type Inlet

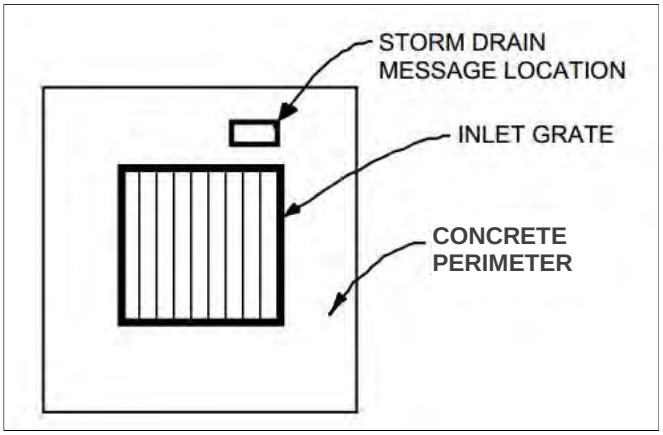

Figure D-2. Storm Drain Message Location – Catch Basin/Area Type Inlet

S-8: Landscape Irrigation Practices

Purpose

Irrigation runoff provides a pathway for pollutants (i.e., nutrients, bacteria, organics, sediment) to enter the storm drain system. By effectively irrigating, less runoff is produced resulting in less potential for pollutants to enter the storm drain system.

General Guidance

- Do not allow irrigation runoff from the landscaped area to drain directly to storm drain system.
- Minimize use of fertilizer, pesticides, and herbicides on landscaped areas.
- Plan sites with sufficient landscaped area and dispersal capacity (e.g., ability to receive irrigation water without generating runoff).
- Consult a landscape professional regarding appropriate plants, fertilizer, mulching applications, and irrigation requirements (if any) to ensure healthy vegetation growth.

Design Specifications

- Choose plants that minimize the need for fertilizer and pesticides.
- Group plants with similar water requirements and water accordingly.
- Use mulch to minimize evaporation and erosion.
- Include a vegetative boundary around project site to act as a filter.
- Design the irrigation system to only water areas that need it.
- Install an approved subsurface drip, pop-up, or other irrigation system.[1] The irrigation system should employ effective energy dissipation and uniform flow spreading methods to prevent erosion and facilitate efficient dispersion.
- Install rain sensors to shut off the irrigation system during and after storm events.
- Include pressure sensors to shut off flow-through system in case of sudden pressure drop. A sudden pressure drop may indicate a broken irrigation head or water line.
- If the hydraulic conductivity in the soil is not sufficient for the necessary water application rate, implement soil amendments to avoid potential geotechnical hazards (i.e., liquefaction, landslide, collapsible soils, and expansive soils).

[1] If alternative distribution systems (e.g., spray irrigation) are approved, the County will establish guidelines to implement these new systems.

- For sites located on or within 50 feet of a steep slope (15% or greater), do not irrigate landscape within three days of a storm event to avoid potential geotechnical instability.[2]
- Implement Integrated Pest Management practices.

For additional guidelines and requirements, refer to the Los Angeles County Department of Health Services.

Maintenance Requirements

Maintain irrigation areas to remove trash and debris and loose vegetation. Rehabilitate areas of bare soil. If a rain or pressure sensor is installed, it should be checked periodically to ensure proper function. Inspect and maintain irrigation equipment and components to ensure proper functionality. Clean equipment as necessary to prevent algae growth and vector breeding. Maintenance agreements between LACDPW and the owner/operator may be required. Failure to properly maintain building and property may subject the property owner to citation.

[2] As determined by the City of Los Angeles, Building and Safety Division

Site Design & Landscape Planning SD-10

Design Objectives

- ☑ Maximize Infiltration
- ☑ Provide Retention
- ☑ Slow Runoff
- ☑ Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

Description

Each project site possesses unique topographic, hydrologic, and vegetative features, some of which are more suitable for development than others. Integrating and incorporating appropriate landscape planning methodologies into the project design is the most effective action that can be done to minimize surface and groundwater contamination from stormwater.

Approach

Landscape planning should couple consideration of land suitability for urban uses with consideration of community goals and projected growth. Project plan designs should conserve natural areas to the extent possible, maximize natural water storage and infiltration opportunities, and protect slopes and channels.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment.

Design Considerations

Design requirements for site design and landscapes planning should conform to applicable standards and specifications of agencies with jurisdiction and be consistent with applicable General Plan and Local Area Plan policies.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

Designing New Installations

Begin the development of a plan for the landscape unit with attention to the following general principles:

- Formulate the plan on the basis of clearly articulated community goals. Carefully identify conflicts and choices between retaining and protecting desired resources and community growth.
- Map and assess land suitability for urban uses. Include the following landscape features in the assessment: wooded land, open unwooded land, steep slopes, erosion-prone soils, foundation suitability, soil suitability for waste disposal, aquifers, aquifer recharge areas, wetlands, floodplains, surface waters, agricultural lands, and various categories of urban land use. When appropriate, the assessment can highlight outstanding local or regional resources that the community determines should be protected (e.g., a scenic area, recreational area, threatened species habitat, farmland, fish run). Mapping and assessment should recognize not only these resources but also additional areas needed for their sustenance.

Project plan designs should conserve natural areas to the extent possible, maximize natural water storage and infiltration opportunities, and protect slopes and channels.

Conserve Natural Areas during Landscape Planning

If applicable, the following items are required and must be implemented in the site layout during the subdivision design and approval process, consistent with applicable General Plan and Local Area Plan policies:

- Cluster development on least-sensitive portions of a site while leaving the remaining land in a natural undisturbed condition.
- Limit clearing and grading of native vegetation at a site to the minimum amount needed to build lots, allow access, and provide fire protection.
- Maximize trees and other vegetation at each site by planting additional vegetation, clustering tree areas, and promoting the use of native and/or drought tolerant plants.
- Promote natural vegetation by using parking lot islands and other landscaped areas.
- Preserve riparian areas and wetlands.

Maximize Natural Water Storage and Infiltration Opportunities Within the Landscape Unit

- Promote the conservation of forest cover. Building on land that is already deforested affects basin hydrology to a lesser extent than converting forested land. Loss of forest cover reduces interception storage, detention in the organic forest floor layer, and water losses by evapotranspiration, resulting in large peak runoff increases and either their negative effects or the expense of countering them with structural solutions.
- Maintain natural storage reservoirs and drainage corridors, including depressions, areas of permeable soils, swales, and intermittent streams. Develop and implement policies and

regulations to discourage the clearing, filling, and channelization of these features. Utilize them in drainage networks in preference to pipes, culverts, and engineered ditches.

- Evaluating infiltration opportunities by referring to the stormwater management manual for the jurisdiction and pay particular attention to the selection criteria for avoiding groundwater contamination, poor soils, and hydrogeological conditions that cause these facilities to fail. If necessary, locate developments with large amounts of impervious surfaces or a potential to produce relatively contaminated runoff away from groundwater recharge areas.

Protection of Slopes and Channels during Landscape Design

- Convey runoff safely from the tops of slopes.
- Avoid disturbing steep or unstable slopes.
- Avoid disturbing natural channels.
- Stabilize disturbed slopes as quickly as possible.
- Vegetate slopes with native or drought tolerant vegetation.
- Control and treat flows in landscaping and/or other controls prior to reaching existing natural drainage systems.
- Stabilize temporary and permanent channel crossings as quickly as possible, and ensure that increases in run-off velocity and frequency caused by the project do not erode the channel.
- Install energy dissipaters, such as riprap, at the outlets of new storm drains, culverts, conduits, or channels that enter unlined channels in accordance with applicable specifications to minimize erosion. Energy dissipaters shall be installed in such a way as to minimize impacts to receiving waters.
- Line on-site conveyance channels where appropriate, to reduce erosion caused by increased flow velocity due to increases in tributary impervious area. The first choice for linings should be grass or some other vegetative surface, since these materials not only reduce runoff velocities, but also provide water quality benefits from filtration and infiltration. If velocities in the channel are high enough to erode grass or other vegetative linings, riprap, concrete, soil cement, or geo-grid stabilization are other alternatives.
- Consider other design principles that are comparable and equally effective.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

Redevelopment may present significant opportunity to add features which had not previously been implemented. Examples include incorporation of depressions, areas of permeable soils, and swales in newly redeveloped areas. While some site constraints may exist due to the status of already existing infrastructure, opportunities should not be missed to maximize infiltration, slow runoff, reduce impervious areas, disconnect directly connected impervious areas.

Roof Runoff Controls SD-11

Rain Garden

Design Objectives

- ☑ Maximize Infiltration
- ☑ Provide Retention
- ☑ Slow Runoff
- Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- ☑ Contain Pollutants
- Collect and Convey

Description

Various roof runoff controls are available to address stormwater that drains off rooftops. The objective is to reduce the total volume and rate of runoff from individual lots, and retain the pollutants on site that may be picked up from roofing materials and atmospheric deposition. Roof runoff controls consist of directing the roof runoff away from paved areas and mitigating flow to the storm drain system through one of several general approaches: cisterns or rain barrels; dry wells or infiltration trenches; pop-up emitters, and foundation planting. The first three approaches require the roof runoff to be contained in a gutter and downspout system. Foundation planting provides a vegetated strip under the drip line of the roof.

Approach

Design of individual lots for single-family homes as well as lots for higher density residential and commercial structures should consider site design provisions for containing and infiltrating roof runoff or directing roof runoff to vegetative swales or buffer areas. Retained water can be reused for watering gardens, lawns, and trees. Benefits to the environment include reduced demand for potable water used for irrigation, improved stormwater quality, increased groundwater recharge, decreased runoff volume and peak flows, and decreased flooding potential.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment.

Design Considerations

Designing New Installations

Cisterns or Rain Barrels

One method of addressing roof runoff is to direct roof downspouts to cisterns or rain barrels. A cistern is an above ground storage vessel with either a manually operated valve or a permanently open outlet. Roof runoff is temporarily stored and then released for irrigation or infiltration between storms. The number of rain

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

barrels needed is a function of the rooftop area. Some low impact developers recommend that every house have at least 2 rain barrels, with a minimum storage capacity of 1000 liters. Roof barrels serve several purposes including mitigating the first flush from the roof which has a high volume, amount of contaminants, and thermal load. Several types of rain barrels are commercially available. Consideration must be given to selecting rain barrels that are vector proof and childproof. In addition, some barrels are designed with a bypass valve that filters out grit and other contaminants and routes overflow to a soak-away pit or rain garden.

If the cistern has an operable valve, the valve can be closed to store stormwater for irrigation or infiltration between storms. This system requires continual monitoring by the resident or grounds crews, but provides greater flexibility in water storage and metering. If a cistern is provided with an operable valve and water is stored inside for long periods, the cistern must be covered to prevent mosquitoes from breeding.

A cistern system with a permanently open outlet can also provide for metering stormwater runoff. If the cistern outlet is significantly smaller than the size of the downspout inlet (say ¼ to ½ inch diameter), runoff will build up inside the cistern during storms, and will empty out slowly after peak intensities subside. This is a feasible way to mitigate the peak flow increases caused by rooftop impervious land coverage, especially for the frequent, small storms.

Dry wells and Infiltration Trenches

Roof downspouts can be directed to dry wells or infiltration trenches. A dry well is constructed by excavating a hole in the ground and filling it with an open graded aggregate, and allowing the water to fill the dry well and infiltrate after the storm event. An underground connection from the downspout conveys water into the dry well, allowing it to be stored in the voids. To minimize sedimentation from lateral soil movement, the sides and top of the stone storage matrix can be wrapped in a permeable filter fabric, though the bottom may remain open. A perforated observation pipe can be inserted vertically into the dry well to allow for inspection and maintenance.

In practice, dry wells receiving runoff from single roof downspouts have been successful over long periods because they contain very little sediment. They must be sized according to the amount of rooftop runoff received, but are typically 4 to 5 feet square, and 2 to 3 feet deep, with a minimum of 1-foot soil cover over the top (maximum depth of 10 feet).

To protect the foundation, dry wells must be set away from the building at least 10 feet. They must be installed in solids that accommodate infiltration. In poorly drained soils, dry wells have very limited feasibility.

Infiltration trenches function in a similar manner and would be particularly effective for larger roof areas. An infiltration trench is a long, narrow, rock-filled trench with no outlet that receives stormwater runoff. These are described under Treatment Controls.

Pop-up Drainage Emitter

Roof downspouts can be directed to an underground pipe that daylights some distance from the building foundation, releasing the roof runoff through a pop-up emitter. Similar to a pop-up irrigation head, the emitter only opens when there is flow from the roof. The emitter remains flush to the ground during dry periods, for ease of lawn or landscape maintenance.

Foundation Planting

Landscape planting can be provided around the base to allow increased opportunities for stormwater infiltration and protect the soil from erosion caused by concentrated sheet flow coming off the roof. Foundation plantings can reduce the physical impact of water on the soil and provide a subsurface matrix of roots that encourage infiltration. These plantings must be sturdy enough to tolerate the heavy runoff sheet flows, and periodic soil saturation.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

Potential Alternatives

None

Description and Purpose

Street sweeping and vacuuming includes use of self-propelled and walk-behind equipment to remove sediment from streets and roadways, and to clean paved surfaces in preparation for final paving. Sweeping and vacuuming prevents sediment from the project site from entering storm drains or receiving waters.

Suitable Applications

Sweeping and vacuuming are suitable anywhere sediment is tracked from the project site onto public or private paved streets and roads, typically at points of egress. Sweeping and vacuuming are also applicable during preparation of paved surfaces for final paving.

Limitations

Sweeping and vacuuming may not be effective when sediment is wet or when tracked soil is caked (caked soil may need to be scraped loose).

Implementation

- Controlling the number of points where vehicles can leave the site will allow sweeping and vacuuming efforts to be focused, and perhaps save money.
- Inspect potential sediment tracking locations daily.
- Visible sediment tracking should be swept or vacuumed on a daily basis.

- Do not use kick brooms or sweeper attachments. These tend to spread the dirt rather than remove it.
- If not mixed with debris or trash, consider incorporating the removed sediment back into the project

Costs

Rental rates for self-propelled sweepers vary depending on hopper size and duration of rental. Expect rental rates from $58/hour (3 yd^3 hopper) to $88/hour (9 yd^3 hopper), plus operator costs. Hourly production rates vary with the amount of area to be swept and amount of sediment. Match the hopper size to the area and expect sediment load to minimize time spent dumping.

Inspection and Maintenance

- Inspect BMPs prior to forecast rain, daily during extended rain events, after rain events, weekly during the rainy season, and at two-week intervals during the non-rainy season.
- When actively in use, points of ingress and egress must be inspected daily.
- When tracked or spilled sediment is observed outside the construction limits, it must be removed at least daily. More frequent removal, even continuous removal, may be required in some jurisdictions.
- Be careful not to sweep up any unknown substance or any object that may be potentially hazardous.
- Adjust brooms frequently; maximize efficiency of sweeping operations.
- After sweeping is finished, properly dispose of sweeper wastes at an approved dumpsite.

BIO-1: Biofiltration

Definition

A biofiltration area is a vegetated shallow depression that is designed to receive and treat stormwater runoff from downspouts, piped inlets, or sheet flow from adjoining paved areas. A shallow ponding zone is provided above the vegetated surface for temporary storage of stormwater runoff. During storm events, stormwater runoff accumulates in the ponding zone and gradually infiltrates the surface and filters through the biofiltration soil media before being collected by an underdrain system.

Stormwater runoff treatment occurs through a variety of natural mechanisms as stormwater runoff filters through the vegetation root zone. In biofiltration areas, microbes and organic material in the biofiltration soil media help promote the adsorption of pollutants (e.g., dissolved metals and petroleum hydrocarbons) into the soil matrix. Plants utilize soil moisture and promote the drying of the soil through transpiration. Biofiltration areas are typically planted with native, drought-tolerant plant species that do not require fertilization and can withstand wet soils for at least 96 hours.

A schematic of a typical biofiltration area is presented in Figure E-7.

LID Ordinance Requirements

Biofiltration can be used as an alternative compliance measure.

Pollutant of Concern	Treated by Biofiltration?
Suspended solids	No
Total phosphorus	No
Total nitrogen	Yes
Total Kjeldahl nitrogen	Yes
Cadmium, total	No
Chromium, total	Yes
Copper, total	No
Lead, total	Yes
Zinc, total	No

Advantages

- Has a low cost for installation
- Enhances site aesthetics
- Requires little maintenance

Disadvantages

- May require individual owner/tenants to perform maintenance

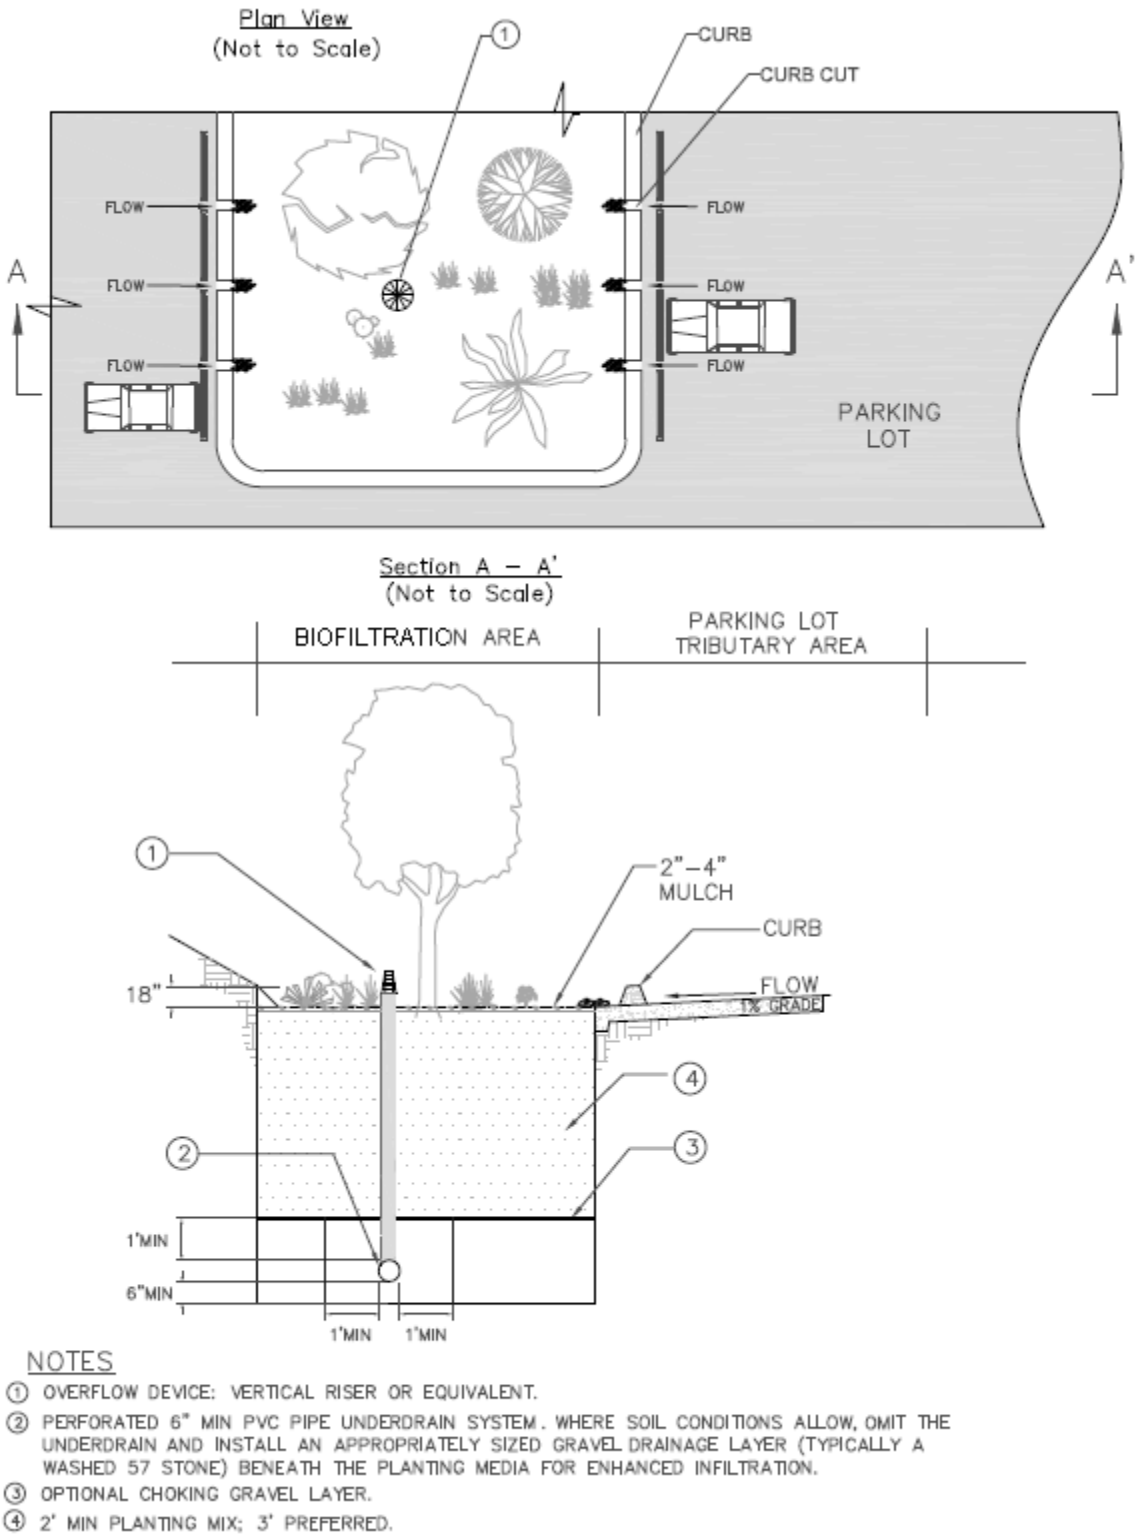

Figure E-7. Biofiltration Area Schematic

General Constraints and Implementation Considerations

- Biofiltration areas can be applied in various settings including, but not limited to:
  - Individual lots for rooftop, driveway, and other on-site impervious surface
  - Shared facilities located in common areas for individual lots
  - Areas within loop roads or cul-de-sacs
  - Landscaped parking lot islands
  - Within right-of-ways along roads
  - Common landscaped areas in apartment complexes or other multi-family housing designs
  - Parks and along open space perimeter
- If tire curbs are provided and parking stalls are shortened, cars are allowed to overhang the biofiltration area.
- Biofiltration areas must be located sufficiently far from structure foundations to avoid damage to structures (as determined by a certified structural or geotechnical engineer).
- Any parking areas bordering the biofiltration area must be monolithically poured concrete or deepended curb concrete to provide structural stability to the adjacent parking section.
- Geomembrane liners must be used in areas subject to spills or pollutant hot spots.
- During construction activities should avoid compaction of native soils below planting media layer or gravel zone.
- Stormwater runoff must be diverted around the biofiltration area during the period of vegetation establishment. If diversion is not feasible, the graded and seeded areas must be protected with suitable sediment controls (i.e., silt fences).All damaged areas should be repaired, seeded, or re-planted immediately.
- The general landscape irrigation system should incorporate the biofiltration area, as applicable.

Design Specifications

The following sections describe the design specifications for biofiltration areas.

Geotechnical

Due to the potential to contaminate groundwater, cause slope instability, impact surrounding structures, and potential for insufficient infiltration capacity, an extensive geotechnical site investigation must be conducted during the site planning process to verify site suitability for biofiltration. All geotechnical investigations must be performed according to the most recent GMED Policy GS 200.1. Soil infiltration rates and the

groundwater table depth must be evaluated to ensure that conditions are satisfactory for proper operation of a biofiltration area. The project applicant must demonstrate through infiltration testing, soil logs, and the written opinion of a licensed civil engineer that sufficiently permeable soils exist on-site to allow the construction of a properly functioning biofiltration system.

Biofiltration areas are appropriate for soils with a minimum corrected in-situ infiltration rate of 0.3 in/hr. The geotechnical report must determine if the proposed project site is suitable for a biofiltration area and must recommend a design infiltration rate (see "Design Infiltration Rate" under the "Sizing" section). The geotechnical investigation should be such that a good understanding is gained as to how the stormwater runoff will move through the soil (horizontally or vertically) and if there are any geological conditions that could inhibit the movement of water.

Pretreatment

Pretreatment refers to design features that provide settling of large particles before stormwater runoff enters a stormwater quality control measure in order to reduce the long-term maintenance burden. Pretreatment should be provided to reduce the sediment load entering a biofiltration area in order to maintain the infiltration rate of the biofiltration area. To ensure that biofiltration areas are effective, the project applicant must incorporate pretreatment devices that provide sediment removal (e.g., vegetated swales, vegetated filter strips, sedimentation manholes, and proprietary devices). The use of at least two pretreatment devices is highly recommended for biofiltration areas.

Geometry

- Biofiltration areas must be sized to capture and treat 1.5 times the SWQDv that is not reliably retained on the project site with an 18-inch maximum ponding depth.
- The planting soil depth must be a minimum of two feet, although three feet is preferred. The planting soil depth should provide a beneficial root zone for the chosen vegetation and adequate water storage for the stormwater runoff. A deeper planting soil depth will also provide a smaller surface area footprint.
- A gravel storage layer below the biofiltration area soil media is required to provide adequate temporary storage to retain 1.5 times the SWQDv that is not reliably retained on the project site and to promote infiltration.

Sizing

Biofiltration areas are sized using a simple sizing method where 1.5 times the SWQDv that is not reliably retained on the project site must be completely filtered within 96 hours. If the incoming stormwater runoff flow rate is lower than the long term filtration rate, above ground storage does not need to be provided. If the incoming stormwater runoff flow rate is higher than the long term filtration rate, above ground storage shall be provided (see steps below).

Step 1: Calculate the design volume

Biofiltration areas should be sized to capture and treat 1.5 times the portion of the SWQDv (see Section 6 for SWQDv calculation procedures) that is not reliability retained on the project site, as calculated by the equation below:

$$V_B = 1.5 \times (SWQDv - V_R)$$

Where:

V_B = Biofiltration volume [ft^3];
SWQDv = Stormwater quality design volume [ft^3]; and
V_R = Volume of stormwater runoff reliably retained on-site [ft^3].

Step 2: Calculate the design infiltration rate

Determine the corrected in-situ infiltration rate (f_{design}) of the native soil using the procedures described in the most recent GMED Policy GS 200.1.

Step 3: Calculate the surface area

Select a surface ponding depth (d) that satisfies the geometric criteria and meets the site constraints. Selecting a deeper ponding depth (up to 1.5 ft) generally yields a smaller footprint, however, it will require greater consideration for public safety, energy dissipation, and plant selection.

Calculate the time for the selected ponding depth to filter through the planting media using the following equation:

$$\mathrm{d} = t_p \times \frac{\mathrm{f_{design}}}{12}$$

Where:

d = Ponding depth (max 1.5 ft) [ft];
t_p = Required detention time for surface ponding (max 96 hr) [hr]; and
f_{design} = Design infiltration rate [in/hr].

If t_p exceeds 96 hours, reduce surface ponding depth (d). In nearly all cases, t_p should not approach 96 hours unless f_{design} is low.

Calculate the required infiltrating surface (filter bottom area) using the following equation:

$$A = \frac{V_B}{d}$$

Where:

A = Bottom surface area of biofiltration area [ft^2];
V_B = Biofiltration design volume [ft^3]; and
d = Ponding depth (max 1.5 ft) [ft].

Flow Entrance and Energy Dissipation

Maintain a minimum slope of 1 percent for pervious surfaces and 0.5 percent for impervious surfaces to the biofiltration area inlet. The following types of flow entrance can be used for biofiltration cells:

- Level spreaders (i.e., slotted curbs) can be used to facilitate sheet flow.
- Dispersed, low velocity flow across a landscape area. Dispersed flow may not be possible given space limitations or if the biofiltration area is controlling roadway or parking lot flows where curbs are mandatory.
- Dispersed flow across pavement or gravel and past wheel stops for parking areas.
- Flow spreading trench around perimeter of biofiltration area. May be filled with pea gravel or vegetated with 3:1 side slopes similar to a swale. A vertical-walled open trench may also be used at the discretion of LACDPW.
- Curb cuts for roadside or parking lot areas, if approved by LACDPW: curb cuts should include rock or other erosion controls in the channel entrance to dissipate energy. Flow entrance should drop two to three inches from curb line and provide an area for settling and periodic removal of sediment and coarse material before flow dissipates to the remainder of the biofiltration area.
- Piped entrances, such as roof downspouts, should include rock, splash blocks, or other erosion controls at the entrance to dissipate energy and disperse flows.
- Woody plants (trees, shrubs, etc.) can restrict or concentrate flows and can be damaged by erosion around the root ball and must not be placed directly in the entrance flow path.

Drainage

Biofiltration areas must be designed to drain below the planting soil in less than 96 hours. Soils must be allowed to dry out periodically in order to restore hydraulic capacity to receive stormwater runoff from subsequent storm events, maintain infiltration rates, maintain adequate soil oxygen levels for healthy soil biota and vegetation, and provide proper soil conditions for biodegradation and retention of pollutants.

Underdrain

Biofiltration areas require an underdrain to collect and discharge stormwater runoff that has been filtered through the soil media, but not infiltrated, to another stormwater quality control measure, storm drain system, or receiving water. The underdrain must have a mainline diameter of eight inches using slotted PVC SDR 26 or PVC C9000. Slotted PVC allows for pressure water cleaning and root cutting, if necessary. The slotted pipe

should have two to four rows of slots cut perpendicular to the axis of the pipe or at right angles to the pitch of corrugations. Slots should be 0.04 to 0.1 inches wide with a length of 1 to 1.25 inches. Slots should be longitudinally-spaced such that the pipe has a minimum of one square inch opening per lineal foot and should face down.

The underdrain should be placed in a gravel envelope (Class 2 Permeable Material per Caltrans Spec. 68-1.025) that measures three feet wide and six inches deep. The underdrain is elevated from the bottom of the biofiltration area by six inches within the gravel envelope to create a fluctuating anaerobic/aerobic zone below the underdrain to facilitate denitrification within the anaerobic/anoxic zone and reduce nutrient concentrations. The top and sides of the underdrain pipe should be covered with gravel to a minimum depth of 12 inches. The underdrain and gravel envelope should be covered with a geomembrane liner to prevent clogging. The following aggregate should be used for the gravel envelope:

Particle Size (ASTM D422)	% Passing by Weight
¾ inch	100%
¼ inch	30-60%
#8	20-50%
#50	3-12%
#200	0-1%

Underdrains should be sloped at a minimum of 0.5 percent and must drain freely to an approved discharge point.

Rigid non-perforated observation pipes with a diameter equal to the underdrain diameter should be connected to the underdrain to provide a clean-out port as well as an observation well to monitor drainage rates. The wells/clean-outs should be connected to the perforated underdrain with the appropriate manufactured connections. The wells/clean-outs should extend six inches above the top elevation of the biofiltration area mulch, and should be capped with a lockable screw cap. The ends of underdrain pipes not terminating in an observation well/clean-out should also be capped.

Hydraulic Restriction Layer

Lateral infiltration pathways may need to be restricted due to the close proximity of roads, foundations, or other infrastructure. A geomembrane liner, or other equivalent waterproofing, may be placed along the vertical walls to reduce lateral flows. This geomembrane liner must have a minimum thickness of 30 mils and meet the requirements of Table E-12. Generally, waterproof barriers should not be placed on the bottom of the biofiltration unit, as this would prevent incidental infiltration which is important to meeting the required pollutant load reduction.

Table E-12. Geomembrane Liner Specifications for Biofiltration Areas

Parameter	Test Method	Specifications
Material		Nonwoven geomembrane liner
Unit weight		8 oz/yd^3 (minimum)
Filtration rate		0.08 in/sec (minimum)
Puncture strength	ASTM D-751 (Modified)	125 lbs (minimum)
Mullen burst strength	ASTM D-751	400 lb/in^2 (minimum)
Tensile strength	AST D-1682	300 lbs (minimum)
Equiv. opening size	US Standard Sieve	No. 80 (minimum)

Planting/Storage Media

- The planting media placed in the biofiltration area should achieve a long-term, in-place infiltration rate of at least 5 in/hr. Higher infiltration rates of up to 12 in/hr are permissible. The biofiltration soil media must retain sufficient moisture to support vigorous plant growth.
- The planting media mix must consist of 60 to 80 percent sand and 20 to 40 percent compost.
- Sand should be free of wood, waste, coatings such as clay, stone dust, carbonate, or any other deleterious material. All aggregate passing the No. 200 sieve size should be non-plastic. Sand for biofiltration should be analyzed by an accredited laboratory using #200, #100, #40, #30, #16, #8, #4, and 3/8 sieves (ASTM D422 or as approved by the local permitting authority) and meet the following gradations (Note: all sand complying with ASTM C33 for fine aggregate comply with the gradation requirements listed below):

Particle Size (ASTM D422)	% Passing by Weight
3/8 inch	100%
#4	90-100%
#8	70-100%
#16	40-95%
#30	15-70%
#40	5-55%
#110	0-15%
#200	0-5%

Note: The gradation of the sand component of the biofiltration soil media is believed to be a major factor in the infiltration rate of the media mix. If the desired hydraulic conductivity of the biofiltration soil media cannot be achieved within the specified proportions of sand and compost (#2), then it may be necessary to utilize sand at the coarser end of the range specified minimum percent passing.

- Compost should be a well-decomposed, stable, weed-free organic matter source derived from waste materials including yard debris, wood wastes, or other organic material not including manure or biosolids meeting standards developed by the USCC. The product shall be certified through the USCC STA Program (a compost testing and information disclosure program). Compost quality shall be verified via a laboratory analysis to be:
    - Feedstock materials must be specified and include one or more of the following: landscape/yard trimmings, grass clippings, food scraps, and agricultural crop residues.
    - pH between 6.5 and 8.0 (may vary with plant palette)
    - Organic Matter: 35 to 75 percent dry weight basis
    - Carbon and Nitrogen Ratio: 15:1 < C:N < 25:1
    - Maturity/Stability: Compost must have a dark brown color and a soil-like odor. Compost exhibiting a sour or putrid smell, containing recognizable grass or leaves, or is hot (120°F) upon delivery or rewetting is not acceptable.
    - Toxicity: any one of the following measures is sufficient to indicate non-toxicity:
        - NH_4:NH_3 < 3
        - Ammonium < 500 ppm, dry weight basis
        - Seed germination > 80 percent of control
        - Plant trials > 80 percent of control
        - Solvita® > 5 index value
    - Nutrient content:
        - Total Nitrogen content ≥ 0.9 percent preferred
        - Total Boron should be < 80 ppm; soluble boron < 2.5 ppm
    - Salinity: < 6.0 mmhos/cm
    - Compost for biofiltration area should be analyzed by an accredited laboratory using #200, ¼-inch, ½-inch, and 1-inch sieves (ASTM D422) and meet the gradation requirements in the table below:

Particle Size (ASTM D422)	% Passing by Weight
1 inch	99-100
½ inch	90-100
¼ inch	40-90
#200	2-10

Tests should be sufficiently recent to represent the actual material that is anticipated to be delivered to the site. If processes or sources used by the supplier have changed significantly since the most recent testing, new tests should be requested.

The gradation of compost used in biofiltration soil media is believed to play an important role in the saturated infiltration rate of the media. To achieve a higher saturated infiltration rate, it may be necessary to utilize compost at the coarser end of the range (minimum percent passing). The percent passing the #200 sieve (fines) is believed to be the most important factor in hydraulic conductivity.

In addition, coarser compost mix provides more heterogeneity of the biofiltration soil media, which is believed to be advantageous for more rapid development of soil structure needed to support healthy biological processes. This may be an advantage for plant establishment with lower nutrient and water input.

- Biofiltration soil media not meeting the above criteria should be evaluated on a case-by-case basis. Alternative biofiltration soil media must meet the following specifications:

  "Soils for biofiltration facilities must be sufficiently permeable to infiltrate stormwater runoff at a minimum of rate of 5 in/hr during the life of the facility, and provide sufficient retention of moisture and nutrients to support healthy vegetation." The following steps shall be followed by LACDPW to verify that alternative biofiltration soil media mixes meet the specification:

  - Submittals – The applicant must submit to LACDPW for approval:
    - A sample of mixed biofiltration soil media.
    - Certification from the soil supplier or an accredited laboratory that the biofiltration soil media meets the requirements of this specification.
    - Certification from an accredited geotechnical testing laboratory that the biofiltration soil media has an infiltration rate between 5 and 12 in/hr.
    - Organic content test results of the biofiltration soil media. Organic content test shall be performed in accordance with the Testing Methods for the Examination of Compost and Composting (TMECC) 05.07A, "Loss-On-Ignition Organic Matter Method".
    - Organic grain size analysis results of mixed biofiltration soil media performed in accordance with ASTM D422, Standard Test Method for Particle Size Analysis of Soils.
    - A description of the equipment and methods used to mix the sand and compost to produce the biofiltration soil media.
  - The name of the testing laboratory(ies) and the following information:

- Contact person(s)
- Address(es)
- Phone contact(s)
- E-mail address(es)
- Qualifications of laboratory(ies) and personnel including date of current certification by STA, ASTM, or approved equal.

o Biofiltration soils shall be analyzed by an accredited laboratory using #200 and ½-inch sieves (ASTM D422 or as approved by LACDPW), and meet the gradation described in the table below:

Particle Size (ASTM D422)	% Passing by Weight
½ inch	97-100
#200	2-5

- Biofiltration soil media shall be analyzed by an accredited geotechnical laboratory for the following tests:
  - o Moisture – density relationships (compaction tests) must be conducted on biofiltration soil media. Biofiltration soil media for the permeability test shall be compacted to 85 to 90 percent of the maximum dry density (ASTM D1557).
  - o Constant head permeability testing in accordance with ASTM D2434 shall be conducted on a minimum of two samples with a 6-inch mold and vacuum saturation.
- Mulch is recommended for the purpose of retaining moisture, preventing erosion, and minimizing weed growth. Projects subject to the California Model Water Efficiency Landscaping Ordinance (or comparable local ordinance) will be required to provide at least 2 inches of mulch. Aged mulch, also called compost mulch, reduces the ability of weeds to establish, keeps soil moist, and replenishes soil nutrients. Biofiltration areas must be covered with two to four inches (average three inches) of mulch at the start and an annual placement (preferably in June after weeding) of one to two inches of mulch beneath plants.
- The planting media design height must be marked appropriately, such as a collar on the overflow device or with a stake inserted two feet into the planting media and notched, to show biofiltration surface level and ponding level.

Vegetation

Prior to installation, a licensed landscape architect must certify that all plants, unless otherwise specifically permitted, conform to the standards of the current edition of American Standard for Nursery Stock as approved by the American Standards Institute, Inc. All plant grades shall be those established in the current edition of American Standards for Nursery Stock.

- Shade trees must have a single main trunk. Trunks must be free of branches below the following heights:

CALIPER (in)	Height (ft)
1½-2½	5
3	6

- Plants must be tolerant of summer drought, ponding fluctuations, and saturated soil conditions for 96 hours.
- It is recommended that a minimum of three types of tree, shrubs, and/or herbaceous groundcover species be incorporated to protect against facility failure due to disease and insect infestations of a single species.
- Native plant species and/or hardy cultivars that are not invasive and do not require chemical inputs must be used to the maximum extent practicable.

The biofiltration area should be vegetated to resemble a terrestrial forest community ecosystem, which is dominated by understory trees, a shrub layer, and herbaceous ground cover. Select vegetation that:

- Is suited to well-drained soil;
- Will be dense and strong enough to stay upright, even in flowing water;
- Has minimum need for fertilizers;
- Is not prone to pests and is consistent with Integrated Pest Management practices; and
- Is consistent with local water conservation ordinance requirements.

Irrigation System

Provide an irrigation system to maintain viability of vegetation, if applicable. The irrigation system must be designed to local code or ordinance specifications.

Restricted Construction Materials

The use of pressure-treated wood or galvanized metal at or around a biofiltration area is prohibited.

Overflow Device

An overflow device is required at the 18-inch ponding depth. The following, or equivalent, should be provided:

- A vertical PVC pipe (SDR 26) to act as an overflow riser.
- The overflow riser(s) should be eight inches or greater in diameter, so it can be cleaned without damage to the pipe.

- The inlet to the riser should be at the ponding depth (18 inches for fenced biofiltration areas and 6 inches for areas that are not fenced), and be capped with a spider cap to exclude floating mulch and debris. Spider caps should be screwed in or glued (e.g., not removable). The overflow device should convey stormwater runoff in excess of 1.5 times the SWQDv that is not reliably retained on the project site to an approved discharge location (another stormwater quality control measure, storm drain system, or receiving water).

Maintenance Requirements

Maintenance and regular inspections are important for proper function of biofiltration areas. Biofiltration areas require annual plant, soil, and mulch layer maintenance to ensure optimal infiltration, storage, and pollutant removal capabilities. In general, biofiltration maintenance requirements are typical landscape care procedures and include:

- Irrigate plants as needed during prolonged dry periods. In general, plants should be selected to be drought-tolerant and not require irrigation after establishment (two to three years).
- Inspect flow entrances, ponding area, and surface overflow areas periodically, and replace soil, plant material, and/or mulch layer in areas if erosion has occurred. Properly-designed facilities with appropriate flow velocities should not cause erosion except potentially during in extreme events. If erosion occurs, the flow velocities and gradients within the biofiltration area and flow dissipation and erosion protection strategies in the pretreatment area and flow entrance should be reassessed. If sediment is deposited in the biofiltration area, identify the source of the sediment within the tributary area, stabilize the source, and remove excess surface deposits.
- Prune and remove dead plant material as needed. Replace all dead plants, and if specific plants have a high mortality rate, assess the cause and, if necessary, replace with more appropriate species.
- Remove weeds as needed until plants are established. Weed removal should become less frequent if the appropriate plant species are used and planting density is attained.
- Select the proper soil mix and plants for optimal fertility, plant establishment, and growth to preclude the use of nutrient and pesticide supplements. By design, biofiltration facilities are located in areas where phosphorous and nitrogen levels are often elevated such that these should not be limiting nutrients. Addition of nutrients and pesticides may contribute pollutant loads to receiving waters.
- In areas where heavy metals deposition is likely (i.e., tributary areas to industrial, vehicle dealerships/repair, parking lots, roads), replace mulch annually. In areas where metals deposition is less likely (i.e., residential lots), replace or add mulch as needed to maintain a two to three inch depth at least once every two years.

- Analyze soil for fertility and pollutant levels if necessary. Biofiltration soil media are designed to maintain long-term fertility and pollutant processing capability.
- Eliminate standing water to prevent vector breeding.
- Inspect overflow devices for obstructions or debris, which should be removed immediately. Repair or replace damaged pipes upon discovery.
- Inspect, and clean if necessary, the underdrain.

A summary of potential problems that need to be addressed by maintenance activities is presented in Table E-13.

The County requires execution of a maintenance agreement to be recorded by the property owner for the on-going maintenance of any privately-maintained stormwater quality control measures. The property owner is responsible for compliance with the maintenance agreement. A sample maintenance agreement is presented in Appendix H.

Table E-13. Biofiltration Troubleshooting Summary

Problem	Conditions When Maintenance Is Needed	Maintenance Required
Vegetation	Overgrown vegetation	Mow and prune vegetation as appropriate.
	Presence of invasive, poisonous, nuisance, or noxious vegetation or weeds	Remove this vegetation and plant native species as needed.
Trash and Debris	Trash, plant litter, and dead leaves present	Remove and properly dispose of trash and debris.
Irrigation (if applicable)	Not functioning correctly	Check irrigation system for clogs or broken lines and repair as needed.
Inlet/Overflow	Inlet/overflow areas clogged with sediment and/or debris	Remove material.
	Overflow pipe blocked or broken	Repair as needed.
Erosion/Sediment Accumulation	Splash pads or spreader incorrectly placed Presence of erosion or sediment accumulation	Check inlet structure to ensure proper function. Repair, or replace if necessary, the inlet device. Repair eroded areas with gravel as needed. Re-grade the biofiltration area as needed.
Contaminants and Pollution	Any evidence of oil, gasoline, contaminants, or other pollutants	Remove any evidence of visual contamination from floatables such as oil and grease.
Standing water	Standing water observed more than 96 hours after storm event	Inspect, and clean as needed, the underdrain to ensure proper function. Clear clogs as needed. Remove and replace planter media (sand, gravel, topsoil, mulch) and vegetation.

Appendix C:
Modular Wetlands System (MWS) Biofiltration Vaults

Typical MWS Biofiltration Vault details have been provided for this Preliminary LID. Project specific details will be provided during final engineering.

INSTALLATION NOTES

1. CONTRACTOR TO PROVIDE ALL LABOR, EQUIPMENT, MATERIALS AND INCIDENTALS REQUIRED TO OFFLOAD AND INSTALL THE SYSTEM AND APPURTENANCES IN ACCORDANCE WITH THIS DRAWING AND THE MANUFACTURERS SPECIFICATIONS, UNLESS OTHERWISE STATED IN MANUFACTURERS CONTRACT.
2. MANUFACTURER RECOMMENDS A MINIMUM 6"LEVEL ROCK BASE UNLESS SPECIFIED BY THE PROJECT ENGINEER. CONTRACTOR IS RESPONSIBLE TO VERIFY PROJECT ENGINEERS RECOMMENDED BASE SPECIFICATIONS.
3. ALL PIPES MUST BE FLUSH WITH INSIDE SURFACE OF CONCRETE. (PIPES CANNOT INTRUDE BEYOND FLUSH).
4. INVERT OF OUTFLOW PIPE MUST BE FLUSH WITH DISCHARGE CHAMBER FLOOR.
5. ALL GAPS AROUND PIPES SHALL BE SEALED WATER TIGHT WITH A NON-SHRINK GROUT PER MANUFACTURERS STANDARD CONNECTION DETAIL AND SHALL MEET OR EXCEED REGIONAL PIPE CONNECTION STANDARDS.
6. CONTRACTOR RESPONSIBLE FOR INSTALLATION OF ALL RISERS, MANHOLES, AND HATCHES. CONTRACTOR TO GROUT ALL MANHOLES AND HATCHES TO MATCH FINISHED SURFACE UNLESS SPECIFIED OTHERWISE.

GENERAL NOTES

1. MANUFACTURER TO PROVIDE ALL MATERIALS UNLESS OTHERWISE NOTED.
2. ALL DIMENSIONS, ELEVATIONS, SPECIFICATIONS AND CAPACITIES ARE SUBJECT TO CHANGE. FOR PROJECT SPECIFIC DRAWINGS DETAILING EXACT DIMENSIONS, WEIGHTS AND ACCESSORIES PLEASE CONTACT MANUFACTURER.

MWS – Linear

Hybrid Stormwater Filtration System

Save valuable space with small footprint for urban sites.

Improve BMP aesthetics with attractive native and tropical landscape plants.

Reduce lifetime costs with safer and less expensive maintenance

"The MWS – Linear hybrid stormwater treatment system is described as a self contained treatment train. This system utilizes an innovative combination of l treatment processes. Stormwater runoff flows into the system via pipe or curb/grate type catch basin opening. Polluted runoff first encounters a screening device to remove larger pollutants and then enters a hydrodynamic separation chamber which settles out the sediments and larger suspended solids. Next the runoff is treated by a revolutionary filter media, BioMediaGREEN that removes fines and associated pollutants, including bacteria. From there runoff enters of bioretention filter in the form of a subsurface flow vegetated gravel wetland. Within the wetland physical, chemical, and biological mechanisms remove the remaining particulate and dissolved pollutants. The purified runoff leaves the system via the discharge chamber. In the discharge chamber the rate of discharge is controlled by valves set to a desired rate".

Tested Pollutant Removal Efficiencies:

TSS Removal	Dissolved Lead Removal	Dissolved Copper Removal	TPH	E. coli Removal	Turbidity Removal
98%	81%	92%	99%	60.2%	92%

"Nature and Harmony Working Together in Perfect Harmony"

SPECIFICATIONS – MWS- LINEAR

Track Record: The MWS- Linear Hybrid Stormwater Treatment System is manufactured by a company whom is regularly engaged in the engineering design and production of treatment systems for stormwater.

Coverage: The MWS- Linear is designed to treat the water quality volume or water quality flow. For flow based design, high flow bypass is internal, for volume based design, high flow bypass is external and prior to pre-detention system. For offline volume based designs the MWS - Linear has the ability to treat the entire water quality volume when used with pre-storage and properly sized.

Non-Corrosive Materials: The MWS – Linear is designed with non-corrosive materials. All internal piping is SD35 PVC. Catch basin filter components, including mounting hardware, fasteners, support brackets, filtration material, and support frame are constructed of non-corrosive materials (316 stainless steel, and UV protected/marine grade fiberglass). Fasteners are stainless steel. Primary filter mesh is 316 stainless steel welded screens. Filtration basket screens for coarse, medium and fine filtration is ¾" x 1 ¾"expanded, 10 x 10 mesh, and 35 x 35 mesh, respectively. No polypropylene, monofilament netting or fabrics shall be used in this system. Media Protective Panels are constructed of UV protected/marine grade fiberglass. Mounts are constructed of stainless steel. BioMediaGREEN is an inert rock substrate and is non-corrosive. Perimeter filter structure is constructed of lightweight injection molded plastic. Mounting brackets are constructed of SD40 PVC and are mounted with 3/8" diameter stainless steel redheads. Drain down filter cover is constructed of UV protected/marine grade fiberglass and stainless steel hinge and mount.

Weight: Each complete unit weighs approximately 29,000 to 40,000 pounds and requires a boom crane to install. Details of this are provided in the installation section of the MWS-Linear Design Kit.

Transportation: The Modular Wetland System – Linear is designed to be transported on a standard flat bed truck. The unit easily fits on a flat bed truck without the need of special permitting.

Alternative Technology Configurations: The Modular Wetland System – Linear is modular is design. Each module will be up to 22 feet long and 5 feet wide. The system can be made in lengths varying from 13 to 100s of feet long. For lengths longer than 22 feet the system will shipped in modules and assembled on site. The Modular Wetland System – Linear has many alternative configurations. This allows the system to be adapted to many site conditions. Runoff can enter the system through a pipe, and/or a built in curb or grate type opening.

Energy Requirements: The Modular Wetland System – Linear is completely passive and requires no external energy sources.

Buoyancy Issues: Buoyancy is only a an issue when ground water levels rise above the bottom of the Modular Wetland System – Linear's concrete structure. With 8.5 cubic yards of wetland media there is no concern of floatation. As a precaution a footing can also be built into the systems concrete structure.

Durability: The structure of the box will be precast concrete. The concrete will be 28 day compressive strength fc = 5,000 psi. Steel reinforcing will be ASTM A – C857. Structure will support an H20 loading as indicted by AASHTO. The joint between the concrete sections will ship lap and joint sealed with ram-nek. Filter (excluding oil absorbent media) and support structures are of proven durability. The filter and mounting structures are of sufficient strength to support water, sediment, and debris loads when the filter is full, with no slippage, breaking, or tearing. All filters are warranted for a minimum of five (5) years.

Oil Absorbent Media: The MWS – Linear utilizes both physical and biological mechanisms to capture and filter oil and grease. A skimmer and boom system will be positioned on the internal perimeter of the catch basin insert. The primary filtration media, BioMediaGreen, utilized in the perimeter and drain down filters, has excellent hydrocarbon removal abilities. Within the wetland filter biological processes capture and

break down oil and grease. Much of the breakdown and transformation of oil and grease is performed by natural occurring bacteria.

Overflow Protection: The grate and curb type MWS – Linear are designed with an internal bypass consisting of two SD PVC pipes which direct high flows around the perimeter and wetland filter, directly into the discharge chamber. For the volume based vault type configuration, bypass should be located prior to the pre-detention system. For peak flows that exceed internal bypass capacity, external bypass is use.

Filter Bypass: Runoff will bypass filtration (BioMediaGREEN and wetland filter) components of the MWS - Linear. The system will still provide screening and settling during higher flow rates for internally bypassed flows. External bypass will bypass of treatment processes.

Pollutant Removal Efficiency: The MWS - Linear is capable of removing over 90% of the net annual total suspended solids (TSS) load based on a 20-micron particle size. Annual TSS removal efficiency models are based on documented removal efficiency performance from full-scale laboratory tests on BioMediaGreen and quarter-scale laboratory tests on the MWS – Linear flow based system.

POLLUTANT	REMOVAL EFFICIENCY
Trash & Litter	99%
TPH (mg/L)	99%
TSS (mg/L)	98%
E. Coli (MPN/100ml)	60%
Turbidity (NTU)	92%
Dissolved Metals (mg/L)	76%

Sil-Co-Sil 106. Mean particle diameter = 19 microns

Non-Scouring: During heavy storm events the runoff bypasses perimeter and wetland filter components. The system will not re-suspend solids at design flows.

Uniqueness: The Modular Wetland System – Linear is a complete self contained treatment train that incorporates capture, screening, sedimentation, filtration, bioretention, high flow bypass, and flow control into a single modular structure. This system provides four stages of treatment making it the only 4 stage treatment train stormwater filtration system, therefore making it unique to the industry. Other systems do not incorporate all the necessary attributes to make it a complete stormwater management device as with the Modular Wetland System – Linear. Therefore, no equal exists for this system.

Pretreatment & Preconditioning: Since the Modular Wetland System – Linear is a complete capture and treatment train stormwater management system no external pretreatment of preconditioning is necessary.

SPECIFICATIONS – BioMediaGREEN

BioMediaGREEN is a proprietary engineered filter media. Made of a unique combination of the inert naturally occurring material this product is non-combustible and do not pose a fire hazard, stable and non-reactive, and is also biodegradable. It is stable with no known adverse environmental effects.

This product has been tested in long-term carcinogenicity studies [inhalation and intraperitoneal injection (i.p.)] with no significant increase in lung tumors or abdominal tumors. Short-term biopersistent (inhalation and intra-tracheal injection) studies have shown that the products disappear very rapidly from the lung.

In October 2001, IARC classified this product as Group 3, "not classifiable as to its carcinogenicity to humans". The 2001 decision was based on the latest epidemiological studies and animal inhalation studies that show no relation between inhalation exposure and the development of tumors.

The product can typically be disposed of in an ordinary landfill (local regulations may apply). If you are unsure of the regulations, contact your local Public Health Department or the local office of the Environmental Protection Agency (EPA).

Coverage: When properly installed BioMediaGREEN Filter Blocks provide sufficient contact time, at rated flows, of passing contaminate water. The BioMediaGREEN material will capture and retain most pollutants that pass through it. The BioMediaGREEN material is made of a proprietary blend of inert substances. The BioMediaGREEN Filter Blocks can be used in different treatment devices, including but not limited to flume filters, trench drain filters, downspout filters, catch basin inserts, water polishing units, and hydrodynamic separators.

Non-Corrosive Materials: The BioMediaGreen material is made of non-corrosive materials.

Durability: The BioMediaGREEN material has been chosen for its proven durability, with an expected life of 2 plus years. The BioMediaGREEN material is of sufficient strength to support water, sediment, and debris loads when the media is at maximum flow; with no slippage, breaking, or tearing. The BioMediaGREEN material has been tested through rigorous flow and loading conditions.

Oil Absorbent Media: The BioMediaGREEN material has been proven to capture and retain hydrocarbons.

Pollutant Removal Efficiency: The BioMediaGREEN Filter Blocks are designed to capture high levels of Hydrocarbons including but not limited to oils & grease, gasoline, diesel, and PAHs. BioMediaGREEN Filter Blocks have the physical ability to block and filter trash and litter, grass and foliage, sediments, TSS, particulate and dissolved metals, nutrients, and bacteria.

BioMediaGREEN technology is based on a proprietary blend of synthetic inert natural substances aimed at removal of various stormwater pollutants. BioMediaGREEN was created to have a very porous structure capable of selectively removing pollutants while

allowing high flow through rates for water. As pollutants are captured by its structure, BioMediaGREEN captures most pollutants and maintains porosity and filtering capabilities.

Field and laboratory tests have confirmed the BioMediaGREEN capability to capture large percentage of TSS, hydrocarbons, nutrients, and heavy metals. Microbial reduction efficiency will vary depending on colony size, flow rates and site specific conditions.

POLLUTANT	REMOVAL EFFICIENCY
Oil & Grease (mg/L)	90%
TPH (mg/L)	99%
TSS (mg/L)	85%
Turbidity (NTU)	99%
Total Phosphorus (mg/L)	69.6%
Dissolved Metals (mg/L)	75.6%

Sil-Co-Sil 106. Mean particle diameter = 19 microns

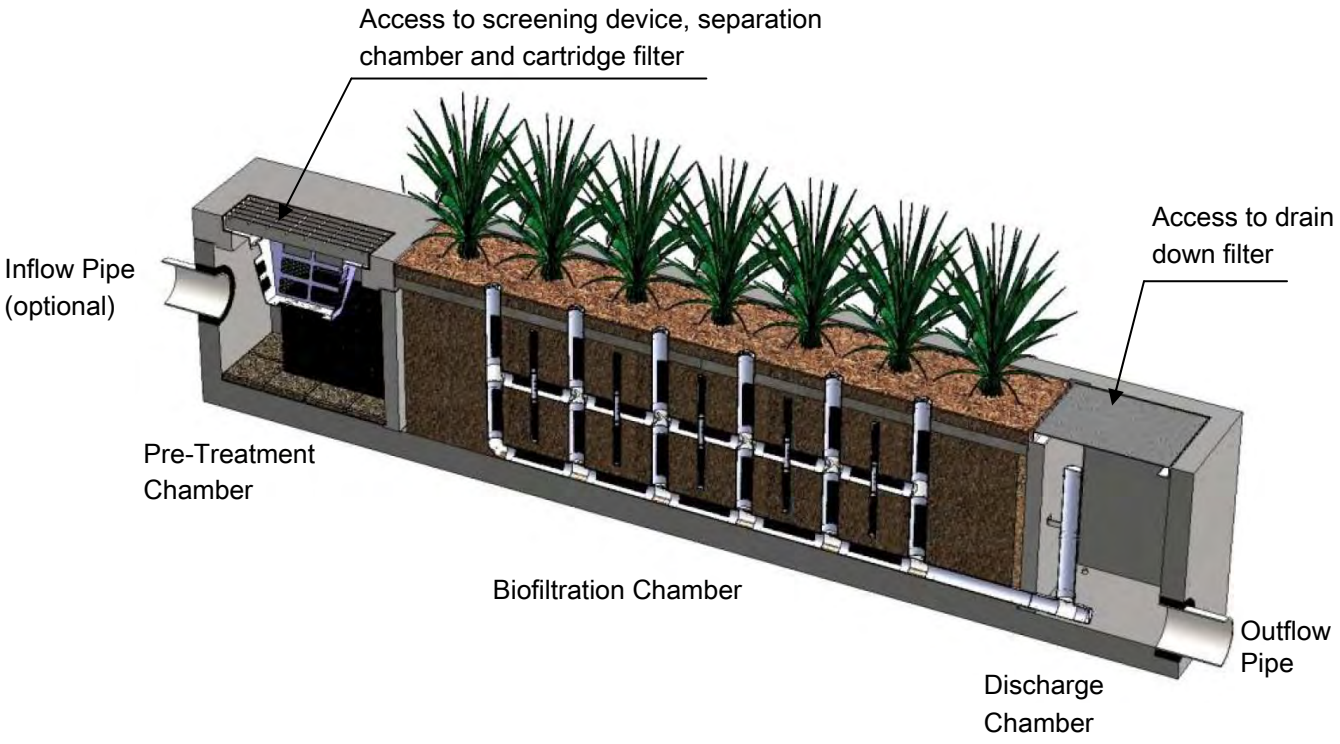
Replacement: Removal and replacement of the blocks is simple. Remove blocks from filtration system. Replace with new block of equal size.

Maintenance Guidelines for Modular Wetland System - Linear

Maintenance Summary

- Remove Trash from Screening Device – average maintenance interval is 6 to 12 months.
  - (*5 minute average service time*).
- Remove Sediment from Separation Chamber – average maintenance interval is 12 to 24 months.
  - (*10 minute average service time*).
- Replace Cartridge Filter Media – average maintenance interval 12 to 24 months.
  - (*10-15 minute per cartridge average service time*).
- Replace Drain Down Filter Media – average maintenance interval is 12 to 24 months.
  - (*5 minute average service time*).
- Trim Vegetation – average maintenance interval is 6 to 12 months.
  - (*Service time varies*).

System Diagram



Maintenance Procedures

Screening Device

1. Remove grate or manhole cover to gain access to the screening device in the Pre-Treatment Chamber. Vault type units do not have screening device. Maintenance can be performed without entry.
2. Remove all pollutants collected by the screening device. Removal can be done manually or with the use of a vacuum truck. The hose of the vacuum truck will not damage the screening device.
3. Screening device can easily be removed from the Pre-Treatment Chamber to gain access to separation chamber and media filters below. Replace grate or manhole cover when completed.

Separation Chamber

1. Perform maintenance procedures of screening device listed above before maintaining the separation chamber.
2. With a pressure washer spray down pollutants accumulated on walls and cartridge filters.
3. Vacuum out Separation Chamber and remove all accumulated pollutants. Replace screening device, grate or manhole cover when completed.

Cartridge Filters

1. Perform maintenance procedures on screening device and separation chamber before maintaining cartridge filters.
2. Enter separation chamber.
3. Unscrew the two bolts holding the lid on each cartridge filter and remove lid.
4. Remove each of 4 to 8 media cages holding the media in place.
5. Spray down the cartridge filter to remove any accumulated pollutants.
6. Vacuum out old media and accumulated pollutants.
7. Reinstall media cages and fill with new media from manufacturer or outside supplier. Manufacturer will provide specification of media and sources to purchase.
8. Replace the lid and tighten down bolts. Replace screening device, grate or manhole cover when completed.

Drain Down Filter

1. Remove hatch or manhole cover over discharge chamber and enter chamber.
2. Unlock and lift drain down filter housing and remove old media block. Replace with new media block. Lower drain down filter housing and lock into place.
3. Exit chamber and replace hatch or manhole cover.

Maintenance Notes

1. Following maintenance and/or inspection, it is recommended the maintenance operator prepare a maintenance/inspection record. The record should include any maintenance activities performed, amount and description of debris collected, and condition of the system and its various filter mechanisms.

2. The owner should keep maintenance/inspection record(s) for a minimum of five years from the date of maintenance. These records should be made available to the governing municipality for inspection upon request at any time.

3. Transport all debris, trash, organics and sediments to approved facility for disposal in accordance with local and state requirements.

4. Entry into chambers may require confined space training based on state and local regulations.

5. No fertilizer shall be used in the Biofiltration Chamber.

6. Irrigation should be provided as recommended by manufacturer and/or landscape architect. Amount of irrigation required is dependent on plant species. Some plants may require irrigation.

Maintenance Procedure Illustration

Screening Device

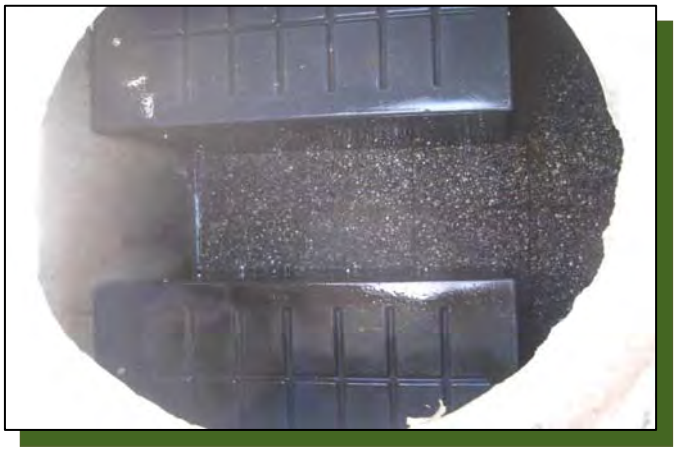
The screening device is located directly under the manhole or grate over the Pre-Treatment Chamber. It's mounted directly underneath for easy access and cleaning. Device can be cleaned by hand or with a vacuum truck.

Separation Chamber

The separation chamber is located directly beneath the screening device. It can be quickly cleaned using a vacuum truck or by hand. A pressure washer is useful to assist in the cleaning process.

Cartridge Filters

The cartridge filters are located in the Pre-Treatment chamber connected to the wall adjacent to the biofiltration chamber. The cartridges have removable tops to access the individual media filters. Once the cartridge is open media can be easily removed and replaced by hand or a vacuum truck.



Drain Down Filter

The drain down filter is located in the Discharge Chamber. The drain filter unlocks from the wall mount and hinges up. Remove filter block and replace with new block.

Trim Vegetation

Vegetation should be maintained in the same manner as surrounding vegetation and trimmed as needed. No fertilizer shall be used on the plants. Irrigation per the recommendation of the manufacturer and or landscape architect. Different types of vegetation requires different amounts of irrigation.

Inspection Checklist

Modular Wetland System Type (Curb, Grate or UG Vault): _____ Size (22', 14' or etc.): _____

Structural Integrity:	**Yes**	**No**	**Comments**
Damage to pre-treatment access cover (manhole cover/grate) or cannot be opened using normal lifting pressure?			
Damage to discharge chamber access cover (manhole cover/grate) or cannot be opened using normal lifting pressure?			
Does the MWS unit show signs of structural deterioration (cracks in the wall, damage to frame)?			
Is the inlet/outlet pipe or drain down pipe damaged or otherwise not functioning properly?			
Working Condition:			
Is there evidence of illicit discharge or excessive oil, grease, or other automobile fluids entering and clogging the unit?			
Is there standing water in inappropriate areas after a dry period?			
Is the filter insert (if applicable) at capacity and/or is there an accumulation of debris/trash on the shelf system?			
Does the depth of sediment/trash/debris suggest a blockage of the inflow pipe, bypass or cartridge filter? If yes, specify which one in the comments section. Note depth of accumulation in in pre-treatment chamber.			Depth:
Does the cartridge filter media need replacement in pre-treatment chamber and/or discharge chamber?			Chamber:
Any signs of improper functioning in the discharge chamber? Note issues in comments section.			
Other Inspection Items:			
Is there an accumulation of sediment/trash/debris in the wetland media (if applicable)?			
Is it evident that the plants are alive and healthy (if applicable)? Please note Plant Information below.			
Is there a septic or foul odor coming from inside the system?			

Waste:	**Yes**	**No**
Sediment / Silt / Clay		
Trash / Bags / Bottles		
Green Waste / Leaves / Foliage

Appendix E:
Catch Basin Cleaning

OPERATION & MAINTENANCE PLAN
FOR FILTER INSERT

The maintenance program will include the following key components:

1. **REGULAR SWEEPING AND REMOVAL OF DEBRIS:**
   Vehicle parking lot will be swept on a regular basis. Sediment and debris (litter, leaves, papers and cans, etc.) within the area, especially around the drainage inlet, will be collected and removed. The frequency of sweeping will be based on the amount of sediment and debris generated.

2. **REGULAR INSPECTIONS:**
   The catch basin, downspout, or trench drain filter insert will be inspected on a regular basis. The frequency of inspection will be based on pollutant loading, amount of debris, leaves, etc., and amount of runoff. At a minimum, there will be three inspections per year.

3. **CONDUCT OF THE VISUAL INSPECTION:**
   a. Broom sweep around the inlet and remove the inlet grate.
   b. Inspect the filter liner for serviceability. If called for, the filter body will be replaced.
   c. Check the condition of the adsorbent pouches and visually check the condition of the enclosed adsorbent. If the surface of the granules is more than 50% coated with a dark gray or black substance, the pouches will be replaced with new ones.
   d. Check for loose or missing nuts (on some models) and gaps between the filter and the inlet wall, which would allow bypass of the filter during low flows.
   e. The filter components will be replaced in the inlet and the grate replaced.

4. **CLEANING OUT THE FILTER INSERT:**
   Regardless of the model of filter insert, the devices must be cleaned out on a recurring basis. The manufacturer recommends at least three cleanings per year – more in high exposure areas. For the Flo-Gard+Plus filters, the filter must be cleaned when the solids level reaches close to the fullel tip.
   a. The Standard Filter, in most cases, can be cleaned out by removing the device from the inlet and dumping the contents into a DOT approved drum for later disposal. If the oil-absorbant pouches need to be changed, the time to change them is immediately after dumping and before the filter is replaced in the inlet.
   b. Because of weight, method of installation and so forth, some filter inserts will be cleaned with the aid of a vactor truck. If necessary, the oil-absorbant pouches will be changed after the pollutants have been removed and as the filter is being returned to service.

5. **MAINTENANCE LOG:**
   Keep a log of all inspections and maintenance performed on the catch basins, trench drains, and filter inserts. Keep this log on-site.

Dear Ms. Prijatel:

Presented herein is Alta California Geotechnical, Inc.'s (Alta) geotechnical investigation report for the proposed residential development located at 930 West Compton Boulevard, in the City of Compton, California. This report is based on a recent subsurface investigation conducted by Alta, laboratory testing and review of the referenced reports.

Also included in this report are:

- Discussion of the site geotechnical conditions;
- Recommendations for remedial and site grading, including unsuitable soil removals;
- Geotechnical site construction recommendations;
- Preliminary foundation design parameters.

If you have any questions or should you require any additional information, please contact the undersigned at (951) 509-7090. Alta appreciates the opportunity to provide geotechnical consulting services for your project.

Sincerely,
Alta California Geotechnical, Inc.

1.0 INTRODUCTION

The following report presents Alta's findings, conclusions, and geotechnical recommendations for the proposed residential development located at 930 West Compton Boulevard, in the City of Compton, California.

1.1 Purpose

The purpose of this report is to examine the existing onsite geotechnical conditions and assess the impacts that the geotechnical conditions may have on the proposed development. The property is depicted on the enclosed Plate 1. This report is suitable for use in developing grading plans and engineer's cost estimates.

1.2 Scope of Work

Alta's *Scope of Work* for this geotechnical investigation included the following:

- Review of the referenced literature, maps, reports and aerial photos (Appendix A);
- Site geologic mapping;
- Excavating, logging, and sampling five (5) hollow-stem auger borings to a maximum depth of 51.5-feet below the existing surface (Appendix B);
- Conducting laboratory testing on samples obtained during our investigation (Appendix C);
- Performing an infiltration study on an additional boring, five (5) feet in depth, to provide an assessment of the infiltration characteristics of the onsite soil and their impact on storm water disposal;
- Conducting a liquefaction analysis;
- Evaluating engineering geologic and geotechnical engineering data, including laboratory data, to develop recommendations for site remedial grading, import soil, foundations and utilities;
- Preparing this report and accompanying exhibits.

1.3 Report Limitations

The conclusions and recommendations presented in this report are based on the field and laboratory information generated during this investigation, and a review of the referenced reports. The information contained in this report is intended to be used for development of grading plans and preliminary construction cost estimates.

2.0 PROJECT DESCRIPTION

2.1 Site Location and Existing Conditions

The property consists of a rectangular-shaped, 2.45± -acre parcel located at 930 West Compton Boulevard, in the City of Compton, California. Currently, the site is a vacant lot and is relatively flat. The site is bounded to the north by West Compton Boulevard, to the east by Kemp Avenue, to the south by 151st Street, and to the west by Dwight Avenue.

A review of aerial photos (Historic Aerials, 2019) indicates that the lot was vacant up until the 1970s where it was graded for the construction of a hospital. The hospital was demolished around 2004 and the lot has remained vacant since.

2.2 Proposed Development

It is our understanding that site will be developed into a residential development to support 24 homes with associated improvements. Alta anticipates that conventional cut-and-fill grading techniques will be used to develop the site. This grading will support residential structures consisting of wood frame construction with shallow foundations and reinforced concrete slabs-on-grade, and associated improvements. Design cuts and fills onsite are anticipated to be five feet or less.

3.0 SITE INVESTIGATION

3.1 Current Subsurface Investigation

Alta conducted a subsurface investigation on April 18, 2019 consisting of the excavation, logging and select sampling of five (5) hollow-stem auger borings up to a maximum depth of 51.5 feet below the existing ground surface and the installation of one (1) five-foot deep well for infiltration testing. The locations of the exploratory excavations are shown on Plate 1 and the boring logs are presented in Appendix B.

Laboratory testing was performed on bulk and ring samples obtained during the field investigation. A brief description of the laboratory test procedures and the test results are presented in Appendix C.

3.2 Infiltration Testing

It is Alta's understanding that the site may utilize infiltration systems for storm water disposal. Details of the system are not known at this time.

Infiltration testing was undertaken using one, five (5) foot-deep boring (P-1) as shown on Plate 1. The testing was performed on April 19, 2019 in general conformance with the County of Los Angeles for WQMP. The test well was presoaked for 24 hours prior to testing and the water level readings were recorded every 30 minutes until the readings stabilized.

The data was then adjusted to provide an infiltration rate utilizing the Porchet Method. The resulting infiltration rate for P-1 is 0.13 inches per hour, with no factor of safety, as summarized in Table 3-1. Recommendations for infiltration BMP design are presented in Section 6.3.

Table 3-1 Summary of Infiltration Testing (No Factor of Safety)	
Test Designation	P-1
Approximate Depth of Test	5.0 ft
Final Time Interval	30 minutes
Radius of Test Hole	4 inches
Tested Infiltration Rate	0.13 inches/hr

4.0 GEOLOGIC CONDITIONS

4.1 Geologic and Geomorphic Setting

Regionally, the subject site is located in the Peninsular Ranges geomorphic province, which characterizes the southwest portion of southern California where major right-lateral active fault zones predominately trend northwest-southeast. The Peninsular Ranges province is composed of plutonic and metamorphic rock, with lesser amounts of Tertiary volcanic and sedimentary rock, Quaternary drainage in-fills and sedimentary veneers.

4.2 Stratigraphy

Based on Alta's review of geologic literature and our subsurface investigation, the project site is underlain by undocumented artificial fills and young Quaternary alluvium. The geologic units are briefly described below.

4.2.1 Artificial Fill (Map symbol af)

Artificial fill was found in the upper two (2) to five (5) feet. It consists of light to dark brown, silty clay in a dry to moist, stiff condition, with some areas containing concrete cobbles up to 11 inches in diameter.

4.2.2 Young Quaternary Alluvium (Map symbol Qya)

Young Quaternary alluvium underlies the artificial fill which consist of light brown to brown, tan with some orange mottling, silty clay, clayey silt, sandy silt, sand, and silt in a moist, stiff to very stiff and medium

dense to dense condition. The unit was logged to a maximum depth of 51.5 feet below the ground surface.

4.3 Geologic Structure

4.3.1 Tectonic Framework

Jennings and Bryant (2010) defined eight structural provinces within California that have been classified by predominant regional fault trends and similar fold structure. These provinces are in turn divided into blocks and sub-blocks that are defined by "major Quaternary faults." These blocks and sub-blocks exhibit similar structural features. Within this framework the site is located within Structural Province I, which is controlled by the dominant northwest trend of the San Andreas Fault and is divided into two blocks, the Coast Range Block and the Peninsular Range Block. The Peninsular Range Block, on which the site is located, is characterized by a series of parallel, northwest trending faults that exhibit right lateral dip-slip movement. These faults are terminated by the Transverse Range block to the north and extend southward to the Baja Peninsula. These northwest trending faults divide the Peninsular Range block into eight sub-blocks. The site is located on the Santa Ana sub-block, which is bound on the east by the Whittier-Elsinore fault zone and on the west by Newport-Inglewood fault zone.

4.3.2 Regionally Mapped Active Faults

Several large, active fault systems, including the Whittier-Elsinore, the Newport-Inglewood, and the San Andreas, occur in the region surrounding the site. These fault systems have been studied extensively and in a large part control the geologic structure of southern California.

4.3.3 Geologic Structure

Based upon our site investigation and literature review, the onsite sediments are of Quaternary age, and are not fractured, folded, or faulted.

4.4 Groundwater

Groundwater was not encountered to a depth of 51.5 feet below the ground surface during our subsurface investigation. Based on state-provided information, the historic-high groundwater is ten (10) feet below the ground surface (CDMG, 1998).

4.5 Earthquake Hazards

The subject site is located in southern California, which is a tectonically active area. The type and magnitude of seismic hazards affecting a site are dependent on the distance to the causative fault and the intensity and magnitude of the seismic event. The seismic hazard may be primary, such as surface rupture and/or ground shaking, or secondary, such as liquefaction and/or ground lurching.

4.5.1 Local and Regional Faulting

The site is located on the Santa Ana sub-block, approximately 1.3 miles east of the Newport-Inglewood fault zone, 4.9 miles south west of the Puente Hills fault zone, 9.1 miles north 0f the Palos Verdes fault zone, 11.3 miles south of the Elysian Park fault zone, and 13.1 miles southwest of the Whittier-Elsinore fault zone.

4.5.2 Seismicity

Ground shaking hazards caused by earthquakes along other active regional faults do exist. The 2016 California Building Code requires use-modified spectral accelerations and velocities for most structural designs.

Seismic design parameters using soil profile types identified in the 2016 California Building Code are presented in Section 7.3.

4.5.3 Surface Rupture

Active faults are not known to exist within the project and a review of Special Publication 42 indicates the site is not within a California State designated Alquist-Priolo earthquake fault zone. Accordingly, the potential for fault surface rupture on the subject site is very low.

4.5.4 Liquefaction

Seismic agitation of relatively loose saturated sands, silty sands, and some silts can result in a buildup of pore pressure. If the pore pressure exceeds the overburden stresses, a temporary quick condition known as liquefaction can occur. Liquefaction effects can manifest in several ways including: 1) loss of bearing; 2) lateral spread; 3) dynamic settlement; and 4) flow failure. Lateral spreading has typically been the most damaging mode of failure.

In general, the more recent that a sediment has been deposited, the more likely it will be susceptible to liquefaction. Other factors that must be considered are groundwater, confining stresses, relative density, and the intensity and duration of seismically-induced ground shaking.

Groundwater was not encountered during our subsurface investigation at a depth approximately 51.5 feet below the ground surface. The regional groundwater map indicates that the historic-high groundwater level is 10 feet below the ground surface (CDMG, 1997). The site is located in a liquefaction zone per the seismic hazard maps (CDMG, 1997).

Alta performed a liquefication analysis utilizing data from the hollow-stem auger borings and laboratory test results to analyze the liquefaction

potential of the young Quaternary alluvium. A description of Alta's analysis and calculations are presented in Appendix D of this report. A groundwater level of 10 feet below existing ground surface was assumed. The results of our findings are discussed below under the headings of the specific types of liquefaction which can be manifested during seismic shaking.

- **Loss of Bearing:**

  Liquefaction can potentially cause foundation bearing failure due to ground softening and near-failure in bearing. Based on the removal recommendations presented in this report, Alta anticipates that the potential for loss of bearing will be minimal.

- **Lateral Spreading:**

  The lateral displacement of surficial blocks of sediment can occur as a result of liquefaction in a subsurface layer. The most pervasive forms of lateral spreading typically involve sites located near a "free-face" (large slopes, channels, etc.), however, it has been noted that lateral spreading can occur on sites with gently sloping (1% or more) ground, such as the subject site.

  Determination of the potential for lateral spread is based on the presence of continuous potentially liquefiable soil layers underneath the structures, the presence of lateral confinement, and various analyses such as empirical modeling. Bartlett, Hansen and Youd (2002) states that surface manifestation of lateral spread is typically limited to sites with liquefiable soils within 10 meters (32 feet) of grade, and that sites underlain by soils with $(N1)_{60}$ values 15 and greater do not experience significant displacements from earthquakes with magnitudes less than 8.

  There were no layers within 32 feet of the existing ground surface with $(N1)_{60}$ values less than 15 that are susceptible to liquefaction. As such, it is our opinion that the potential for lateral spread to occur onsite is considered minimal upon the completion of remedial grading.

- **Settlement:**

  Settlement due to seismic shaking can occur as a result of both liquefaction of saturated sediments or rearrangement of dry sand

particles. Our liquefaction analysis was performed utilizing SPT from the hollow-stem auger borings and laboratory test results to analyze the potential amount of settlement. A description of Alta's analysis and calculations are presented in Appendix D of this report. The calculations indicated that the potential amount of dynamic settlement is less than 1-inch. Dynamic settlement design recommendations are presented in Section 7.1.

- **Flow Failure:**

  Due to the relatively flat nature of the site, and the relatively horizontal deposition of the underlying deposits, the potential for flow failure onsite is considered low.

4.5.4 Dry Sand Settlement

Dry sand settlement is the process of settlement of the ground surface during a seismic event in sand layers. Based on the remedial grading recommendations, the density and fines content of the underlying young alluvium, dry sand settlement is not anticipated to be a significant constraint.

5.0 ENGINEERING PROPERTIES AND ANALYSIS

5.1 Materials Properties

Presented herein is a general discussion of the engineering properties of the onsite materials that will be encountered during construction of the proposed project. Descriptions of the soil (Unified Soil Classification System) and in-place moisture/density results are presented on the boring logs in Appendix B.

5.1.1 Excavation Characteristics

Based on the data provided from the subsurface investigation, it is our opinion that the majority of the onsite materials possess favorable excavation characteristics such that conventional earthmoving equipment can be utilized.

5.1.2 Compressibility

The onsite artificial fill and upper portions of the young alluvium are considered compressible and unsuitable to support the proposed improvements. Recommended removal depths are presented in Section 6.1.2.

5.1.3 Moisture

The moisture content of the artificial fill and upper portions of young alluvium that will require removal and recompaction as discussed in Section 6.1.2 is relatively high, as shown on the boring logs in Appendix B. These soils may need to be dried or mixed with drier materials before placing them as engineered fill, as noted in Section 6.2.6.

5.1.4 Hydro-Consolidation

Hydro-consolidation is the effect of introducing water into soil that is prone to collapse. Upon loading and initial wetting, the soil structure and apparent strength are altered resulting in almost immediate settlement. That settlement can have adverse impacts on engineered structures, particularly in areas where it is manifested differentially. Differential settlements are typically associated with differential wetting, irregularities in the subsurface soil conditions, and/or irregular loading patterns.

Based on our laboratory testing (Appendix C), the potential for hydro-collapse onsite is minimal and should be within foundation tolerances upon the completion of the recommended unsuitable soils removals.

5.1.5 Expansion Potential

Expansion index testing was performed on a sample taken during our subsurface investigation. Based on the results, it is anticipated that the

majority of materials onsite are "medium" to "high" in expansion potential (51≤EI≤130, Appendix C) when tested per ASTM D: 4829.

5.1.6 Earthwork Adjustments

The values presented in Table 5-1 are deemed appropriate for estimating purposes and may be used in an effort to balance earthwork quantities. As is the case with every project, contingencies should be made to adjust the earthwork balance when grading is in-progress and actual conditions are better defined.

TABLE 5-1
Earthwork Adjustment Factors

Geologic Unit	Adjustment Factor Range	Average
Artificial Fill/Young Quaternary Alluvium	Shrink 4% to 6%	5%

5.1.7 Chemical Analyses

Chemical testing was performed on a sample of material underlying the proposed site. Soluble sulfate test results indicate that the soluble sulfate concentrations of the soils tested are classified as negligible (Class S0) per ACI 318-14.

Negligible chloride levels were detected in the onsite soils (Appendix C). Resistivity testing conducted as part of this investigation, indicates that the soils are "severely corrosive" to buried metals (per Romanoff, 1989). Additional discussions on corrosion are presented in Section 7.9. Corrosion tests results are presented in Appendix C.

5.2 Engineering Analysis

Presented below is a general discussion of the engineering analysis methods that were utilized to develop the conclusions and recommendations presented in this report.

5.2.1 Bearing Capacity and Lateral Earth Pressures

Ultimate bearing capacity values were obtained using the graphs and formula presented in NAVFAC DM-7.1. Allowable bearing was determined by applying a factor of safety of at least 3 to the ultimate bearing capacity. Static lateral earth pressures were calculated using Rankine methods for active and passive cases. If it is desired to use Coulomb forces, a separate analysis specific to the application can be conducted.

6.0 CONCLUSIONS AND RECOMMENDATIONS

Based on Alta's findings during our subsurface investigation, the laboratory test results, our staff's previous experience in the area, it is Alta's opinion that the development of the site is feasible from a geotechnical perspective. Presented below are recommendations that should be incorporated into site development and construction plans.

6.1 Remedial Grading Recommendations

All grading shall be accomplished under the observation and testing of the project geotechnical consultant in accordance with the recommendations contained herein and the City of Compton criteria.

6.1.1 Site Preparation

Vegetation, construction debris, and other deleterious materials are unsuitable as structural fill material and should be disposed of off-site prior to commencing grading/construction. Any septic tanks, seepage pits or wells should be abandoned as per the County of Los Angeles Department of Health Services.

Existing concrete from the demolition of the hospital should be removed prior to the placement of engineered fill. The demolished concrete may be incorporated into compacted, engineered fills after it is crushed to a

maximum size of six (6) inches. Prior to placement as engineered fill, any protruding steel rebar should be cut from the concrete pieces and disposed of offsite.

6.1.2 Unsuitable Soil Removals

The artificial fill and the upper portions of the young alluvium are compressible and as such, are not suitable to support the proposed structures. Therefore, it is anticipated that, on average, the upper three (3) to six (6) feet of existing soils will require removal and recompaction, extending a minimum of five (5) feet horizontally outside the structures. This recommended removal combined with the foundation recommendations presented in Section 7.1 should provide suitable support for the proposed structures.

For fill areas in streets, in general, a minimum removal and recompaction of the upper two (2) feet of natural soils is recommended (all artificial fill should be removed and recompacted). For cuts greater than two (2) feet in street areas, removals are not required. For cuts less than two (2) feet, the two (2) foot removal and recompaction applies.

The Project Geotechnical Consultant should observe the removal bottom prior to placing fill. If unsuitable soils such as undocumented artificial fill are exposed upon the completion of the removals recommended above, additional removals may be required.

Material removed as part of the unsuitable soil removals can be used as artificial fill, provided it is free of deleterious materials.

6.2 General Earthwork Recommendations

6.2.1 Compaction Standards

All fill and processed natural ground shall be compacted to a minimum relative compaction of 90 percent, as determined by ASTM Test Method: D-1557. Fill material should be moisture conditioned to optimum moisture or above, and as generally discussed in Alta's Earthwork Specification Section presented in Appendix F. Compaction shall be achieved with the use of sheepsfoot rollers or similar kneading type equipment.

6.2.2 Groundwater/Seepage

It is anticipated that groundwater will not be encountered during construction. It is possible that perched water conditions could be encountered depending on the time of year construction occurs.

6.2.3 Documentation of Removals

All removal/over-excavation bottoms should be observed and approved by the project Geotechnical Consultant prior to fill placement. Consideration should be given to surveying the removal bottoms and undercuts after approval by the geotechnical consultant and prior to the placement of fill. Staking should be provided in order to verify undercut locations and depths.

6.2.4 Treatment of Removal Bottoms

At the completion of removals/over-excavation, the exposed removal bottom should be ripped to a minimum depth of eight (8) inches, moisture-conditioned to above optimum moisture content and compacted in-place to the project standards.

6.2.5 Fill Placement

After removals, scarification, and compaction of in-place materials are completed, additional fill may be placed. Fill should be placed in eight-inch bulk maximum lifts, moisture conditioned to optimum moisture content or above, compacted and tested as grading/construction progresses until final grades are attained.

6.2.6 Moisture Content

The moisture content of the upper in-situ soils is above optimum, as shown on the boring logs in Appendix B. The contractor shall take this into account when determining the most appropriate method for fill placement.

6.2.7 Mixing

Mixing of materials may be necessary to prevent layering of different soil types and/or different moisture contents. The mixing should be accomplished prior to and as part of the compaction of each fill lift.

6.2.8 Import Soils

Import soils, if necessary, should consist of clean, structural quality, compactable materials similar to the on-site soils and should be free of trash, debris or other objectionable materials. The project Geotechnical Consultant should be notified not less than 72 hours in advance of the locations of any soils proposed for import. Import sources should be sampled, tested, and approved by the project Geotechnical Consultant at the source prior to the importation of the soils to the site. The project Civil Engineer should include these requirements on plans and specifications for the project.

6.2.9 Utility Trenches

6.2.9.1 Excavation

Utility trenches should be supported, either by laying back excavations or shoring, in accordance with applicable OSHA standards. In general, existing site soils are classified as Soil Types "B" and "C" per OSHA standards. Upon completion of the recommended removals and re-compaction, the artificial fill will be classified as Soil Type "B". It is anticipated that perched water will not be encountered during excavation. The Project Geotechnical Consulting should be consulted if geologic conditions vary from what is presented in this report.

6.2.9.2 Backfill

Trench backfill should be compacted to at least 90 percent of maximum dry density as determined by ASTM D-1557. Onsite soils will not be suitable for use as bedding material but will be suitable for use in backfill provided oversized materials are removed. No surcharge loads should be imposed above excavations. This includes spoil piles, lumber, concrete trucks, or other construction materials and equipment. Drainage above excavations should be directed away from the banks. Care should be taken to avoid saturation of the soils. Compaction should be accomplished by mechanical means. Jetting of native soils will not be acceptable.

Under-slab trenches should also be compacted to project specifications. If select granular backfill (SE > 30) is used, compaction by flooding will be acceptable.

6.2.10 Backcut Stability

Temporary backcuts, if required during unsuitable soil removals, should be made no steeper than 1:1 without review and approval of the geotechnical consultant. Flatter backcuts may be necessary where geologic conditions dictate and where minimum width dimensions are to be maintained.

Care should be taken during remedial grading operations in order to minimize risk of failure. Should failure occur, complete removal of the disturbed material will be required.

In consideration of the inherent instability created by temporary construction backcuts for removals, it is imperative that grading schedules are coordinated to minimize the unsupported exposure time of these excavations. Once started, these excavations and subsequent fill operations should be maintained to completion without intervening delays imposed by avoidable circumstances. In cases where five-day workweeks comprise a normal schedule, grading should be planned to avoid exposing at-grade or near-grade excavations through a non-work weekend. Where improvements may be affected by temporary instability, either on or offsite, further restrictions such as slot cutting, extending work days, implementing weekend schedules, and/or other requirements considered critical to serving specific circumstances may be imposed.

6.3 Storm Water Infiltration Systems

Municipalities have been increasing the requirement for onsite storm water infiltration, rather than allowing water to enter storm drain systems. From a geotechnical perspective, allowing storm water to infiltrate the onsite soil in concentrated areas increases the potential for settlement, liquefaction, and water-related damage to structures/improvements, such as wet slabs or pumping subgrade, and should be avoided where possible. If infiltration systems are required on this site, care should be taken in designing systems that control the storm water as much as possible.

Preliminary infiltration testing was conducted at the site as part of this investigation, and the methodology is discussed in 3.2. The resulting infiltration rate for P-1 was calculated to be 0.13-inches per hour, at approximately 5-feet below the existing ground surface. The results do not include a factor of safety. Given the characteristics of the underlying soil, in our opinion, deeper testing would not result in higher rates.

Groundwater was not encountered during our subsurface investigation at a depth of 51.5 feet below the existing ground surface. The historic-high groundwater is 10 feet below the ground surface (CDMG, 1998).

Given the low infiltration rate, high in-situ moisture content and fine-grained nature of the underlying soil, infiltration WQMP systems are likely not feasible at the subject site. The Project Geotechnical Consultant should review the final WQMP design prior to construction.

6.4 Boundary Conditions

The site is bounded to the north by West Compton Boulevard, to the east by Kemp Avenue, to the south by 151st Street, and to the west by Dwight Avenue. Construction of retaining/screen walls in these areas may require additional

geotechnical recommendations concerning unsuitable soil removals and foundation design parameters as the design progresses.

7.0 DESIGN CONSIDERATIONS

7.1 Structural Design

It is anticipated that multi-story, wood-framed residential structures with slab on-grade and shallow foundations will be constructed. Upon the completion of rough grading, finish grade samples should be collected and tested in order to provide specific recommendations as they relate to individual building pads. These test results and corresponding design recommendations should be presented in a final rough grading report. Final slab and foundation design recommendations should be made based upon specific structure sitings, loading conditions, and as-graded soil conditions.

It is anticipated that the majority of onsite soils will possess "medium" to "high" expansion potential when tested in general accordance with ASTM Test Method D: 4829. Due to the expansion potential, it is anticipated that post-tensioned slabs will be utilized for the project.

7.1.1 Foundation Design

Foundations may be preliminary designed based on the values presented in Table 7-1 below.

Table 7-1
Foundation Design Parameters*

Allowable Bearing	2000 lbs/ft^2 (assuming a minimum embedment depth and width of 12 inches)
Lateral Bearing	250 lbs/ft^2 at a depth of 12 inches plus 250 lbs/ft^2 for each additional 12 inches of embedment to a maximum of 2000 lbs/ft^2.
Sliding Coefficient	0.30
Settlement	Static Settlement - 0.5 inches in 40 feet Dynamic Settlement - 0.5 inches in 40 feet

*These values may be increased as allowed by Code to resist transient loads such as wind or seismic. Building code and structural design considerations may govern depth and reinforcement requirements and should be evaluated.

7.1.2 Post-Tensioned Slabs/Foundation Design Recommendations

Post-tensioned slabs for the project may be designed utilizing the parameters presented in Tables 7-1 and 7-3. The parameters presented herein are based on methodology provided in the Design of Post-Tensioned Slabs-On-Ground, Third Edition, by the Post-Tensioning Institute, in accordance with the 2016 CBC.

TABLE 7-3
POST-TENSION SLAB DESIGN PARAMETERS

Category	Expansion Potential	Minimum Embedment*	Edge Lift		Center Lift	
			Em (ft)	Ym (inch)	Em (ft)	Ym (inch)
II	Medium	18 inches	5.0	1.10	9.0	0.46
III	High	24 inches	4.5	1.58	9.0	0.65
Slab Subgrade Moisture						
Category II	Minimum 120% of optimum moisture to a depth of 12 inches prior to pouring concrete					
Category III	Minimum 130% of optimum moisture to a depth of 18 inches prior to pouring concrete					
Embedment*						
The minimum footing embedments presented herein are based on expansion indexes. The structural engineer should determine minimum embedments based on the number of floors supported by the footings, the structural loading, and the requirements of the latest California Building Code. If mat slabs are utilized, the minimum embedment depths can be reduced to 12-inches for Category II and 18-inches for Category III.						
Moisture Barrier						
A moisture barrier should be provided in accordance with the recommendations presented in Section 7.2						
The parameters presented herein are based on procedures presented in the Design of Post-Tensioned Slabs-On-Ground, Third Edition. No corrections for vertical barriers at the edge of the slab, or for adjacent vegetation have been assumed. The design parameters are based on a Constant Suction Value of 3.9 pF.						

7.2 Moisture Barrier

A moisture and vapor retarding system should be placed below the slabs-on-grade in portions of the structure considered to be moisture sensitive and should be capable of effectively preventing the migration of water and reducing the transmission of water vapor to acceptable levels. Historically, a 10-mil plastic

membrane, such as Visqueen, placed between two to four inches of clean sand, has been used for this purpose. The use of this system or other systems can be considered, at the discretion of the designer, provided the system reduces the vapor transmission rates to acceptable levels.

7.3 Seismic Design

The site has been identified as "D" site class in accordance with section 1613.3.2 of the CBC 2016. Utilizing this information, the computer program ATC Hazards by Location and ASCE 7-10 criterion, the spectral response accelerations that can be utilized for the project are presented on Figure 1. These parameters should be verified by the structural engineer. Additional parameters should be determined by the structural engineer based on the Occupancy Category of the proposed structures.

7.4 Fence and Garden Walls

Block walls, if used, should be embedded a minimum of 2 feet below the lowest adjacent grade. Construction joints (not more than 20 feet apart) should be included in the block wall construction. Side yard walls should be structurally separated from the rear yard wall.

7.5 Footing Excavations

Soils from the footing excavations should not be placed in slab-on-grade areas unless properly compacted and tested. The excavations should be cleaned of all loose/sloughed materials and be neatly trimmed at the time of concrete placement. The Project Geotechnical Consultant should observe the footing excavations prior to the placement of concrete to determine that the excavations are founded in suitably compacted material.

7.6 Retaining Wall Design

Retaining walls should be founded on engineered fill and should be backfilled with granular soils that allow for drainage behind the wall. Based on the fine-grained nature of the soils onsite, it is anticipated suitable free-draining backfill material will need to be imported to the site. Foundations may be designed in accordance with the recommendations presented in Table 7-1, above. Unrestrained walls, free to horizontally move 0.0005H (for dense cohesionless backfill), may be designed to resist lateral pressures imposed by a fluid with a unit weight determined in accordance with the Table 7-3 below. The table also presents design parameters for restrained (at-rest) retaining walls. These parameters may be used to design retaining walls that may be considered as restrained due to the method of construction or location (corner sections of unrestrained retaining walls).

TABLE 7-3
Equivalent Fluid Pressures for 90% Compacted Fill (Select Material)

Backfill	Active Pressure (psf/ft)	At-Rest Pressure (psf/ft)
Level	35	55

Per the requirements of the 2016 CBC, the seismic force acting on the retaining walls with backfill exceeding 6-feet in height may be resolved utilizing the formula $21H^2$ lb/lineal ft (H=height of the wall). This force acts at approximately 0.6H above the base of the wall. The seismic value can be converted as required by the retaining wall engineer. Retaining walls should be designed in general accordance with Section 1807A.2 of the 2016 CBC.

- Restrained retaining walls should be designed for "at-rest" conditions.
- The design loads presented in the above table are to be applied on the retaining wall in a horizontal fashion and as such friction between wall and retained soils should not be allowed in the retaining wall analyses.

- Additional allowances should be made in the retaining wall design to account for the influence of construction loads, temporary loads, and possible nearby structural footing loads.
- Select backfill should be granular, structural quality backfill with a Sand Equivalent of 20 or better and an ASCE Expansion Index of 20 or less. The backfill must encompass the full active wedge area. The upper one foot of backfill should be comprised of native on-site soils (see Plate A).
- The wall design should include waterproofing (where appropriate) and backdrains or weep holes for relieving possible hydrostatic pressures. The backdrain should be comprised of a 4-inch perforated PVC pipe in a 1 ft. by 1 ft., ¾-inch gravel matrix, wrapped with a geofabric. The backdrain should be installed with a minimum gradient of 2 percent and should be outletted to an appropriate location.
- No backfill should be placed against concrete until minimum design strengths are achieved.

It should be noted that the allowable bearing and lateral bearing values presented in Table 7-1 are based on level conditions at the toe. Modified design parameters can be presented for retaining walls with sloping condition at the toe. Other conditions should be evaluated on a case by case basis.

7.7 Exterior Slabs and Walkways

Exterior concrete slabs and walkways should be designed and constructed in consideration of the following recommendations.

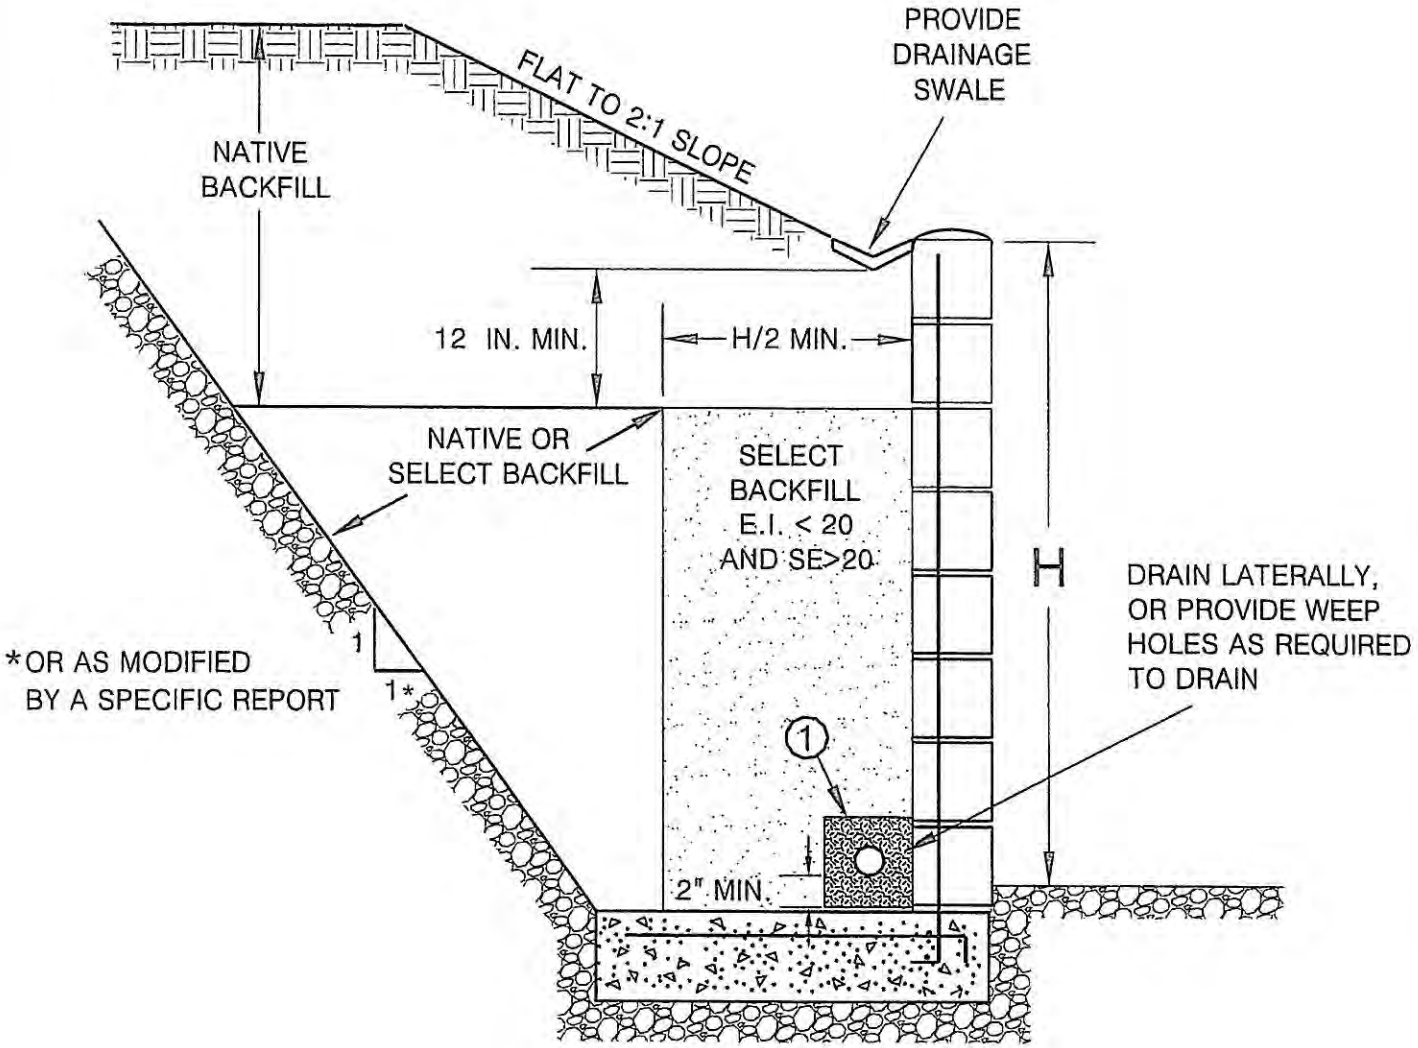
7.7.1 Subgrade Compaction

The subgrade below exterior concrete slabs should be compacted to a minimum of 90 percent relative compaction as determined by ASTM Test Method: D 1557.

7.7.2 Subgrade Moisture

The subgrade below concrete slabs should be moisture conditioned to a minimum of 120 percent of optimum moisture (medium expansion) or a

RETAINING WALL BACKFILL DETAIL



(1)

PIPE: 4-INCH PERFORATED PVC, SCHEDULE 40, SDR35 OR APPROVED ALTERNATE MINIMUM 8 PERFORATIONS (1/4-IN. DIA.) PER LINEAL FT. IN BOTTOM HALF OF PIPE

ROCK: MINIMUM VOLUME OF 1 CU. FT. OF 3/4-IN. MAX. ROCK PER. LINEAL FOOT OF PIPE, OR APPROVED ALTERNATE

FILTER FABRIC: MIRAFI 140 FILTER FABRIC OR APPROVED EQUIVALENT

minimum of 130 percent of optimum moisture (high expansion) prior to concrete placement.

7.7.3 Concrete Slab Thickness

Concrete flatwork and driveways should be designed utilizing four-inch minimum thickness.

7.7.4 Concrete Slab Reinforcement

Utilization of reinforcement for flatwork and driveways is subject to a cost/benefit analysis. Reinforcement will decrease the amount of cracking that may occur in flatwork, however, planning for occasional repairs may be more cost effective. Utilizing closely spaced control joints is likely more cost-effective than utilizing reinforcement. The majority of the soils onsite are classified as medium in expansion potential with possible amounts of high expansive soil. Consideration should be given to reinforcing flatwork with irregular (non-square/rectangular) shapes or flatwork underlain by medium or high expansive soils. Given the expansion potential, consideration should be given to reinforcing concrete flatwork with a minimum of 6x6-W1.4xW1.4 welded wire mesh.

7.7.5 Control Joints

Weakened plane joints should be installed on walkways at intervals of approximately eight feet (maximum) or less. Exterior slabs should be designed to withstand shrinkage of the concrete.

7.8 Concrete Design

As stated in Section 5.1.7, negligible concentrations of sulfates were detected in the onsite soils. Therefore, the use of sulfate resistant concrete is not required per ACI 318-14 at this time. Post-grading conditions should be evaluated, and final recommendations made at that time.

7.9 Corrosion

Based on preliminary testing, the onsite soils are corrosive to buried metal objects. Buried ferrous metals should be protected against the effects of corrosive soils in accordance with the manufacturer's recommendations. Typical measures may include using non-corrosive backfill, protective coatings, wrapping, plastic pipes, or a combination of these methods. A corrosion engineer should be consulted if specific design recommendations are required by the improvement designer.

Per ACI 318-14, an exposure class of C1 would be applicable to metals encased in concrete (rebar in footings) due to being exposed to moisture from surrounding soils. Per Table 19.3.2.1 of ACI 318-14, the requirements for concrete with an exposure class of C1 are a minimum compressive strength of 2500 psi and a maximum water-soluble chloride ion content in concrete of 0.30 (percent by weight of cement).

7.10 Pavement Design

Pavement sections for the proposed streets shall be designed based on laboratory testing conducted on samples taken from the soil subgrade. Preliminarily, based on an assumed R-Value of 10, the pavement may be designed utilizing the sections presented in Table 7-4. These sections should be verified upon the completion of grading, based on R-Value testing. The ultimate pavement section design for public streets is under the City of Compton's purview.

Table 7-4 Preliminary Pavement Sections		
Traffic Index	Pavement Section Options OR	
5.0	3-inch AC on 10-inch AB	4-inch AC on 7-inch AB
5.5	3-inch AC on 11-inch AB	4-inch AC on 8.5-inch AB
6.0	3.5-inch AC on 11.5-inch AB	4-inch AC on 10.5-inch AB
AC-Asphalt Concrete AB-Caltrans Class II Base		

Construction of the streets should be accomplished in accordance with the current criteria of the City of Compton. Prior to the placement of base material, the subgrade should be suitably moisture conditioned, processed and compacted to a minimum 95 percent of the laboratory maximum density (ASTM: D 1557) to at least twelve (12) inches below subgrade. After subgrade compaction, the exposed grade should then be "proof"-rolled with heavy equipment to ensure the grade does not "pump" and is verified as non-yielding. Aggregate base material should be placed on the compacted subgrade and compacted in-place to a minimum 95 percent of the laboratory standard obtained per ASTM: D 1557.

8.0 LOT MAINTENANCE

Ongoing maintenance of the improvements is essential to the long-term performance of structures. The following recommendations should be implemented.

8.1 Lot Drainage

Roof, pad and lot drainage should be collected and directed away from structures and slopes and toward approved disposal areas. Design fine grade elevations should be maintained through the life of the structure or if design fine grade elevations are altered, adequate area drains should be installed in order to provide rapid discharge of water, away from structures and slopes. Owners should be made aware that they are responsible for maintenance and cleaning of

all drainage terraces, down drains, and other devices that have been installed to promote structure and slope stability.

8.2 Burrowing Animals

Residents or owners should undertake a program for the elimination of burrowing animals.

9.0 FUTURE PLAN REVIEWS

This report represents a geotechnical review of the site. As the project design for the project progresses, site specific geologic and geotechnical issues should be considered in the design and construction of the project. Consequently, future plan reviews may be necessary. These reviews may include reviews of:

- Grading Plans
- Foundation Plans
- Utility Plans

These plans should be forwarded to the project Geotechnical Consultant for review.

10.0 CLOSURE

10.1 Geotechnical Review

For the purposes of this report, multiple working hypotheses were established for the project, utilizing the available data and the most probable model is used for the analysis. Future information collected during the proposed grading operations is intended to evaluate the hypothesis and as such, some of the assumptions summarized in this report may need to be changed. Some modifications of the grading recommendations may become necessary, should the conditions encountered in the field differ from the conditions hypothesized in this report.

Plans and sections of the project specifications should be reviewed by Alta to evaluate conformance with the intent of the recommendations contained in this

report. If the project description or final design varies from that described herein, Alta must be consulted regarding the applicability of the recommendations contained herein and whether any changes are required. Alta accepts no liability for any use of its recommendations if the project description or final design varies and Alta is not consulted regarding the alterations.

10.2 Limitations

This report is based on the following: 1) the project as presented on the attached plan; 2) the information obtained from Alta's laboratory testing included herein; and 3) from the information presented in the referenced reports. The findings and recommendations are based on the results of the subsurface investigation, laboratory testing, and office analysis combined with an interpolation and extrapolation of conditions between and beyond the subsurface excavation locations. However, the materials adjacent to or beneath those observed may have different characteristics than those observed, and no precise representations are made as to the quality or extent of the materials not observed. The results reflect an interpretation of the direct evidence obtained. Work performed by Alta has been conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the geotechnical profession currently practicing in the same locality under similar conditions. No other representation, either expressed or implied, and no warranty or guarantee is included or intended.

The recommendations presented in this report are based on the assumption that an appropriate level of field review will be provided by a geotechnical consultant who is familiar with the design and site geologic conditions. That field review shall be sufficient to confirm that geotechnical and geologic conditions exposed during grading are consistent with the geologic representations and corresponding recommendations presented in this report.

The conclusions and recommendations included in this report are applicable to the specific design of this project as discussed in this report. They have no applicability to any other project or to any other location and any and all subsequent users accept any and all liability resulting from any use or reuse of the data, opinions, and recommendations without the prior written consent of Alta.

Alta has no responsibility for construction means, methods, techniques, sequences, procedures, safety precautions, programs in connection with the construction, acts or omissions of the CONTRACTOR or any other person performing any of the construction, or for the failure of any of them to carry out the construction in accordance with the final design drawings and specifications.

APPENDIX B

Subsurface Investigation

APPENDIX B

Subsurface Investigation

Alta's subsurface investigation consisted of excavating, logging, and sampling five (5) hollow-stem auger borings. Details of the subsurface investigation are presented in Table B. The approximate locations of the exploratory excavations are shown on Plate 1 and the Geotechnical Logs are attached.

TABLE B
SURFACE INVESTIGATION DETAILS

Equipment	Range of Depths	Sampling Methods	Sample Locations
Hollow-stem auger	Up to 51.5 feet	1. Ring Samples 2. Bulk Samples	1. Ring-Select Depths 2. Bulk-Select Depths

UNIFIED SOIL CLASSIFICATION SYSTEM

Major Divisions		grf	ltr	Description
Coarse Grained Soils More than 50% retained on No. 200 sieve	Gravel and Gravelly Soils More than 50% of coarse fraction retained on No,. 4 sieve		GW	Well-graded gravels or gravel sand mixtures, little or no fines
			GP	Poorly-graded gravels or gravel sand mixture, little or no fines
			GM	Silty gravels, gravel-sand-silt mixtures
			GC	Clayey gravels, gravel-sand-clay mixtures
	Sand and Sandy Soils More than 50% of coarse fraction passes on No,. 4 sieve		SW	Well-graded sands or gravelly sands, little or no fines
			SP	Poorly-graded sands or gravelly sands, little or no fines
			SM	Silty sands, sand-silt mixtures
			SC	Clayey sands, and-clay mixtures

Major Divisions		grf	ltr	
Fine Grained Soils More than 50% passes on No. 200 sieve	Silts And Clays LL,<50		ML	Inorganic silts and very fine sands, rock flour, silty or clayey fine sands or clayey silts with slight plasticity
			CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays
			OL	Organic silts and organic silt-clays of low plasticity
	Silts And Clays LL,<50		MH	Inorganic silts, micaceous or diatomaceous fine or silty soils, elastic silts
			VH	Inorganic clays of high plasticity, fat clays
			OH	Organic clays of medium to high plasticity
Highly Organic Soils			PT	Peat and other highly organic soils

BOUNDARY CLASSIFICATION: Soils possessing characteristics of two groups are designated by combinations of group symbols.

APPENDIX C

Laboratory Testing

LABORATORY TESTING

The following laboratory tests were performed on a representative sample in accordance with the applicable latest standards or methods from the ASTM, California Building Code (CBC) and California Department of Transportation.

Classification

Soils were classified with respect to the Unified Soil Classification System (USCS) in accordance with ASTM D-2487 and D-2488.

Particle Size Analysis

Modified hydrometer testing was conducted to aid in classification of the soil. The results of the particle size analysis are presented in Table C.

Maximum Density/Optimum Moisture

The maximum dry density and optimum moisture content of one representative bulk sample was evaluated in accordance with ASTM D-1557. The results are summarized in Table C.

Expansion Index Tests

One (1) expansion index test was performed to evaluate the expansion potential of typical on-site soil. Testing was carried out in general conformance with ASTM Test Method D-4829. The results are presented in Table C.

Consolidation Tests

Consolidation testing was performed on two (2) relatively "undisturbed" soil samples at their natural moisture content in accordance with procedures outlined in ASTM D-2435. The samples were placed in a consolidometer and loads were applied incrementally in geometric progression. The samples (2.42-inches in diameter and 1-inch in height) were permitted to consolidate under each load increment until the slope of the characteristic linear secondary compression portion of the thickness versus log of time plot was apparent. The percent consolidation for each load cycle was recorded as the ratio of the amount of vertical

compression to the original 1-inch height. The consolidation test results are shown on Plates C-1 and C-2.

Atterberg Limits

Atterberg limit testing of two samples was performed by Alta. The results of these tests are presented on Table C.

Chemical Analyses

Chemical testing of selected samples was performed by Alta. The results of these tests are presented in Table C.

Liquefaction Analysis

APPENDIX D

LIQUEFACTION ANALYSIS

A liquefaction analysis was performed for the site based on SPT data gained from the hollow stem auger drilling. The Ishihara/Yoshimine method to analyze dynamic settlement for the SPT data. The calculations used the following constants: 0.65g for site acceleration, 7.1 for the magnitude of the earthquake, and a groundwater depth of 10 feet below existing grade. A factor of safety of 1.3 was utilized. The results are presented on Plate D-1 through D-5.

APPENDIX E

Maintenance Considerations

MAINTENANCE AND IMPROVEMENT CONSIDERATIONS

General

Owners purchasing property must assume a certain degree of responsibility for improvements and for maintaining conditions around their home. Of primary importance from a geotechnical standpoint are maintaining drainage patterns and minimizing the soil moisture variation below all improvements. Such design, construction and owner maintenance provisions may include:

- Employing contractors for improvements who design and build in recognition of local building codes and specific site soils conditions.
- Establishing and maintaining positive drainage away from all foundations, walkways, driveways, patios, and other improvements.
- Avoiding the construction of planters adjacent to structural improvements. Alternatively, planter sides/bottoms can be sealed with an impermeable membrane and drained away from the improvements via subdrains into approved disposal areas.
- Sealing and maintaining construction/control joints within concrete slabs and walkways to reduce the potential for moisture infiltration into the subgrade soils.
- Utilizing landscaping schemes with vegetation that requires minimal watering. Watering should be done in a uniform manner, as equally as possible on all sides of the foundation, keeping the soil "moist" but not allowing the soil to become saturated.
- Maintaining positive drainage away from structures and providing roof gutters on all structures with downspouts that are designed to carry roof runoff directly into area drains or discharged well away from the foundation areas.
- Avoiding the placement of trees closer to the proposed structures than a distance of one-half the mature height of the tree.
- Observation of the soil conditions around the perimeter of the structure during extremely hot/dry or unusually wet weather conditions so that modifications can be made in irrigation programs to maintain relatively uniform moisture conditions.

Sulfates

Owners should be cautioned against the import and use of certain inorganic fertilizers, soil amendments, and/or other soils from offsite sources in the absence of specific information relating to their chemical composition. Some fertilizers have been known to leach sulfate compounds into soils and increase the sulfate concentrations to potentially detrimental levels.

Site Drainage

- The owners should be made aware of the potential problems that may develop when drainage is altered through construction of hardscape improvements. Ponded water, drainage over the slope face, leaking irrigation systems, overwatering, or other conditions which could lead to ground saturation must be avoided.
- No water should be allowed to flow over the slopes. No alteration of pad gradients should be allowed that would prevent pad and roof runoff from being directed to approved disposal areas.
- Drainage patterns have been established at the time of the fine grading should be maintained throughout the life of the structure. No alterations to these drainage patterns should be made unless designed by qualified professionals in compliance with local code requirements and site-specific soils conditions.

Slope Drainage

- Residents should be made aware of the importance of maintaining and cleaning all interceptor ditches, drainage terraces, down drains, and any other drainage devices, which have been installed to promote slope stability.
- Subsurface drainage pipe outlets may protrude through slope surfaces and/or wall faces. These pipes, in conjunction with the graded features, are essential to slope and wall stability and must be protected in-place. They should not be altered or damaged in any way.

Planting and Irrigation of Slopes

- Seeding and planting of the slopes should be planned to achieve, as rapidly as possible, a well-established and deep-rooted vegetal cover requiring minimal watering.
- It is the responsibility of the landscape architect to provide such plants initially and of the residents to maintain such planting. Alteration of such a planting scheme is at the resident's risk.
- The resident is responsible for proper irrigation and for maintenance and repair of properly installed irrigation systems. Leaks should be fixed immediately.
- Sprinklers should be adjusted to provide maximum uniform coverage with a minimum of water usage and overlap. Overwatering with consequent wasteful runoff and serious ground saturation must be avoided.
- If automatic sprinkler systems are installed, their use must be adjusted to account for seasonal and natural rainfall conditions.

Burrowing Animals

- Residents must undertake a program to eliminate burrowing animals. This must be an ongoing program in order to promote slope stability.

Owner Improvement

Owner improvements (pools, spas, patio slabs, retaining walls, planters, etc.) should be designed to account for the terrain of the project, as well as expansive soil conditions and chemical characteristics. Design considerations on any given lot may need to include provisions for differential bearing materials, ascending/descending slope conditions, bedrock structure, perched (irrigation) water, special geologic surcharge loading conditions, expansive soil stresses, and long-term creep/settlement.

All owner improvements should be designed and constructed by qualified professionals utilizing appropriate design methodologies, which account for the on-site soils and geologic conditions. Each lot and proposed improvement should be evaluated on an individual basis.

Setback Zones

Manufactured slopes maybe subject to long-term settlement and creep that can manifest itself in the form of both horizontal and vertical movement. These movements typically are produced as a result of weathering, erosion, gravity forces, and other natural phenomenon. A setback adjacent to slopes is required by most building codes, including the California Building Code. This zone is intended to locate and support the residential structures away from these slopes and onto soils that are not subject to the potential adverse effects of these natural phenomena.

The owner may wish to construct patios, walls, walkways, planters, swimming pools, spas, etc. within this zone. Such facilities may be sensitive to settlement and creep and should not be constructed within the setback zone unless properly engineered. It is suggested that plans for such improvements be designed by a professional engineer who is familiar with grading ordinances and design and construction requirements. In addition, we recommend that the designer and contractor familiarize themselves with the site specific geologic and geotechnical conditions on the specific lot.

APPENDIX F

Earthwork Specifications

ALTA CALIFORNIA GEOTECHNICAL, INC.
EARTHWORK SPECIFICATIONS

These specifications present the generally accepted standards and minimum earthwork requirements for the development of the project. These specifications shall be the project guidelines for earthwork except where specifically superseded in preliminary geology and soils reports, grading plan review reports or by the prevailing grading codes or ordinances of the controlling agency.

A. GENERAL

1. The Contractor shall be responsible for the satisfactory completion of all earthwork in accordance with the project plans and specifications.

2. The project Geotechnical Engineer and Engineering Geologist, or their representatives, shall provide observation and testing services, and Geotechnical consultation for the duration of the project.

3. All clearing, grubbing, stripping and site preparation for the project shall be accomplished by the Contractor to the satisfaction of the Geotechnical Engineer/Engineering Geologist.

4. It is the Contractor's responsibility to prepare the ground surface to receive fill to the satisfaction of the Geotechnical Engineer and to place, spread, mix, moisture condition, and compact the fill in accordance with the job specifications and as required by the Geotechnical Engineer. The Contractor shall also remove all material considered by the Geotechnical Engineer to be unsuitable for use in the construction of engineered fills.

5. The Contractor shall have suitable and sufficient equipment in operation to handle the amount of fill being placed. When necessary, equipment will be shut down temporarily in order to permit the proper preparation of fills.

B. PREPARATION OF FILL AREAS

1. Excessive vegetation and all deleterious material should be disposed of offsite as required by the Geotechnical Engineer.

   Existing fill, soil, alluvium or rock materials determined by the Geotechnical Engineer as being unsuitable for placement in compacted fills shall be removed and hauled from the site. Where applicable, the Contractor may obtain the

approval of the Soils Engineer and the controlling authorities for the project to dispose of the above described materials, or a portion thereof, in designated areas onsite.

After removal of the deleterious materials have been accomplished, earth materials deemed unsuitable in their natural, in-place condition, shall be removed as recommended by the Geotechnical Engineer/Engineering Geologist.

2. Upon achieving a suitable bottom for fill placement, the exposed removal bottom shall be disced or bladed by the Contractor to the satisfaction of the Geotechnical Engineer. The prepared ground surfaces shall then be brought to the specified moisture content mixed as required, and compacted and tested as specified. In localities where it is necessary to obtain the approval of the controlling agency prior to placing fill, it will be the Contractor's responsibility to contact the proper authorities to visit the site.

3. Any underground structure such as cesspools, cisterns, mining shafts, tunnels, septic tanks, wells, pipelines or other structures not located prior to grading are to be removed or treated in a manner prescribed by the Geotechnical Engineer and/or the controlling agency for the project.

C. **ENGINEERED FILLS**

1. Any material imported or excavated on the property may be utilized as fill, provided the material has been determined to be suitable by the Geotechnical Engineer. Deleterious materials shall be removed from the fill as directed by the Geotechnical Engineer.

2. Rock or rock fragments less than twelve inches in the largest dimension may be utilized in the fill, provided they are not placed in concentrated pockets and the distribution of the rocks is approved by the Geotechnical Engineer.

3. Rocks greater than twelve inches in the largest dimension shall be taken offsite, or placed in accordance with the recommendations of the Geotechnical Engineer in areas designated as suitable for rock disposal.

4. All materials to be used as fill, shall be tested in the laboratory by the Geotechnical Engineer. Proposed import materials shall be approved by the Geotechnical Engineer 48 hours prior to importation.

5. The fill materials shall be placed by the Contractor in lifts, that when compacted, shall not exceed six inches. Each lift shall be spread evenly and shall be

thoroughly mixed to achieve a near uniform moisture condition and a uniform blend of materials.

All compaction shall be achieved at or above the optimum moisture content, as determined by the applicable laboratory standard. The Contractor will be notified if the fill materials are too wet or too dry to achieve the required compaction standard.

6. When the moisture content of the fill material is below the limit specified by the Geotechnical Engineer, water shall be added and the materials shall be blended until a uniform moisture content, within specified limits, is achieved. When the moisture content of the fill material is above the limits specified by the Geotechnical Engineer, the fill materials shall be aerated by discing, blading, mixed with dryer fill materials, or other satisfactory methods until the moisture content is within the specified limits.

7. Each fill lift shall be compacted to the minimum project standards, in compliance with the testing methods specified by the controlling governmental agency, and in accordance with recommendations of the Geotechnical Engineer.

   In the absence of specific recommendations by the Geotechnical Engineer to the contrary, the compaction standard shall be the most recent version of ASTM:D 1557.

8. Where a slope receiving fill exceeds a ratio of five-horizontal to one-vertical, the fill shall be keyed and benched through all unsuitable materials into sound bedrock or firm material, in accordance with the recommendations and approval of the Geotechnical Engineer.

9. Side hill fills shall have a minimum key width of 15 feet into bedrock or firm materials, unless otherwise specified in the soil report and approved by the Geotechnical Engineer in the field.

10. Drainage terraces and subdrainage devices shall be constructed in compliance with the ordinances of the controlling governmental agency and/or with the recommendations of the Geotechnical Engineer and Engineering Geologist.

11. The Contractor shall be required to maintain the specified minimum relative compaction out to the finish slope face of fill slopes, buttresses, and stabilization fills as directed by the Geotechnical Engineer and/or the governing agency for the project. This may be achieved by either overbuilding the slope and cutting

back to the compacted core; by direct compaction of the slope face with suitable equipment; or by any other procedure which produces the required result.

12. The fill portion of fill-over-cut slopes shall be properly keyed into rock or firm material; and the fill area shall be stripped of all soil or unsuitable materials prior to placing fill.

    The design cut portion of the slope should be made first and evaluated for suitability by the Engineering Geologist prior to placement of fill in the keyway above the cut slope.

13. Pad areas in cut or natural ground shall be approved by the Geotechnical Engineer. Finished surfaces of these pads may require scarification and recompaction, or over excavation as determined by the Geotechnical Engineer.

D. CUT SLOPES

1. The Engineering Geologist shall observe all cut slopes and shall be notified by the Contractor when cut slopes are to be started.

2. If, during the course of grading, unforeseen adverse or potentially adverse geologic conditions are encountered, the Engineering Geologist and Soil Engineer shall investigate, analyze and make recommendations to remediate these problems.

3. Non-erodible interceptor swales shall be placed at the top of cut slopes that face the same direction as the superjacent, prevailing drainage.

4. Unless otherwise specified in specific geotechnical reports, no cut slopes shall be excavated higher or steeper than that allowed by the ordinances of controlling governmental agencies.

5. Drainage terraces shall be constructed in compliance with the ordinances of the controlling governmental agencies, and/or in accordance with the recommendations of the Geotechnical Engineer or Engineering Geologist.

E. GRADING CONTROL

1. Fill placement shall be observed and tested by the Geotechnical Engineer and/or his representative during grading.

   Field density tests shall be made by the Geotechnical Engineer and/or his representative to evaluate the compaction and moisture compliance of each fill lift. Density tests shall be conducted at intervals not to exceed two feet of fill

height. Where sheepsfoot rollers are used, the fill may be disturbed to a depth of several inches. Density determinations shall be taken in the compacted material below the disturbed surface at a depth determined by the Geotechnical Engineer or his representative.

2. Where tests indicate that the density of any layer of fill, or portion thereof, is below the required relative compaction, or improper moisture content is in evidence, that particular layer or portion thereof shall be reworked until the required density and/or moisture content has been attained. Additional fills shall not be placed over an area until the previous lift of fill has been tested and found to meet the density and moisture requirements for the project and the previous lift is approved by the Geotechnical Engineer.

3. When grading activities are interrupted by heavy rains, fill operations shall not be resumed until field observations and tests by the Geotechnical Engineer indicate the moisture content and density of the fill are within the specified limits.

4. During construction, the Contractor shall properly grade all surfaces to maintain good drainage and prevent the ponding of water. The Contractor shall take remedial action to control surface water and to prevent erosion of graded areas until such time as a permanent drainage and erosion devices have been installed.

5. Observation and testing by the Geotechnical Engineer and/or his representative shall be conducted during filling and compacting operations in order that he will be able to state in his opinion that all cut and filled areas are graded in accordance with the approved specifications.

6. Upon the completion of grading activities and after the Geotechnical Engineer and Engineering Geologist have finished their observations of the work, final reports shall be submitted. No further excavation or fill placement shall be undertaken without prior notification of the Geotechnical Engineer and/or Engineering Geologist.

F. **FINISHED SLOPES**

All finished cut and fill slopes shall be planted and irrigated and/or protected from erosion in accordance with the project specifications, governing agencies, and/or as recommended by a landscape architect.

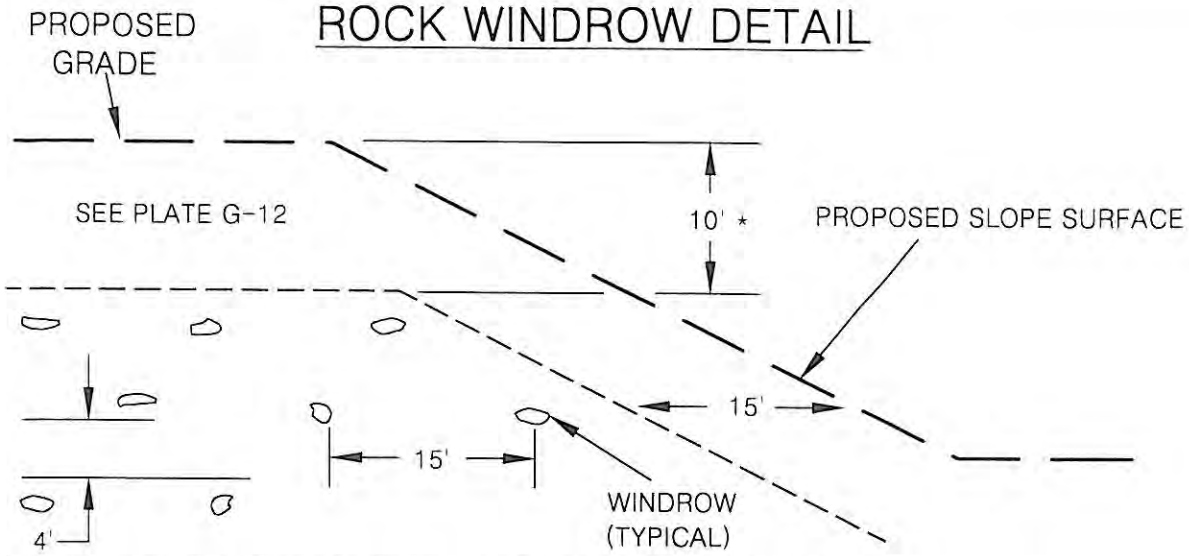
OBSERVATION TESTING AND APPROVAL PROCEDURES

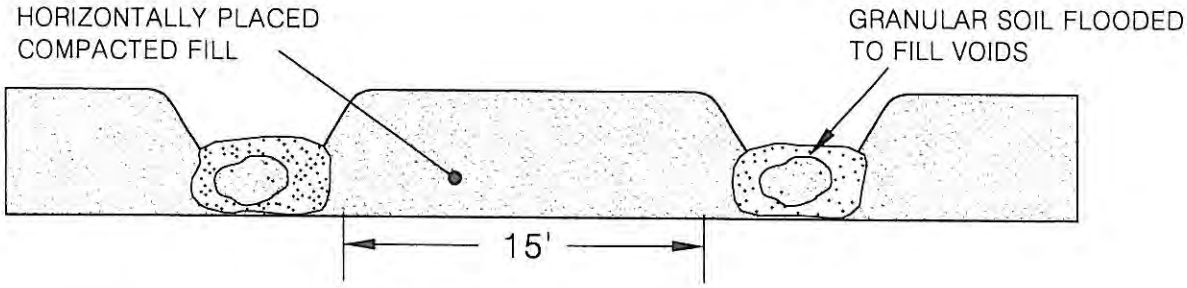
OBSERVE EQUIPMENT. SCRAPERS AND TRUCKS SHOULD BE FULLY SUPPORTED ON BLANKET WITHOUT SIGNIFICANT YIELDING. EXCAVATE TEST/OBSERVATION PITS TO CONFIRM EXISTENCE OF MIXTURE OF VARIOUS PARTICLE SIZES, WITHOUT SIGNIFICANT VOIDS, AND FORMING A DENSE, COMPACTED FILL MATRIX. TEST BY ASTM D1556, D2922 AND/OR D3017 WHEN APPROPRIATE. RECORD LIMITS AND ELEVATION OF BLANKET. ALL FILL AND COMPACTION OPERATIONS TO BE CONDUCTED UNDER THE OBSERVATION OF THE GEOTECHNICAL ENGINEER. SUBSEQUENT LIFTS TO BE APPLIED ONLY AFTER OBSERVATION AND CONFIRMATION OF SUITABILITY OF FILL AND RELEASE BY THE GEOTECHNICAL ENGINEER. BLANKETS TO BE CONSTRUCTED IN ACCORDANCE WITH PLATE G-12.

ROCK WINDROW DETAIL



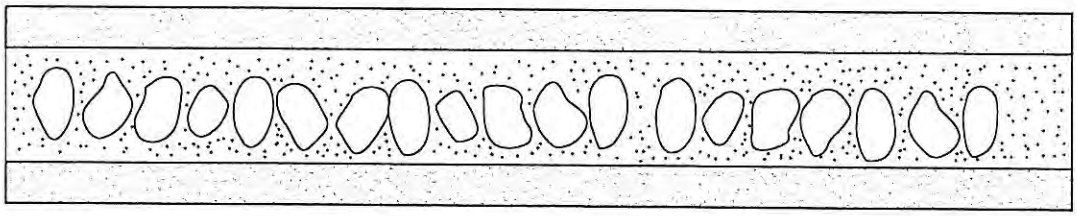
NOTE: OVERSIZED MATERIAL SHOULD BE REMOVED FROM THE 15' CLEAR ZONES WITH SPECIAL EQUIPMENT, SUCH AS A ROCK RAKE, PRIOR TO PLACING THE NEXT FILL LIFT.
*VARIANCES TO THE ABOVE ROCK HOLD DOWN MAY BE GRANTED SUBJECT TO APPROVAL BY THE OWNER, GEOTECHNICAL ENGINEER, AND GOVERNING AGENCY

TYPICAL WINDROW DETAIL (END VIEW)

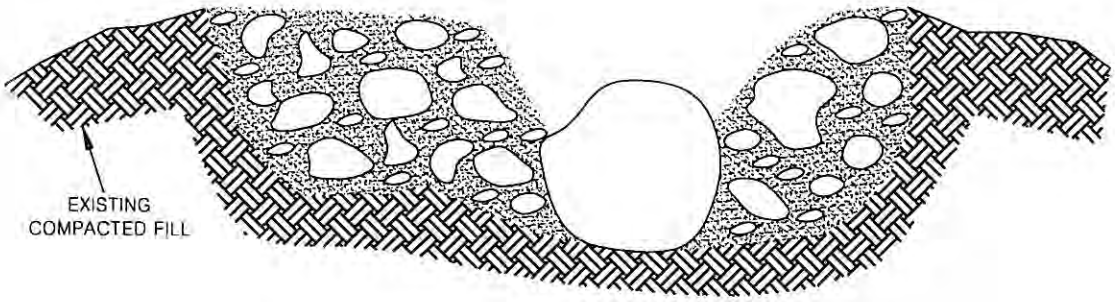


NOTE: COMPACTED FILL SHALL BE BROUGHT UP TO A HIGHER ELEVATION ALONG EACH WINDROW SO GRANULAR SOIL CAN BE FLOODED IN A "TRENCH CONDITION".

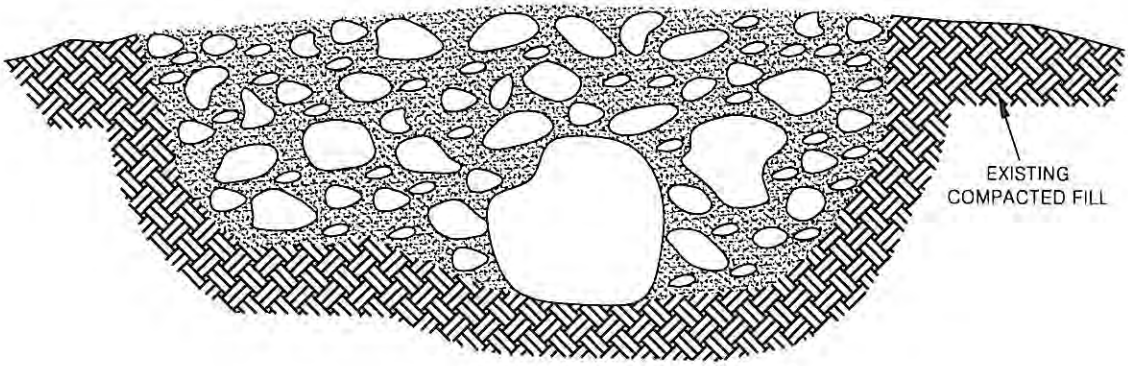
PROFILE VIEW



ISOLATED ROCK BURIAL DETAILS

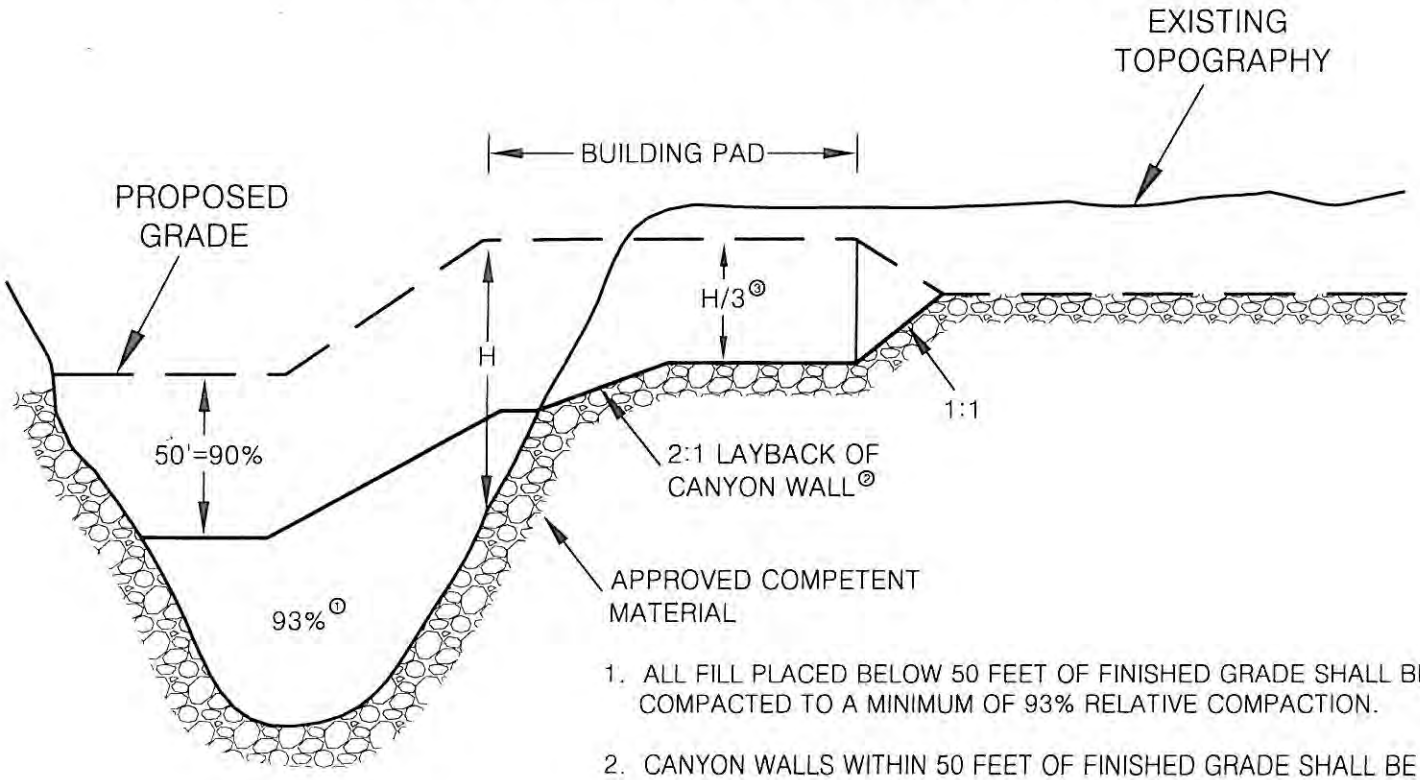


EXCAVATE HOLE INTO EXISTING FILL PRISM, PLACE BOULDER (< 8 feet in maximum dimension) INTO EXISTING COMPACTED FILL. SURROUND WITH SAND, GRAVEL, COBBLES AND WATER HEAVILY. TRACK WITH D8 OR LARGER EQUIPMENT UNTIL RESULTING FILL FULLY SUPPORTS EQUIPMENT. OBSERVE AND/OR TEST IN ACCORDANCE WITH ASTM D1556, D2922 OR D3017. ROCKS LARGER THAN 8 FEET SHALL BE FURTHER REDUCED IN SIZE BY SECONDARY BREAKING.



RELATIVE COMPACTION VS. DEPTH

CANYON WALL LAY BACK
DIFFERENTIAL FILL OVEREXCAVATION DETAILS



1. ALL FILL PLACED BELOW 50 FEET OF FINISHED GRADE SHALL BE COMPACTED TO A MINIMUM OF 93% RELATIVE COMPACTION.

2. CANYON WALLS WITHIN 50 FEET OF FINISHED GRADE SHALL BE LAID BACK TO A SLOPE RATIO OF 2:1 OR FLATTER.

3. ALL BUILDING PADS SHALL BE OVER EXCAVATED TO A MINIMUM OF 1/3 OF THE MAXIMUM DEPTH OF FILL BELOW THE BUILDING PAD TO A MAXIMUM OF 17 FEET.

4. IF THE 2:1 LAY BACK OF THE CANYON WALL IS IMPRACTICAL, THEN AS AN ALTERNATIVE THE INCREASED COMPACTION STANDARDS IN NOTE 1 SHOULD BE EXTENDED UP TO H/3 AND THE LAY BACK WILL NOT BE REQUIRED.

Typical Lot Setbacks

Project Summary

Total Site Area: ± 2.45 Acres

Total Units: 24 Homes
- (8) Plan 1: ± 1,700 SF, 3 bedroom
- (16) Plan 2: ± 1,900 SF, 3 bedroom, opt. bed 4

Density: 9.8 Homes per Acre

Parking:

Required: 54 Spaces (2.25 spaces per home)
- (24) Homes x 2.0 Spaces = 48 Spaces
- (24) Guest x 0.25 Spaces = 6 Spaces

Provided: 102 Spaces (4.25 spaces per home)
- Garage: 48 Spaces (18' x 20' clear)
- Driveway: 48 Spaces (2 space/drive)
- Parallel: 6 Spaces (9' x 22')

Open Space:

Provided: 14,050 S.F. Total (585 S.F. per home)
- Common: 5,390 S.F. (10' Min. Dimension)
- Private: 8,660 S.F. (10' Min. Dimension)

Zoning Summary

Existing General Plan:	Medium Density Residential
Proposed General Plan:	Medium Density Residential
Existing Zoning:	CL - Limited Commercial & P - Parking
Proposed Zoning:	R-M-D - Medium Density Residential - Planned Development
Max. Density:	17.14 Homes per Acre (2,500 sf/home)
Proposed Setbacks:	Compton Blvd: 15' to building 9' to covered porch
	Dwight Ave: 15' to building 12' to covered porch
	Kemp Ave: 15' to building 12' to covered porch
	151st St: 14' to single story element (building 1 & 17) 15' to front of building 9' to covered porch
Building Separation:	10'
Max. Building Height:	35'

Project Owner's Certification of the Preliminary Low Impact Development (LID) Plan

Project Name: ***Concord***

Project Number: **Tentative Tract Map No. 82807**
APN 6161-001-902

Project Address: **930 W. Compton Boulevard**
Compton, CA 90220

This Preliminary Low Impact Development (LID) Plan for the ***Concord*** (***TM 82807)*** project has been prepared for City Ventures by C&V Consulting, Inc. It is intended to comply with the requirements of the City of Compton's Conditions of Approval.

The undersigned is authorized to approve implementation of provisions of this plan as appropriate, and will strive to have the plan carried out by successors consistent with the County of Los Angeles LID Manual and the intent of the NPDES storm water requirements.

"I certify under penalty of law that this document and all attachments were prepared under my jurisdiction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathered the information, to the best of my knowledge and belief, the information submitted is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Section 200

A. Contact Information/List of Responsible Parties

The property contact information is:

Kim Prijatel
Tel: (949) 258-7555
City Ventures
3121 Michelson Drive, Suite 150
Irvine, CA 92612

The property owner shall have primary responsibility and significant authority for the implementation, maintenance, and inspection of the property BMPs. Duties of the Owner include but are not limited to:

- Implementing all elements of the LID, including but not limited to:
  - Implementation of prompt and effective erosion and sediment control measures
  - Implementing all non-storm water management, and materials and waste management activities, such as: monitoring, discharges, general site clean-up; vehicle and equipment cleaning, spill control; good construction housekeeping to ensure that no materials other than storm water are discharged which may have an adverse effect on receiving waters or storm drain systems, etc.
- Pre-storm inspections
- Storm event inspections
- Post-storm inspections
- Routine inspections as described in the LID
- Ensuring elimination of all unauthorized discharges
- The Owner shall be assigned authority to mobilize crews in order to make immediate repairs to the control measures.
- Coordinate all of the necessary corrections/repairs are made immediately, and that the project complies with the LID at all times.
- Managing and report any Illicit Connections or Illegal Discharges.

Section 300

A. References

The following documents are made a part of this LID by reference:

- Project plans and specifications for the City of Compton to support the ***Concord (TM 82807)*** project, prepared by C&V Consulting, Inc., 9830 Irvine Center Drive, Irvine, CA 92618.

- County of Los Angeles Department of Public Works, Low Impact Development Standards Manual dated February 2014

- State Water Resources Control Board (SWRCB) National Pollutant Discharge Elimination System (NPDES) General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities, Order No. 2009-0009-DWQ, NPDES No. CAS000002 dated July 1, 2010

- California Stormwater BMP Handbook – Construction, January 2009.

- California Stormwater BMP Handbook – New Development and Redevelopment, January 2003.

- Los Angeles County Municipal Stormwater/ NPDES Permit Order R4-2012-0175

Section 400 – Body of LID

A. Objectives

This Low Impact Development (LID) Plan has four main objectives:

1) Identify all pollutant sources, including sources of sediment that may affect the quality of storm water discharges associated with daily use / activity (storm water discharges) from the property site.
2) Identify non-storm water discharges.
3) Identify, construct, implement and maintain Best Management Practices (BMPs) to reduce or eliminate pollutants in storm water discharges and authorized non-storm water discharges from the property site.
4) Develop a maintenance schedule for BMPs designed to reduce or eliminate pollutants.

B. Project Background and Description

The proposed project is located at 930 W. Compton Boulevard in the City of Compton, California and consists of approximately 2.45 acres. The site is bounded by W. Compton Boulevard to the north, W. 151st Street and existing single-family residential to the south, S. Kemp Avenue and existing single-family residential to the east, and Dwight avenue and a liquor store to the west. The project proposes to construct eight buildings of 60 residential units with private garages, private drive aisles, and guest parking areas. The private drive aisle provides access to the residences via two driveway entrances/exits along W. 151st Street. Drive aisles and parking areas will be composed of asphalt concrete pavement, and landscaping will be incorporated in open-space areas.

The project site is currently vacant with no visible traces of impervious coverage. Thus, pervious coverage is assumed to be 99% for the existing condition of the site per LACPW Hydrology Manual. Proposed condition coverage is assumed to be 86% impervious based on land use per Hydrology Manual.

C. Vicinity Map

The site is located at 930 W. Compton Avenue off of the I-110 freeway in the City of Compton, County of Los Angeles. The site is bounded by W. Compton Boulevard to the north, W. 151st Street and existing single-family residential to the south, S. Kemp Avenue and existing single-family residential to the east, and Dwight avenue and a liquor store to the west.

Refer to Figure 1 for the Vicinity Map.

D. Existing Site Drainage Condition

The existing site is relatively flat with elevations ranging between approximately 81 feet and 85 feet above mean sea level. Generally, the existing site drainage surface flows overland in the northeasterly direction and overflows into the rights-of-way of W. Compton Boulevard and S. Kemp Avenue. Within the public rights-of-way, drainage is captured by existing catch basins within W. Compton Boulevard and S. Kemp Avenue and conveyed to an existing Los Angeles County Flood Control District (LACFCD) 66" Reinforced Concrete storm drain facility within W. Compton Boulevard which outlets to the existing Compton Creek. Compton Creek flows in the southeasterly direction and outlets to the existing Los Angeles River which ultimately drains to the Pacific Ocean at San Pedro Bay. Water bodies downstream of the project site are listed on the most current 303 (d) List as follows:

- Compton Creek
    - Benthic-Macroinvertebrate Bioassessments
    - Coliform Bacteria
    - Copper
    - Lead
    - pH
    - Trash
- Los Angeles River
    - Ammonia
    - Cadmium
    - Coliform Bacteria
    - Dissolved Copper
    - Cyanide
    - Diazinon
    - Lead
    - Nutrients (Algae)
    - pH
    - Trash
    - Dissolved Zinc
- San Pedro Bay
    - Chlordane

All facilities downstream of the project site are engineered, therefore the project is exempt from Hydromodification Control requirements.

E. Proposed Site Drainage Conditions

The proposed development site comprises a total of 2.45 acres. The proposed site consists of 60 residential units with private garages, a private drive aisle, sidewalks, guest parking areas, and associated landscaping.

Proposed drainage will be directed as sheet flow overland and through a series of area drains towards proposed Modular Wetlands System (MWS) Biofiltration Vaults for water quality treatment prior to discharging to the existing LACFCD 66" storm drain within W. Compton Boulevard. The proposed area drain system will collect surface runoff within landscaped and backyard areas and convey flows directly to the proposed MWS Biofiltration Vaults via proposed underground storm drain. Street surface flows will be conveyed via proposed curb and gutter towards two (2) proposed curb-inlet catch basins located along the private drive aisle. The proposed catch basins will be equipped with a Dvert system designed to divert low flows to the proposed MWS Biofiltration Vaults. Treated stormwater will be conveyed via proposed underground storm drain to proposed underground detention systems which will be outflow controlled to mitigate peak discharge to the existing LACFCD storm drain within W. Compton Boulevard. During larger storm events and when the MWS Biofiltration Vaults are at capacity, the Dvert system within the catch basins and an internal bypass within the MWS Biofiltration Vaults will allow for high flows to bypass treatment and flow directly to the proposed detention systems via the proposed storm drain system. Drainage from the site will be conveyed from the detention system to the existing LACFCD 66" storm drain at two (2) points of connection. Upon discharging to the existing LACFCD storm drain, site runoff will follow the historic drainage pattern.

Refer to Figure 2, BMP Exhibit for additional information.

F. LID Project Types, Characteristics, & Activities

Per the Los Angeles Department of Public Works (LACDPW), *Low Impact Development Standards Manual*, dated February 2014, the proposed project is classified as a "Designated Project." A "Designated Project" is defined by the LACDPW as follows:

> "Redevelopment projects, which are developments that result in creation or addition or replacement of either: (1) 5,000 square feet or more of impervious surface on a site that was previously developed as described in the above bullets; or (2) 10,000 square feet or more of impervious surface area on a site that was previous developed as a single family home."

G. Pollutant Source Identification and BMP Selection

The following is a list of materials to be used in the daily construction activities at the project site, which will potentially contribute to pollutants, other than sediment, to storm water runoff. Control Practices for each activity are identified below:

- Vehicle fluids, including oil, grease, petroleum, and coolants from personal vehicles
- Landscaping materials and wastes (topsoil, plant materials, herbicides, fertilizers, mulch, pesticides)
- General trash debris and litter
- Pet waste (bacteria/ fecal coliforms)

The Best Management Practices (BMPs) that have been selected for implementation on this project are detailed in the following sections.

H. Source Control BMPs

Project proponents shall implement Site Design concepts that achieve each of the following:

- Minimize Urban Runoff
- Minimize Impervious Footprint
- Conserve Natural Areas
- Minimize Directly Connected Impervious Areas (DCIAs)

Table-1 identifies the source control and treatment BMPs and how each is implemented to achieve each Site Design concept. BMP fact sheets are provided by the LACDPW *Low Impact Development Standards Manual* and the California Stormwater Quality Association.

Table-1: Source Control BMPs

BMP	BMP DESCRIPTION	CHECK ONE		IF NOT APPLICABLE, STATE BRIEF REASON

SD-36	Outdoor Work Areas or Processing Areas		X	No proposed outdoor work areas
	Provide Wash Water Controls for Food Preparation Areas		X	No proposed food preparation areas

Non-Structural Measures

Non-structural BMPs are generally managerial, educational, inspection and/ or maintenance oriented. These items consist of educating employees and occupants, developing and implementing HOA guidelines, implementing BMPs and enforcing Code requirements. Non-structural BMPs used for this project are summarized below:

Education for Employees and Occupants

Practical informational materials will be provided to homeowners, HOA and employees on general good housekeeping practices that contribute to protection of storm water quality. Among other things, these materials will describe the use of chemicals (including household type) that should be limited to the property, with no discharge of specified wastes via hosing or other direct discharge to gutters, catch basins and storm drains. Initially, the Owner will provide these materials. Thereafter, such materials will be available through the HOA education program.

This program must be maintained, enforced, and updated periodically by the HOA. Educational materials including, but not limited to, the materials included in the Appendix F of this plan will be made available to the employees and contractors of the HOA.

Activity Restrictions

Activities on this site will be limited to activities related to residential living. The project's Conditions, Covenants, and Restrictions (CC&Rs) will outline the activities that are restricted on the property. Such activities related to the LID include car washing, car maintenance and disposal of used motor fluids, pet waste cleanup, and trash container areas.

Efficient Landscape System & Landscape Maintenance

Management programs will be designed and established by the HOA, who will maintain the common areas within the project site. These programs will include how to mitigate the potential dangers of fertilizer and pesticide usage (refer to the Maintenance and Frequency Table). Ongoing maintenance will be consistent with the State of California Model- Water Efficient Landscape Ordinance. Fertilizer and pesticide usage shall be consistent with County Management Guidelines for use of Fertilizers and Pesticides.

Street Sweeping in Private Streets and Parking Lots

The HOA shall have all streets and parking lots swept on a weekly basis. This procedure will be intensified around October 15th of each year prior to and throughout rain storm period.

Drainage Facility Inspection & Maintenance

The HOA will be responsible for implementing each of the BMPs detailed in this plan. The HOA will also be responsible for cleaning and maintaining the BMPs on a regular basis. Refer to Appendix G for the Operation and Maintenance Plan. Refer to Appendix C for site specific drainage BMP information.

Storm Drain Stenciling/ Signage
Phrase "No Dumping – Drains to Ocean" or equally effective phrase to be stenciled on catch basins to alert the public to the destination of pollutants discharged into storm water. This stenciling will be inspected and re-stenciled on a periodic basis by the HOA. Refer to Table 4 for maintenance frequency.

Landscape & Irrigation System Design
As part of the design of all common area landscape irrigation shall employ water conservation principals, including, but not limited to, such provisions as water sensors, programmable irrigation times (for short cycles), etc. will be used. Such common areas will be maintained by the HOA.

Common Area Litter Control
The HOA must implement trash management and litter control procedures in common areas aimed at reducing pollution of drainage water. The HOA may contract a landscape maintenance company to provide this service during regularly scheduled maintenance which will consist of litter patrol and noting trash disposal violations and reporting the violations to the HOA for investigation.

Title 22 CC&R Compliance
The HOA will comply with this Regulation as part of the development's CC&Rs. CC&Rs will be prepared as a separate document and reviewed by the City's Attorney.

Uniform Fire Code Implementation
The HOA will comply with this Code as part of the development's CC&Rs. CC&Rs will be prepared as a separate document and reviewed by the City's Attorney.

Employee Training
A training program will be established as it would apply to future employees, contractors, and homeowners of the HOA to inform and train in maintenance activities regarding the impact of dumping oil, paints, solvents, or other potentially harmful chemicals into storm drains; the proper use of fertilizers and pesticides in landscaping maintenance practices; and the impacts of littering and improper water disposal.

The HOA (or a hired firm) will conduct the training program which will include targeted training sessions with specific construction disciplines (landscaping, concrete finishers, painters, etc.). See Appendix F for examples of educational materials that will be provided to the Employees.

The project's CC&Rs will include provisions for future employee training programs conducted on a yearly based prior to the rainy season.

I. Structural BMPs

Structural BMPs shall be installed by the developer, through the construction and development of the project, for instance; landscaping and irrigation systems shall be designed by licensed landscape architects and installed by qualified contractors to specifications and standards of the City of Compton. The structural BMPs used for this project are summarized below:

Expected pollutants associated with this development include vehicle discharge fluids, landscaping materials and waste, litter, and pet waste. To mitigate these pollutants, the structural best management practices summarized below.

Table-2: Design BMPs

BMP	TECHNIQUE	INCLUDED? YES	INCLUDED? NO	BRIEF DESCRIPTION OF METHOD
SD-10	Minimize Impervious Area/Maximize Permeability (C-Factor Reduction)	X		We have incorporated landscape areas wherever possible within the project site. See Appendix B for details.
	Minimize Directly Connected Impervious Areas (DCIAs) (C-Factor Reduction)	X		We minimize DCIAs by limiting sidewalks and parking areas to the minimum necessary for proper use. Stepping stones are used in areas with minimal foot traffic.
	Create Reduced or "Zero Discharge" Areas (Runoff Volume Reduction)	X		The entire SWQDV will be infiltrated, resulting in an overall runoff volume reduction.

BIO-1	Biofiltration	X		MWS Biofiltration Vaults will be utilized in the proposed development.

Biofiltration: Modular Wetlands System, Biofiltration Units

Modular Wetland System (MWS) Biofiltration Vaults will be utilized to capture and treat the stormwater runoff prior to leaving the site. MWS utilizes a 3-phase treatment train by conveying stormwater runoff through a pre-treatment chamber, planting or "Wetland" chamber and discharge chamber. Treated stormwater will be discharged into the proposed underground storm drain system which connects directly to the an existing LACFCD 66" storm drain system within W. Compton Boulevard.

Based on the grading and drainage design, the site will be divided into two (2) Drainage Management Areas (DMA) and utilize two (2) MWS Biofiltration Vaults to provide treatment of stormwater runoff. The design flowrate and treatment capacity for each DMA are as follows:

Drainage Management Area (DMA)	Size (ac)	Peak Flow Rate (cfs)*	Peak Flow Rate x 1.5 (cfs)	MWS Model	MWS HGL Height (ft)	Treatment Capacity (cfs)
1	1.085	0.237	0.356	MWS-L-8-16-V	3.4	0.462
2	1.365	0.298	0.447	MWS-L-8-16-V	3.4	0.462
Total	2.45	0.535	0.803	-		0.924

*Los Angeles County Department of Public Works (LACDPW) HydroCalc Software was utilized to calculate peak flowrates. The governing flowrate between the 0.75-inch storm event and the 85th Percentile storm event was utilized for design. Refer to Appendix A for HydroCalc outputs.

The proposed site will generate a total design flowrate of approximately 0.535 cfs. After multiplying this value by a factor of 1.5, the required treatment flowrate equals 0.803 cfs. The MWS Biofiltration Vaults provide a total treatment capacity of approximately 0.924 cfs and therefore provide more than enough treatment for the proposed development. The MWS systems will address the pollutants of concern associated with the development type. Refer to Appendix C for more information on MWS Biofiltration Vaults.

Catch Basin Inspection

The HOA will maintain the drainage systems, including catch basins and culverts. The HOA is required to have catch basins inspected and, if necessary, cleaned prior to the storm season, no later than October 15th each year or prior to the first 24-hour storm event, whichever occurs first. These duties may be contracted out to the landscape maintenance firm hired by the HOA. Please see Appendix E for maintenance program. Refer to Appendix G for the Operation and Maintenance Plan.

Runoff-Minimizing Landscape Design

As part of the design of all common area landscape areas, similar planting material with similar water requirements will be used in order to reduce excess irrigation runoff and promote surface filtration. Such common areas will be maintained by the HOA.

Community Car Wash Racks
No community car wash rack or area will be provided, therefore, vehicle washing by residents on the property will not be allowed per the CC&Rs.

Self-Contained Washing
Self-contained washing of vehicles by residents or owners on the property will not be allowed per the CC&Rs.

Outdoor Material Storage Areas
Outdoor material storage areas refer to storage areas or storage facilities solely for the storage of materials. Improper storage of materials outdoors may provide an opportunity for toxic compounds, oil and grease, heavy metals, nutrients, suspended solids, and other pollutants to enter the storm water conveyance system. Outdoor Storage by residents or owners on the property will not be allowed per the CC&Rs.

J. BMP Maintenance, Inspection, and Repair

Inspections will be conducted as follows:

- Annually and prior to the start of the rainy season
- Every (1) month during rainy season
- At any other time(s) or intervals of time specified in the contract documents

Repairs and/ or maintenance procedures shall be carried out at the soonest possible time.

K. Inspection, Maintenance, and Responsibility for BMPs

Table-4 and Table-5 show the lists of the post-construction BMPs (routine non-structural and structural), the required ongoing maintenance, the inspection and maintenance frequency, the inspection criteria, and the entity or party responsible for implementation, maintenance, and/or inspection.

Table-4: Non-Structural BMP Maintenance Responsibility/Frequency Matrix

BMP	RESPONSIBILITY	FREQUENCY
Homeowner/ Business owner Education, Activity Restrictions	HOA will provide educational materials. Those materials and responsibilities must be passed onto subsequent property owners.	Continuous. CC&Rs to be provided to homeowners at the time they purchase the property and updates provided by the HOA as they occur.
Common Area Landscape Management	HOA will appoint a landscape maintenance contractor	Monthly during regular maintenance and use with management guidelines for use of fertilizers and pesticides.
Parking Areas and Drive Aisle Management	HOA	The Drives Aisles are to be swept on a routine scheduled basis to facilitate the pickup of trash and debris (plant or otherwise) and to remove excessive oil, grease and build-up. During sweeping, debris is to be removed from the parking areas and drives and then scrubbed and rinsed. This sweeping schedule will be at a minimum occurrence of once a week and as necessary to rid / reduce active pollutants from the pavement areas. This maintenance requirement will be listed in the Convent, Conditions and Restrictions (CC&Rs) of this project. These CC&Rs will be recorded to the property at the County Recorder's Office and be included on the final Title report of these properties.
Litter Control by Sweeping	HOA	Weekly inspection of trash receptacles to ensure that lids are closed and pick up any excess trash on the ground, noting trash disposal violations to the HOA for remediation.
Employee Training	HOA	Monthly for maintenance personnel and employees to include the educational materials contained in the approved LID.
Common Area Catch Basin Inspection & Cleaning	HOA will appoint a landscape maintenance contractor for common areas and storm drain facilities.	Inspect basins once a month. Clean debris and silt in bottom of catch basins as needed. Intensified on or about October 15th each year or prior to the first 24-hour storm event, whichever occurs first. Refer to Appendix E.

Table-5: Structural BMP Maintenance Responsibility/ Frequency Matrix

BMP	RESPONSIBILITY	FREQUENCY
Common Area Efficient Irrigation	HOA will appoint a landscape contractor after construction	Once a week, in conjunction with maintenance activities. Verify that runoff minimizing landscape design continues to function by checking that water sensors are functioning properly, that irrigation heads are adjusted properly to eliminate overspray to hardscape areas, and to verify that irrigation timing and cycle lengths are adjusted in accordance with water demands, given time of year, weather and day or night time temperatures.
Common Area Runoff Efficient Landscape Design	HOA will appoint a landscaping contractor	Once a week in conjunction with maintenance activities and prior to finalizing any replanting schemes. Verify that plants continue to be grouped according to similar water requirements in order to reduce excess irrigation runoff.
Modular Wetlands System (MWS) Biofiltration Vaults	HOA	MWS Biofiltration Vaults maintenance will conform to manufacturer's specifications. Please see additional information in Appendix C

L. Operation/Maintenance Funding after Project Completion

The post-construction BMPs as described above will be funded and maintained by:

Kim Prijatel
Tel: (949) 258-7555
City Ventures
3121 Michelson Drive, Suite 150
Irvine, CA 92612

Maintenance and requirements of the maintenance for the properties will be listed in the Convent, Conditions and Restrictions (CC&Rs) of this project and will be the responsibility of the property owner at all times. These CC&Rs will be recorded to the property at the County Recorder's Office and be included on the Title report of these properties.

Appendix A:
Volume and Infiltration Calculations & Hydrologic Report

The proposed development was analyzed for the 0.75-in storm event and the 85th Percentile storm event using the LACDPW HydroCalc software. The governing peak flowrate between the two storm events was utilized for design. In accordance with the LA County BMP Design Manual, a factor of 1.5 was applied to obtain the design flowrate. Below is a summary of the HydroCalc outputs:

DMA	85th Percentile Storm ✓		0.75-in Storm		Governing Flowrate (cfs)	Flowrate x 1.5 (cfs)
	Volume (cf)	Flowrate (cfs)	Volume (cf)	Flowrate (cfs)		
1	2678	0.237	2308	0.195	0.237	0.356
2	3369	0.298	2904	0.245	0.298	0.447

Refer to LACDPW HydroCalc Output Data within this Appendix for Volume and Flowrate Calculations.

Appendix B:
Site BMPs

S-1: Storm Drain Message and Signage

Purpose

Waste material dumped into storm drain inlets can adversely impact surface and ground waters. In fact, any material discharged into the storm drain system has the potential to significantly impact downstream receiving waters. Storm drain messages have become a popular method of alerting and reminding the public about the effects of and the prohibitions against waste disposal into the storm drain system. The signs are typically stenciled or affixed near the storm drain inlet or catch basin. The message simply informs the public that dumping of wastes into storm drain inlets is prohibited and/or that the drain ultimately discharges into receiving waters.

General Guidance

- The signs must be placed so they are easily visible to the public.
- Be aware that signs placed on sidewalk will be worn by foot traffic.

Design Specifications

- Signs with language and/or graphical icons that prohibit illegal dumping, must be posted at designated public access points along channels and streams within the project area. Consult with Los Angeles County Department of Public Works (LACDPW) staff to determine specific signage requirements for channels and streams.
- Storm drain message markers, placards, concrete stamps, or stenciled language/icons (e.g., “No Dumping – Drains to the Ocean”) are required at all storm drain inlets and catch basins within the project area to discourage illegal or inadvertent dumping. Signs should be placed in clear sight facing anyone approaching the storm drain inlet or catch basin from either side (see Figure D-1 and Figure D-2). LACDPW staff should be contacted to determine specific requirements for types of signs and methods of application. A stencil can be purchased for a nominal fee from LACDPW Building and Safety Office by calling (626) 458-3171. All storm drain inlet and catch basin locations must be identified on the project site map.

Maintenance Requirements

Legibility and visibility of markers and signs should be maintained (e.g., signs should be repainted or replaced as necessary). If required by LACDPW, the owner/operator or homeowner’s association shall enter into a maintenance agreement with the agency or record a deed restriction upon the property title to maintain the legibility of placards and signs.

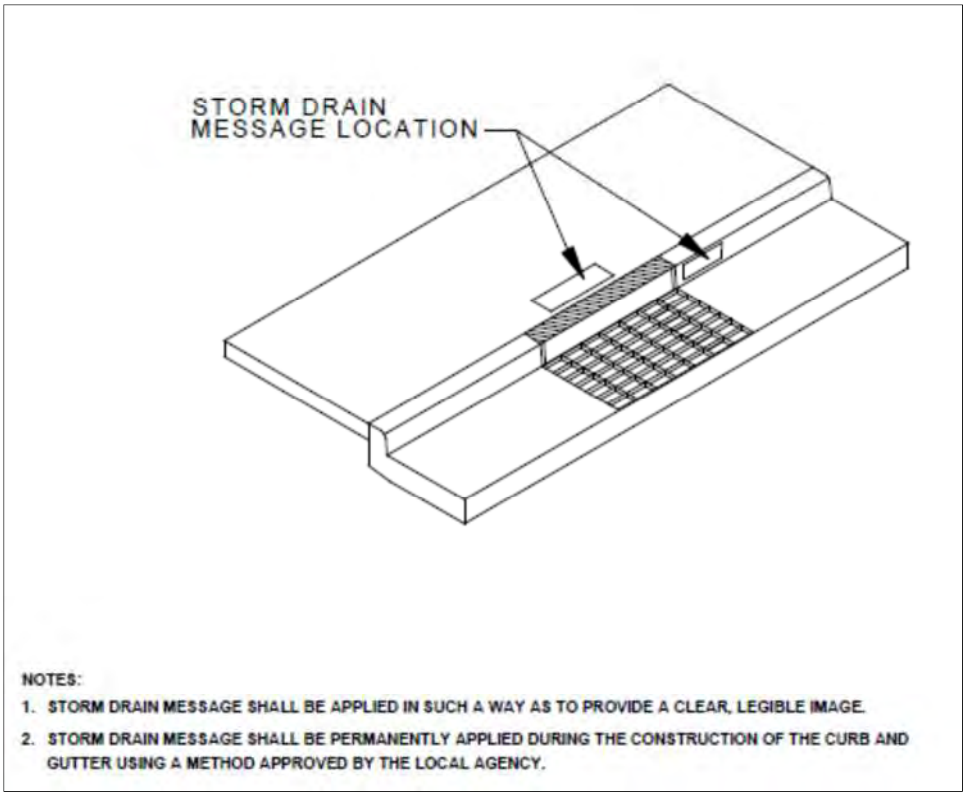

Figure D-1. Storm Drain Message Location – Curb Type Inlet

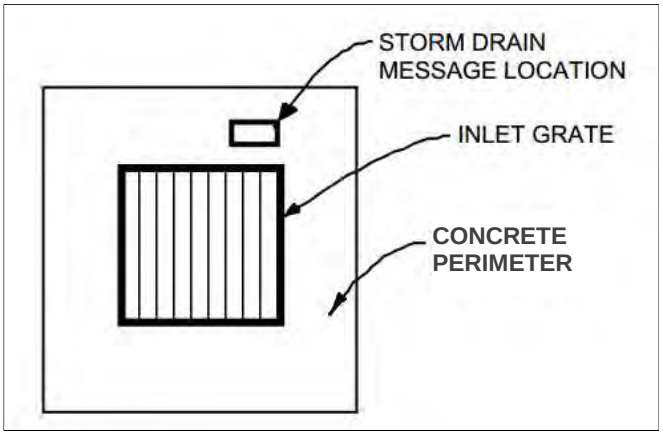

Figure D-2. Storm Drain Message Location – Catch Basin/Area Type Inlet

S-8: Landscape Irrigation Practices

Purpose

Irrigation runoff provides a pathway for pollutants (i.e., nutrients, bacteria, organics, sediment) to enter the storm drain system. By effectively irrigating, less runoff is produced resulting in less potential for pollutants to enter the storm drain system.

General Guidance

- Do not allow irrigation runoff from the landscaped area to drain directly to storm drain system.
- Minimize use of fertilizer, pesticides, and herbicides on landscaped areas.
- Plan sites with sufficient landscaped area and dispersal capacity (e.g., ability to receive irrigation water without generating runoff).
- Consult a landscape professional regarding appropriate plants, fertilizer, mulching applications, and irrigation requirements (if any) to ensure healthy vegetation growth.

Design Specifications

- Choose plants that minimize the need for fertilizer and pesticides.
- Group plants with similar water requirements and water accordingly.
- Use mulch to minimize evaporation and erosion.
- Include a vegetative boundary around project site to act as a filter.
- Design the irrigation system to only water areas that need it.
- Install an approved subsurface drip, pop-up, or other irrigation system.[1] The irrigation system should employ effective energy dissipation and uniform flow spreading methods to prevent erosion and facilitate efficient dispersion.
- Install rain sensors to shut off the irrigation system during and after storm events.
- Include pressure sensors to shut off flow-through system in case of sudden pressure drop. A sudden pressure drop may indicate a broken irrigation head or water line.
- If the hydraulic conductivity in the soil is not sufficient for the necessary water application rate, implement soil amendments to avoid potential geotechnical hazards (i.e., liquefaction, landslide, collapsible soils, and expansive soils).

[1] If alternative distribution systems (e.g., spray irrigation) are approved, the County will establish guidelines to implement these new systems.

- For sites located on or within 50 feet of a steep slope (15% or greater), do not irrigate landscape within three days of a storm event to avoid potential geotechnical instability.[2]
- Implement Integrated Pest Management practices.

For additional guidelines and requirements, refer to the Los Angeles County Department of Health Services.

Maintenance Requirements

Maintain irrigation areas to remove trash and debris and loose vegetation. Rehabilitate areas of bare soil. If a rain or pressure sensor is installed, it should be checked periodically to ensure proper function. Inspect and maintain irrigation equipment and components to ensure proper functionality. Clean equipment as necessary to prevent algae growth and vector breeding. Maintenance agreements between LACDPW and the owner/operator may be required. Failure to properly maintain building and property may subject the property owner to citation.

Site Design & Landscape Planning SD-10

Design Objectives

- ☑ Maximize Infiltration
- ☑ Provide Retention
- ☑ Slow Runoff
- ☑ Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

Description

Each project site possesses unique topographic, hydrologic, and vegetative features, some of which are more suitable for development than others. Integrating and incorporating appropriate landscape planning methodologies into the project design is the most effective action that can be done to minimize surface and groundwater contamination from stormwater.

Approach

Landscape planning should couple consideration of land suitability for urban uses with consideration of community goals and projected growth. Project plan designs should conserve natural areas to the extent possible, maximize natural water storage and infiltration opportunities, and protect slopes and channels.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment.

Design Considerations

Design requirements for site design and landscapes planning should conform to applicable standards and specifications of agencies with jurisdiction and be consistent with applicable General Plan and Local Area Plan policies.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

Designing New Installations

Begin the development of a plan for the landscape unit with attention to the following general principles:

- Formulate the plan on the basis of clearly articulated community goals. Carefully identify conflicts and choices between retaining and protecting desired resources and community growth.
- Map and assess land suitability for urban uses. Include the following landscape features in the assessment: wooded land, open unwooded land, steep slopes, erosion-prone soils, foundation suitability, soil suitability for waste disposal, aquifers, aquifer recharge areas, wetlands, floodplains, surface waters, agricultural lands, and various categories of urban land use. When appropriate, the assessment can highlight outstanding local or regional resources that the community determines should be protected (e.g., a scenic area, recreational area, threatened species habitat, farmland, fish run). Mapping and assessment should recognize not only these resources but also additional areas needed for their sustenance.

Project plan designs should conserve natural areas to the extent possible, maximize natural water storage and infiltration opportunities, and protect slopes and channels.

Conserve Natural Areas during Landscape Planning

If applicable, the following items are required and must be implemented in the site layout during the subdivision design and approval process, consistent with applicable General Plan and Local Area Plan policies:

- Cluster development on least-sensitive portions of a site while leaving the remaining land in a natural undisturbed condition.
- Limit clearing and grading of native vegetation at a site to the minimum amount needed to build lots, allow access, and provide fire protection.
- Maximize trees and other vegetation at each site by planting additional vegetation, clustering tree areas, and promoting the use of native and/or drought tolerant plants.
- Promote natural vegetation by using parking lot islands and other landscaped areas.
- Preserve riparian areas and wetlands.

Maximize Natural Water Storage and Infiltration Opportunities Within the Landscape Unit

- Promote the conservation of forest cover. Building on land that is already deforested affects basin hydrology to a lesser extent than converting forested land. Loss of forest cover reduces interception storage, detention in the organic forest floor layer, and water losses by evapotranspiration, resulting in large peak runoff increases and either their negative effects or the expense of countering them with structural solutions.
- Maintain natural storage reservoirs and drainage corridors, including depressions, areas of permeable soils, swales, and intermittent streams. Develop and implement policies and

regulations to discourage the clearing, filling, and channelization of these features. Utilize them in drainage networks in preference to pipes, culverts, and engineered ditches.

- Evaluating infiltration opportunities by referring to the stormwater management manual for the jurisdiction and pay particular attention to the selection criteria for avoiding groundwater contamination, poor soils, and hydrogeological conditions that cause these facilities to fail. If necessary, locate developments with large amounts of impervious surfaces or a potential to produce relatively contaminated runoff away from groundwater recharge areas.

Protection of Slopes and Channels during Landscape Design

- Convey runoff safely from the tops of slopes.
- Avoid disturbing steep or unstable slopes.
- Avoid disturbing natural channels.
- Stabilize disturbed slopes as quickly as possible.
- Vegetate slopes with native or drought tolerant vegetation.
- Control and treat flows in landscaping and/or other controls prior to reaching existing natural drainage systems.
- Stabilize temporary and permanent channel crossings as quickly as possible, and ensure that increases in run-off velocity and frequency caused by the project do not erode the channel.
- Install energy dissipaters, such as riprap, at the outlets of new storm drains, culverts, conduits, or channels that enter unlined channels in accordance with applicable specifications to minimize erosion. Energy dissipaters shall be installed in such a way as to minimize impacts to receiving waters.
- Line on-site conveyance channels where appropriate, to reduce erosion caused by increased flow velocity due to increases in tributary impervious area. The first choice for linings should be grass or some other vegetative surface, since these materials not only reduce runoff velocities, but also provide water quality benefits from filtration and infiltration. If velocities in the channel are high enough to erode grass or other vegetative linings, riprap, concrete, soil cement, or geo-grid stabilization are other alternatives.
- Consider other design principles that are comparable and equally effective.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

Redevelopment may present significant opportunity to add features which had not previously been implemented. Examples include incorporation of depressions, areas of permeable soils, and swales in newly redeveloped areas. While some site constraints may exist due to the status of already existing infrastructure, opportunities should not be missed to maximize infiltration, slow runoff, reduce impervious areas, disconnect directly connected impervious areas.

Roof Runoff Controls SD-11

Rain Garden

Design Objectives

- ☑ Maximize Infiltration
- ☑ Provide Retention
- ☑ Slow Runoff
- Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- ☑ Contain Pollutants
- Collect and Convey

Description

Various roof runoff controls are available to address stormwater that drains off rooftops. The objective is to reduce the total volume and rate of runoff from individual lots, and retain the pollutants on site that may be picked up from roofing materials and atmospheric deposition. Roof runoff controls consist of directing the roof runoff away from paved areas and mitigating flow to the storm drain system through one of several general approaches: cisterns or rain barrels; dry wells or infiltration trenches; pop-up emitters, and foundation planting. The first three approaches require the roof runoff to be contained in a gutter and downspout system. Foundation planting provides a vegetated strip under the drip line of the roof.

Approach

Design of individual lots for single-family homes as well as lots for higher density residential and commercial structures should consider site design provisions for containing and infiltrating roof runoff or directing roof runoff to vegetative swales or buffer areas. Retained water can be reused for watering gardens, lawns, and trees. Benefits to the environment include reduced demand for potable water used for irrigation, improved stormwater quality, increased groundwater recharge, decreased runoff volume and peak flows, and decreased flooding potential.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment.

Design Considerations

Designing New Installations

Cisterns or Rain Barrels

One method of addressing roof runoff is to direct roof downspouts to cisterns or rain barrels. A cistern is an above ground storage vessel with either a manually operated valve or a permanently open outlet. Roof runoff is temporarily stored and then released for irrigation or infiltration between storms. The number of rain

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

barrels needed is a function of the rooftop area. Some low impact developers recommend that every house have at least 2 rain barrels, with a minimum storage capacity of 1000 liters. Roof barrels serve several purposes including mitigating the first flush from the roof which has a high volume, amount of contaminants, and thermal load. Several types of rain barrels are commercially available. Consideration must be given to selecting rain barrels that are vector proof and childproof. In addition, some barrels are designed with a bypass valve that filters out grit and other contaminants and routes overflow to a soak-away pit or rain garden.

If the cistern has an operable valve, the valve can be closed to store stormwater for irrigation or infiltration between storms. This system requires continual monitoring by the resident or grounds crews, but provides greater flexibility in water storage and metering. If a cistern is provided with an operable valve and water is stored inside for long periods, the cistern must be covered to prevent mosquitoes from breeding.

A cistern system with a permanently open outlet can also provide for metering stormwater runoff. If the cistern outlet is significantly smaller than the size of the downspout inlet (say ¼ to ½ inch diameter), runoff will build up inside the cistern during storms, and will empty out slowly after peak intensities subside. This is a feasible way to mitigate the peak flow increases caused by rooftop impervious land coverage, especially for the frequent, small storms.

Dry wells and Infiltration Trenches

Roof downspouts can be directed to dry wells or infiltration trenches. A dry well is constructed by excavating a hole in the ground and filling it with an open graded aggregate, and allowing the water to fill the dry well and infiltrate after the storm event. An underground connection from the downspout conveys water into the dry well, allowing it to be stored in the voids. To minimize sedimentation from lateral soil movement, the sides and top of the stone storage matrix can be wrapped in a permeable filter fabric, though the bottom may remain open. A perforated observation pipe can be inserted vertically into the dry well to allow for inspection and maintenance.

In practice, dry wells receiving runoff from single roof downspouts have been successful over long periods because they contain very little sediment. They must be sized according to the amount of rooftop runoff received, but are typically 4 to 5 feet square, and 2 to 3 feet deep, with a minimum of 1-foot soil cover over the top (maximum depth of 10 feet).

To protect the foundation, dry wells must be set away from the building at least 10 feet. They must be installed in solids that accommodate infiltration. In poorly drained soils, dry wells have very limited feasibility.

Infiltration trenches function in a similar manner and would be particularly effective for larger roof areas. An infiltration trench is a long, narrow, rock-filled trench with no outlet that receives stormwater runoff. These are described under Treatment Controls.

Pop-up Drainage Emitter

Roof downspouts can be directed to an underground pipe that daylights some distance from the building foundation, releasing the roof runoff through a pop-up emitter. Similar to a pop-up irrigation head, the emitter only opens when there is flow from the roof. The emitter remains flush to the ground during dry periods, for ease of lawn or landscape maintenance.

Foundation Planting

Landscape planting can be provided around the base to allow increased opportunities for stormwater infiltration and protect the soil from erosion caused by concentrated sheet flow coming off the roof. Foundation plantings can reduce the physical impact of water on the soil and provide a subsurface matrix of roots that encourage infiltration. These plantings must be sturdy enough to tolerate the heavy runoff sheet flows, and periodic soil saturation.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

Description and Purpose

Street sweeping and vacuuming includes use of self-propelled and walk-behind equipment to remove sediment from streets and roadways, and to clean paved surfaces in preparation for final paving. Sweeping and vacuuming prevents sediment from the project site from entering storm drains or receiving waters.

Suitable Applications

Sweeping and vacuuming are suitable anywhere sediment is tracked from the project site onto public or private paved streets and roads, typically at points of egress. Sweeping and vacuuming are also applicable during preparation of paved surfaces for final paving.

Limitations

Sweeping and vacuuming may not be effective when sediment is wet or when tracked soil is caked (caked soil may need to be scraped loose).

Implementation

- Controlling the number of points where vehicles can leave the site will allow sweeping and vacuuming efforts to be focused, and perhaps save money.
- Inspect potential sediment tracking locations daily.
- Visible sediment tracking should be swept or vacuumed on a daily basis.

- Do not use kick brooms or sweeper attachments. These tend to spread the dirt rather than remove it.
- If not mixed with debris or trash, consider incorporating the removed sediment back into the project

Costs

Rental rates for self-propelled sweepers vary depending on hopper size and duration of rental. Expect rental rates from $58/hour (3 yd^3 hopper) to $88/hour (9 yd^3 hopper), plus operator costs. Hourly production rates vary with the amount of area to be swept and amount of sediment. Match the hopper size to the area and expect sediment load to minimize time spent dumping.

Inspection and Maintenance

- Inspect BMPs prior to forecast rain, daily during extended rain events, after rain events, weekly during the rainy season, and at two-week intervals during the non-rainy season.
- When actively in use, points of ingress and egress must be inspected daily.
- When tracked or spilled sediment is observed outside the construction limits, it must be removed at least daily. More frequent removal, even continuous removal, may be required in some jurisdictions.
- Be careful not to sweep up any unknown substance or any object that may be potentially hazardous.
- Adjust brooms frequently; maximize efficiency of sweeping operations.
- After sweeping is finished, properly dispose of sweeper wastes at an approved dumpsite.

BIO-1: Biofiltration

Definition

A biofiltration area is a vegetated shallow depression that is designed to receive and treat stormwater runoff from downspouts, piped inlets, or sheet flow from adjoining paved areas. A shallow ponding zone is provided above the vegetated surface for temporary storage of stormwater runoff. During storm events, stormwater runoff accumulates in the ponding zone and gradually infiltrates the surface and filters through the biofiltration soil media before being collected by an underdrain system.

Stormwater runoff treatment occurs through a variety of natural mechanisms as stormwater runoff filters through the vegetation root zone. In biofiltration areas, microbes and organic material in the biofiltration soil media help promote the adsorption of pollutants (e.g., dissolved metals and petroleum hydrocarbons) into the soil matrix. Plants utilize soil moisture and promote the drying of the soil through transpiration. Biofiltration areas are typically planted with native, drought-tolerant plant species that do not require fertilization and can withstand wet soils for at least 96 hours.

A schematic of a typical biofiltration area is presented in Figure E-7.

LID Ordinance Requirements

Biofiltration can be used as an alternative compliance measure.

Pollutant of Concern	Treated by Biofiltration?
Suspended solids	No
Total phosphorus	No
Total nitrogen	Yes
Total Kjeldahl nitrogen	Yes
Cadmium, total	No
Chromium, total	Yes
Copper, total	No
Lead, total	Yes
Zinc, total	No

Source: Treatment Best Management Practices Performance, Los Angeles Regional Water Quality Control Board, December 9, 2013.

Advantages

- Has a low cost for installation
- Enhances site aesthetics
- Requires little maintenance

Disadvantages

- May require individual owner/tenants to perform maintenance

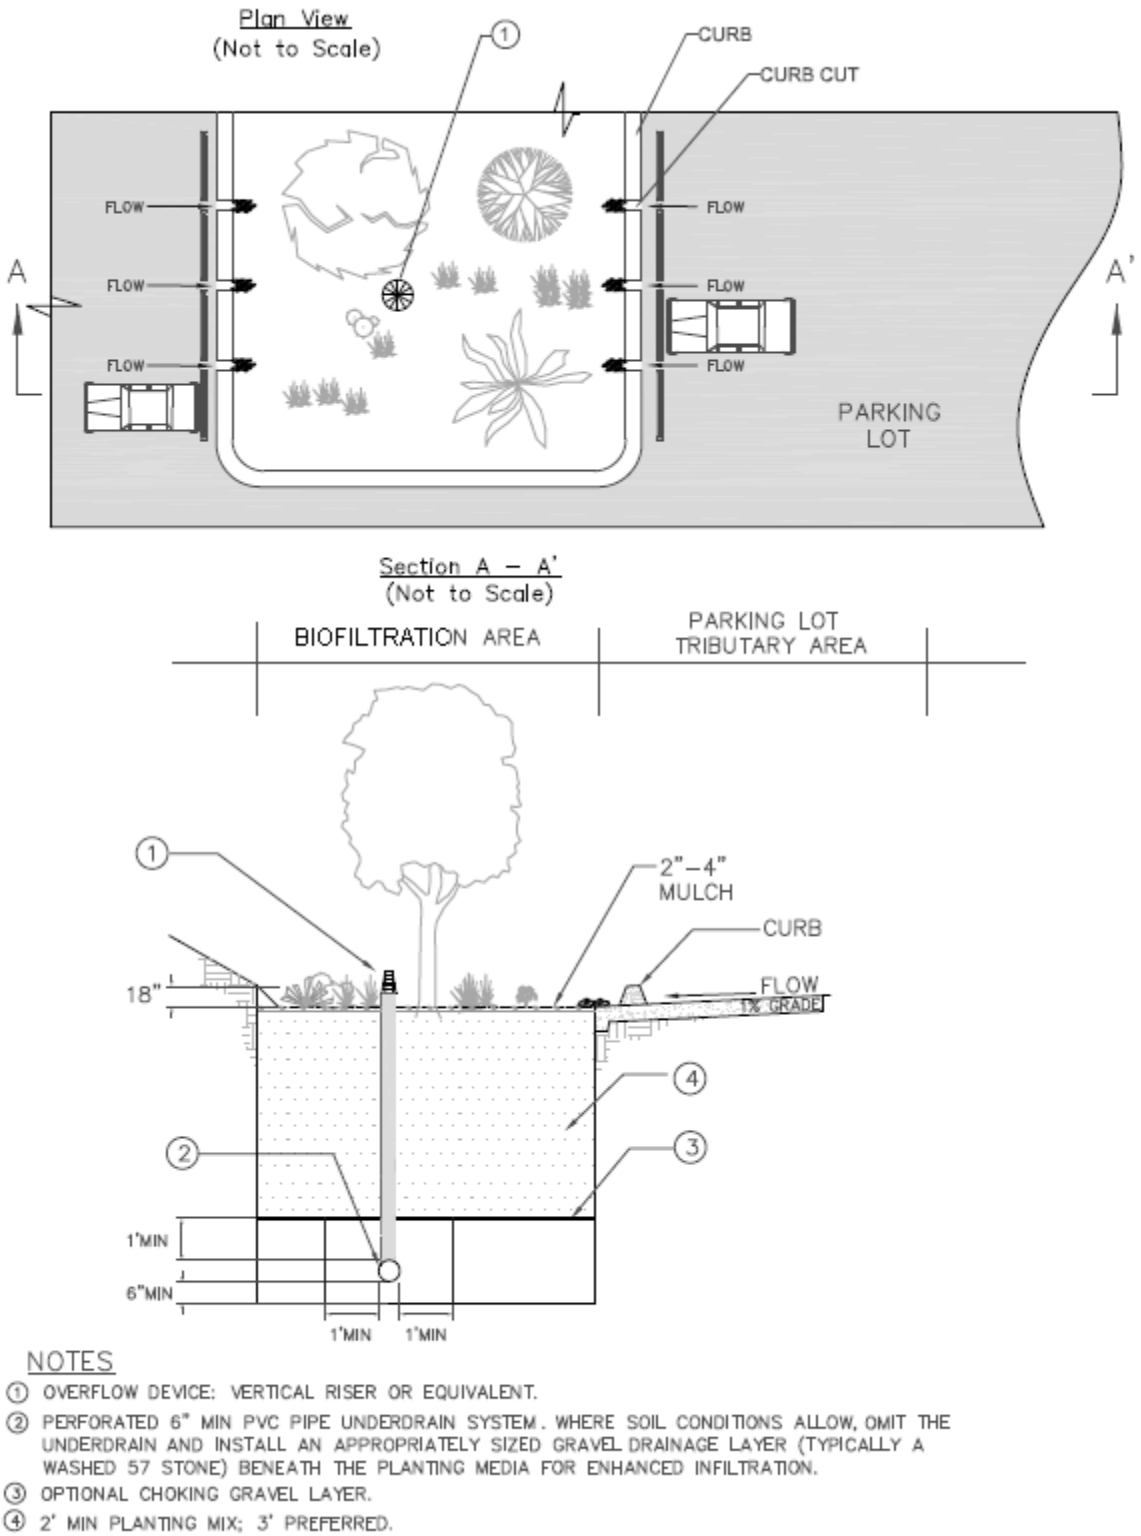

Figure E-7. Biofiltration Area Schematic

General Constraints and Implementation Considerations

- Biofiltration areas can be applied in various settings including, but not limited to:
  - Individual lots for rooftop, driveway, and other on-site impervious surface
  - Shared facilities located in common areas for individual lots
  - Areas within loop roads or cul-de-sacs
  - Landscaped parking lot islands
  - Within right-of-ways along roads
  - Common landscaped areas in apartment complexes or other multi-family housing designs
  - Parks and along open space perimeter
- If tire curbs are provided and parking stalls are shortened, cars are allowed to overhang the biofiltration area.
- Biofiltration areas must be located sufficiently far from structure foundations to avoid damage to structures (as determined by a certified structural or geotechnical engineer).
- Any parking areas bordering the biofiltration area must be monolithically poured concrete or deepended curb concrete to provide structural stability to the adjacent parking section.
- Geomembrane liners must be used in areas subject to spills or pollutant hot spots.
- During construction activities should avoid compaction of native soils below planting media layer or gravel zone.
- Stormwater runoff must be diverted around the biofiltration area during the period of vegetation establishment. If diversion is not feasible, the graded and seeded areas must be protected with suitable sediment controls (i.e., silt fences).All damaged areas should be repaired, seeded, or re-planted immediately.
- The general landscape irrigation system should incorporate the biofiltration area, as applicable.

Design Specifications

The following sections describe the design specifications for biofiltration areas.

Geotechnical

Due to the potential to contaminate groundwater, cause slope instability, impact surrounding structures, and potential for insufficient infiltration capacity, an extensive geotechnical site investigation must be conducted during the site planning process to verify site suitability for biofiltration. All geotechnical investigations must be performed according to the most recent GMED Policy GS 200.1. Soil infiltration rates and the

groundwater table depth must be evaluated to ensure that conditions are satisfactory for proper operation of a biofiltration area. The project applicant must demonstrate through infiltration testing, soil logs, and the written opinion of a licensed civil engineer that sufficiently permeable soils exist on-site to allow the construction of a properly functioning biofiltration system.

Biofiltration areas are appropriate for soils with a minimum corrected in-situ infiltration rate of 0.3 in/hr. The geotechnical report must determine if the proposed project site is suitable for a biofiltration area and must recommend a design infiltration rate (see "Design Infiltration Rate" under the "Sizing" section). The geotechnical investigation should be such that a good understanding is gained as to how the stormwater runoff will move through the soil (horizontally or vertically) and if there are any geological conditions that could inhibit the movement of water.

Pretreatment

Pretreatment refers to design features that provide settling of large particles before stormwater runoff enters a stormwater quality control measure in order to reduce the long-term maintenance burden. Pretreatment should be provided to reduce the sediment load entering a biofiltration area in order to maintain the infiltration rate of the biofiltration area. To ensure that biofiltration areas are effective, the project applicant must incorporate pretreatment devices that provide sediment removal (e.g., vegetated swales, vegetated filter strips, sedimentation manholes, and proprietary devices). The use of at least two pretreatment devices is highly recommended for biofiltration areas.

Geometry

- Biofiltration areas must be sized to capture and treat 1.5 times the SWQDv that is not reliably retained on the project site with an 18-inch maximum ponding depth.
- The planting soil depth must be a minimum of two feet, although three feet is preferred. The planting soil depth should provide a beneficial root zone for the chosen vegetation and adequate water storage for the stormwater runoff. A deeper planting soil depth will also provide a smaller surface area footprint.
- A gravel storage layer below the biofiltration area soil media is required to provide adequate temporary storage to retain 1.5 times the SWQDv that is not reliably retained on the project site and to promote infiltration.

Sizing

Biofiltration areas are sized using a simple sizing method where 1.5 times the SWQDv that is not reliably retained on the project site must be completely filtered within 96 hours. If the incoming stormwater runoff flow rate is lower than the long term filtration rate, above ground storage does not need to be provided. If the incoming stormwater runoff flow rate is higher than the long term filtration rate, above ground storage shall be provided (see steps below).

Step 1: Calculate the design volume

Biofiltration areas should be sized to capture and treat 1.5 times the portion of the SWQDv (see Section 6 for SWQDv calculation procedures) that is not reliability retained on the project site, as calculated by the equation below:

$$V_B = 1.5 \times (SWQDv - V_R)$$

Where:

V_B = Biofiltration volume [ft^3];
SWQDv = Stormwater quality design volume [ft^3]; and
V_R = Volume of stormwater runoff reliably retained on-site [ft^3].

Step 2: Calculate the design infiltration rate

Determine the corrected in-situ infiltration rate (f_{design}) of the native soil using the procedures described in the most recent GMED Policy GS 200.1.

Step 3: Calculate the surface area

Select a surface ponding depth (d) that satisfies the geometric criteria and meets the site constraints. Selecting a deeper ponding depth (up to 1.5 ft) generally yields a smaller footprint, however, it will require greater consideration for public safety, energy dissipation, and plant selection.

Calculate the time for the selected ponding depth to filter through the planting media using the following equation:

$$\mathrm{d} = t_p \times \frac{\mathrm{f_{design}}}{12}$$

Where:

d = Ponding depth (max 1.5 ft) [ft];
t_p = Required detention time for surface ponding (max 96 hr) [hr]; and
f_{design} = Design infiltration rate [in/hr].

If t_p exceeds 96 hours, reduce surface ponding depth (d). In nearly all cases, t_p should not approach 96 hours unless f_{design} is low.

Calculate the required infiltrating surface (filter bottom area) using the following equation:

$$A = \frac{V_B}{d}$$

Where:

A = Bottom surface area of biofiltration area [ft^2];
V_B = Biofiltration design volume [ft^3]; and
d = Ponding depth (max 1.5 ft) [ft].

Flow Entrance and Energy Dissipation

Maintain a minimum slope of 1 percent for pervious surfaces and 0.5 percent for impervious surfaces to the biofiltration area inlet. The following types of flow entrance can be used for biofiltration cells:

- Level spreaders (i.e., slotted curbs) can be used to facilitate sheet flow.
- Dispersed, low velocity flow across a landscape area. Dispersed flow may not be possible given space limitations or if the biofiltration area is controlling roadway or parking lot flows where curbs are mandatory.
- Dispersed flow across pavement or gravel and past wheel stops for parking areas.
- Flow spreading trench around perimeter of biofiltration area. May be filled with pea gravel or vegetated with 3:1 side slopes similar to a swale. A vertical-walled open trench may also be used at the discretion of LACDPW.
- Curb cuts for roadside or parking lot areas, if approved by LACDPW: curb cuts should include rock or other erosion controls in the channel entrance to dissipate energy. Flow entrance should drop two to three inches from curb line and provide an area for settling and periodic removal of sediment and coarse material before flow dissipates to the remainder of the biofiltration area.
- Piped entrances, such as roof downspouts, should include rock, splash blocks, or other erosion controls at the entrance to dissipate energy and disperse flows.
- Woody plants (trees, shrubs, etc.) can restrict or concentrate flows and can be damaged by erosion around the root ball and must not be placed directly in the entrance flow path.

Drainage

Biofiltration areas must be designed to drain below the planting soil in less than 96 hours. Soils must be allowed to dry out periodically in order to restore hydraulic capacity to receive stormwater runoff from subsequent storm events, maintain infiltration rates, maintain adequate soil oxygen levels for healthy soil biota and vegetation, and provide proper soil conditions for biodegradation and retention of pollutants.

Underdrain

Biofiltration areas require an underdrain to collect and discharge stormwater runoff that has been filtered through the soil media, but not infiltrated, to another stormwater quality control measure, storm drain system, or receiving water. The underdrain must have a mainline diameter of eight inches using slotted PVC SDR 26 or PVC C9000. Slotted PVC allows for pressure water cleaning and root cutting, if necessary. The slotted pipe

should have two to four rows of slots cut perpendicular to the axis of the pipe or at right angles to the pitch of corrugations. Slots should be 0.04 to 0.1 inches wide with a length of 1 to 1.25 inches. Slots should be longitudinally-spaced such that the pipe has a minimum of one square inch opening per lineal foot and should face down.

The underdrain should be placed in a gravel envelope (Class 2 Permeable Material per Caltrans Spec. 68-1.025) that measures three feet wide and six inches deep. The underdrain is elevated from the bottom of the biofiltration area by six inches within the gravel envelope to create a fluctuating anaerobic/aerobic zone below the underdrain to facilitate denitrification within the anaerobic/anoxic zone and reduce nutrient concentrations. The top and sides of the underdrain pipe should be covered with gravel to a minimum depth of 12 inches. The underdrain and gravel envelope should be covered with a geomembrane liner to prevent clogging. The following aggregate should be used for the gravel envelope:

Particle Size (ASTM D422)	% Passing by Weight
¾ inch	100%
¼ inch	30-60%
#8	20-50%
#50	3-12%
#200	0-1%

Underdrains should be sloped at a minimum of 0.5 percent and must drain freely to an approved discharge point.

Rigid non-perforated observation pipes with a diameter equal to the underdrain diameter should be connected to the underdrain to provide a clean-out port as well as an observation well to monitor drainage rates. The wells/clean-outs should be connected to the perforated underdrain with the appropriate manufactured connections. The wells/clean-outs should extend six inches above the top elevation of the biofiltration area mulch, and should be capped with a lockable screw cap. The ends of underdrain pipes not terminating in an observation well/clean-out should also be capped.

Hydraulic Restriction Layer

Lateral infiltration pathways may need to be restricted due to the close proximity of roads, foundations, or other infrastructure. A geomembrane liner, or other equivalent waterproofing, may be placed along the vertical walls to reduce lateral flows. This geomembrane liner must have a minimum thickness of 30 mils and meet the requirements of Table E-12. Generally, waterproof barriers should not be placed on the bottom of the biofiltration unit, as this would prevent incidental infiltration which is important to meeting the required pollutant load reduction.

Table E-12. Geomembrane Liner Specifications for Biofiltration Areas

Parameter	Test Method	Specifications
Material		Nonwoven geomembrane liner
Unit weight		8 oz/yd^3 (minimum)
Filtration rate		0.08 in/sec (minimum)
Puncture strength	ASTM D-751 (Modified)	125 lbs (minimum)
Mullen burst strength	ASTM D-751	400 lb/in^2 (minimum)
Tensile strength	AST D-1682	300 lbs (minimum)
Equiv. opening size	US Standard Sieve	No. 80 (minimum)

Planting/Storage Media

- The planting media placed in the biofiltration area should achieve a long-term, in-place infiltration rate of at least 5 in/hr. Higher infiltration rates of up to 12 in/hr are permissible. The biofiltration soil media must retain sufficient moisture to support vigorous plant growth.
- The planting media mix must consist of 60 to 80 percent sand and 20 to 40 percent compost.
- Sand should be free of wood, waste, coatings such as clay, stone dust, carbonate, or any other deleterious material. All aggregate passing the No. 200 sieve size should be non-plastic. Sand for biofiltration should be analyzed by an accredited laboratory using #200, #100, #40, #30, #16, #8, #4, and 3/8 sieves (ASTM D422 or as approved by the local permitting authority) and meet the following gradations (Note: all sand complying with ASTM C33 for fine aggregate comply with the gradation requirements listed below):

Particle Size (ASTM D422)	% Passing by Weight
3/8 inch	100%
#4	90-100%
#8	70-100%
#16	40-95%
#30	15-70%
#40	5-55%
#110	0-15%
#200	0-5%

Note: The gradation of the sand component of the biofiltration soil media is believed to be a major factor in the infiltration rate of the media mix. If the desired hydraulic conductivity of the biofiltration soil media cannot be achieved within the specified proportions of sand and compost (#2), then it may be necessary to utilize sand at the coarser end of the range specified minimum percent passing.

- Compost should be a well-decomposed, stable, weed-free organic matter source derived from waste materials including yard debris, wood wastes, or other organic material not including manure or biosolids meeting standards developed by the USCC. The product shall be certified through the USCC STA Program (a compost testing and information disclosure program). Compost quality shall be verified via a laboratory analysis to be:
    - Feedstock materials must be specified and include one or more of the following: landscape/yard trimmings, grass clippings, food scraps, and agricultural crop residues.
    - pH between 6.5 and 8.0 (may vary with plant palette)
    - Organic Matter: 35 to 75 percent dry weight basis
    - Carbon and Nitrogen Ratio: 15:1 < C:N < 25:1
    - Maturity/Stability: Compost must have a dark brown color and a soil-like odor. Compost exhibiting a sour or putrid smell, containing recognizable grass or leaves, or is hot (120°F) upon delivery or rewetting is not acceptable.
    - Toxicity: any one of the following measures is sufficient to indicate non-toxicity:
        - NH_4:NH_3 < 3
        - Ammonium < 500 ppm, dry weight basis
        - Seed germination > 80 percent of control
        - Plant trials > 80 percent of control
        - Solvita® > 5 index value
    - Nutrient content:
        - Total Nitrogen content ≥ 0.9 percent preferred
        - Total Boron should be < 80 ppm; soluble boron < 2.5 ppm
    - Salinity: < 6.0 mmhos/cm
    - Compost for biofiltration area should be analyzed by an accredited laboratory using #200, ¼-inch, ½-inch, and 1-inch sieves (ASTM D422) and meet the gradation requirements in the table below:

Particle Size (ASTM D422)	% Passing by Weight
1 inch	99-100
½ inch	90-100
¼ inch	40-90
#200	2-10

Tests should be sufficiently recent to represent the actual material that is anticipated to be delivered to the site. If processes or sources used by the supplier have changed significantly since the most recent testing, new tests should be requested.

The gradation of compost used in biofiltration soil media is believed to play an important role in the saturated infiltration rate of the media. To achieve a higher saturated infiltration rate, it may be necessary to utilize compost at the coarser end of the range (minimum percent passing). The percent passing the #200 sieve (fines) is believed to be the most important factor in hydraulic conductivity.

In addition, coarser compost mix provides more heterogeneity of the biofiltration soil media, which is believed to be advantageous for more rapid development of soil structure needed to support healthy biological processes. This may be an advantage for plant establishment with lower nutrient and water input.

- Biofiltration soil media not meeting the above criteria should be evaluated on a case-by-case basis. Alternative biofiltration soil media must meet the following specifications:

  "Soils for biofiltration facilities must be sufficiently permeable to infiltrate stormwater runoff at a minimum of rate of 5 in/hr during the life of the facility, and provide sufficient retention of moisture and nutrients to support healthy vegetation." The following steps shall be followed by LACDPW to verify that alternative biofiltration soil media mixes meet the specification:

  - Submittals – The applicant must submit to LACDPW for approval:
    - A sample of mixed biofiltration soil media.
    - Certification from the soil supplier or an accredited laboratory that the biofiltration soil media meets the requirements of this specification.
    - Certification from an accredited geotechnical testing laboratory that the biofiltration soil media has an infiltration rate between 5 and 12 in/hr.
    - Organic content test results of the biofiltration soil media. Organic content test shall be performed in accordance with the Testing Methods for the Examination of Compost and Composting (TMECC) 05.07A, "Loss-On-Ignition Organic Matter Method".
    - Organic grain size analysis results of mixed biofiltration soil media performed in accordance with ASTM D422, Standard Test Method for Particle Size Analysis of Soils.
    - A description of the equipment and methods used to mix the sand and compost to produce the biofiltration soil media.
  - The name of the testing laboratory(ies) and the following information:

- Contact person(s)
- Address(es)
- Phone contact(s)
- E-mail address(es)
- Qualifications of laboratory(ies) and personnel including date of current certification by STA, ASTM, or approved equal.

o Biofiltration soils shall be analyzed by an accredited laboratory using #200 and ½-inch sieves (ASTM D422 or as approved by LACDPW), and meet the gradation described in the table below:

Particle Size (ASTM D422)	% Passing by Weight
½ inch	97-100
#200	2-5

- Biofiltration soil media shall be analyzed by an accredited geotechnical laboratory for the following tests:
  - o Moisture – density relationships (compaction tests) must be conducted on biofiltration soil media. Biofiltration soil media for the permeability test shall be compacted to 85 to 90 percent of the maximum dry density (ASTM D1557).
  - o Constant head permeability testing in accordance with ASTM D2434 shall be conducted on a minimum of two samples with a 6-inch mold and vacuum saturation.
- Mulch is recommended for the purpose of retaining moisture, preventing erosion, and minimizing weed growth. Projects subject to the California Model Water Efficiency Landscaping Ordinance (or comparable local ordinance) will be required to provide at least 2 inches of mulch. Aged mulch, also called compost mulch, reduces the ability of weeds to establish, keeps soil moist, and replenishes soil nutrients. Biofiltration areas must be covered with two to four inches (average three inches) of mulch at the start and an annual placement (preferably in June after weeding) of one to two inches of mulch beneath plants.
- The planting media design height must be marked appropriately, such as a collar on the overflow device or with a stake inserted two feet into the planting media and notched, to show biofiltration surface level and ponding level.

Vegetation

Prior to installation, a licensed landscape architect must certify that all plants, unless otherwise specifically permitted, conform to the standards of the current edition of American Standard for Nursery Stock as approved by the American Standards Institute, Inc. All plant grades shall be those established in the current edition of American Standards for Nursery Stock.

- Shade trees must have a single main trunk. Trunks must be free of branches below the following heights:

CALIPER (in)	Height (ft)
1½-2½	5
3	6

- Plants must be tolerant of summer drought, ponding fluctuations, and saturated soil conditions for 96 hours.
- It is recommended that a minimum of three types of tree, shrubs, and/or herbaceous groundcover species be incorporated to protect against facility failure due to disease and insect infestations of a single species.
- Native plant species and/or hardy cultivars that are not invasive and do not require chemical inputs must be used to the maximum extent practicable.

The biofiltration area should be vegetated to resemble a terrestrial forest community ecosystem, which is dominated by understory trees, a shrub layer, and herbaceous ground cover. Select vegetation that:

- Is suited to well-drained soil;
- Will be dense and strong enough to stay upright, even in flowing water;
- Has minimum need for fertilizers;
- Is not prone to pests and is consistent with Integrated Pest Management practices; and
- Is consistent with local water conservation ordinance requirements.

Irrigation System

Provide an irrigation system to maintain viability of vegetation, if applicable. The irrigation system must be designed to local code or ordinance specifications.

Restricted Construction Materials

The use of pressure-treated wood or galvanized metal at or around a biofiltration area is prohibited.

Overflow Device

An overflow device is required at the 18-inch ponding depth. The following, or equivalent, should be provided:

- A vertical PVC pipe (SDR 26) to act as an overflow riser.
- The overflow riser(s) should be eight inches or greater in diameter, so it can be cleaned without damage to the pipe.

- The inlet to the riser should be at the ponding depth (18 inches for fenced biofiltration areas and 6 inches for areas that are not fenced), and be capped with a spider cap to exclude floating mulch and debris. Spider caps should be screwed in or glued (e.g., not removable). The overflow device should convey stormwater runoff in excess of 1.5 times the SWQDv that is not reliably retained on the project site to an approved discharge location (another stormwater quality control measure, storm drain system, or receiving water).

Maintenance Requirements

Maintenance and regular inspections are important for proper function of biofiltration areas. Biofiltration areas require annual plant, soil, and mulch layer maintenance to ensure optimal infiltration, storage, and pollutant removal capabilities. In general, biofiltration maintenance requirements are typical landscape care procedures and include:

- Irrigate plants as needed during prolonged dry periods. In general, plants should be selected to be drought-tolerant and not require irrigation after establishment (two to three years).
- Inspect flow entrances, ponding area, and surface overflow areas periodically, and replace soil, plant material, and/or mulch layer in areas if erosion has occurred. Properly-designed facilities with appropriate flow velocities should not cause erosion except potentially during in extreme events. If erosion occurs, the flow velocities and gradients within the biofiltration area and flow dissipation and erosion protection strategies in the pretreatment area and flow entrance should be reassessed. If sediment is deposited in the biofiltration area, identify the source of the sediment within the tributary area, stabilize the source, and remove excess surface deposits.
- Prune and remove dead plant material as needed. Replace all dead plants, and if specific plants have a high mortality rate, assess the cause and, if necessary, replace with more appropriate species.
- Remove weeds as needed until plants are established. Weed removal should become less frequent if the appropriate plant species are used and planting density is attained.
- Select the proper soil mix and plants for optimal fertility, plant establishment, and growth to preclude the use of nutrient and pesticide supplements. By design, biofiltration facilities are located in areas where phosphorous and nitrogen levels are often elevated such that these should not be limiting nutrients. Addition of nutrients and pesticides may contribute pollutant loads to receiving waters.
- In areas where heavy metals deposition is likely (i.e., tributary areas to industrial, vehicle dealerships/repair, parking lots, roads), replace mulch annually. In areas where metals deposition is less likely (i.e., residential lots), replace or add mulch as needed to maintain a two to three inch depth at least once every two years.

- Analyze soil for fertility and pollutant levels if necessary. Biofiltration soil media are designed to maintain long-term fertility and pollutant processing capability.
- Eliminate standing water to prevent vector breeding.
- Inspect overflow devices for obstructions or debris, which should be removed immediately. Repair or replace damaged pipes upon discovery.
- Inspect, and clean if necessary, the underdrain.

A summary of potential problems that need to be addressed by maintenance activities is presented in Table E-13.

The County requires execution of a maintenance agreement to be recorded by the property owner for the on-going maintenance of any privately-maintained stormwater quality control measures. The property owner is responsible for compliance with the maintenance agreement. A sample maintenance agreement is presented in Appendix H.

Table E-13. Biofiltration Troubleshooting Summary

Problem	Conditions When Maintenance Is Needed	Maintenance Required
Vegetation	Overgrown vegetation	Mow and prune vegetation as appropriate.
	Presence of invasive, poisonous, nuisance, or noxious vegetation or weeds	Remove this vegetation and plant native species as needed.
Trash and Debris	Trash, plant litter, and dead leaves present	Remove and properly dispose of trash and debris.
Irrigation (if applicable)	Not functioning correctly	Check irrigation system for clogs or broken lines and repair as needed.
Inlet/Overflow	Inlet/overflow areas clogged with sediment and/or debris	Remove material.
	Overflow pipe blocked or broken	Repair as needed.
Erosion/Sediment Accumulation	Splash pads or spreader incorrectly placed Presence of erosion or sediment accumulation	Check inlet structure to ensure proper function. Repair, or replace if necessary, the inlet device. Repair eroded areas with gravel as needed. Re-grade the biofiltration area as needed.
Contaminants and Pollution	Any evidence of oil, gasoline, contaminants, or other pollutants	Remove any evidence of visual contamination from floatables such as oil and grease.
Standing water	Standing water observed more than 96 hours after storm event	Inspect, and clean as needed, the underdrain to ensure proper function. Clear clogs as needed. Remove and replace planter media (sand, gravel, topsoil, mulch) and vegetation.

INSTALLATION NOTES

1. CONTRACTOR TO PROVIDE ALL LABOR, EQUIPMENT, MATERIALS AND INCIDENTALS REQUIRED TO OFFLOAD AND INSTALL THE SYSTEM AND APPURTENANCES IN ACCORDANCE WITH THIS DRAWING AND THE MANUFACTURERS SPECIFICATIONS, UNLESS OTHERWISE STATED IN MANUFACTURERS CONTRACT.
2. MANUFACTURER RECOMMENDS A MINIMUM 6"LEVEL ROCK BASE UNLESS SPECIFIED BY THE PROJECT ENGINEER. CONTRACTOR IS RESPONSIBLE TO VERIFY PROJECT ENGINEERS RECOMMENDED BASE SPECIFICATIONS.
3. ALL PIPES MUST BE FLUSH WITH INSIDE SURFACE OF CONCRETE. (PIPES CANNOT INTRUDE BEYOND FLUSH).
4. INVERT OF OUTFLOW PIPE MUST BE FLUSH WITH DISCHARGE CHAMBER FLOOR.
5. ALL GAPS AROUND PIPES SHALL BE SEALED WATER TIGHT WITH A NON-SHRINK GROUT PER MANUFACTURERS STANDARD CONNECTION DETAIL AND SHALL MEET OR EXCEED REGIONAL PIPE CONNECTION STANDARDS.
6. CONTRACTOR RESPONSIBLE FOR INSTALLATION OF ALL RISERS, MANHOLES, AND HATCHES. CONTRACTOR TO GROUT ALL MANHOLES AND HATCHES TO MATCH FINISHED SURFACE UNLESS SPECIFIED OTHERWISE.

GENERAL NOTES

1. MANUFACTURER TO PROVIDE ALL MATERIALS UNLESS OTHERWISE NOTED.
2. ALL DIMENSIONS, ELEVATIONS, SPECIFICATIONS AND CAPACITIES ARE SUBJECT TO CHANGE. FOR PROJECT SPECIFIC DRAWINGS DETAILING EXACT DIMENSIONS, WEIGHTS AND ACCESSORIES PLEASE CONTACT MANUFACTURER.

MWS – Linear

Hybrid Stormwater Filtration System

Save valuable space with small footprint for urban sites.

Improve BMP aesthetics with attractive native and tropical landscape plants.

Reduce lifetime costs with safer and less expensive maintenance

"The MWS – Linear hybrid stormwater treatment system is described as a self contained treatment train. This system utilizes an innovative combination of l treatment processes. Stormwater runoff flows into the system via pipe or curb/grate type catch basin opening. Polluted runoff first encounters a screening device to remove larger pollutants and then enters a hydrodynamic separation chamber which settles out the sediments and larger suspended solids. Next the runoff is treated by a revolutionary filter media, BioMediaGREEN that removes fines and associated pollutants, including bacteria. From there runoff enters of bioretention filter in the form of a subsurface flow vegetated gravel wetland. Within the wetland physical, chemical, and biological mechanisms remove the remaining particulate and dissolved pollutants. The purified runoff leaves the system via the discharge chamber. In the discharge chamber the rate of discharge is controlled by valves set to a desired rate".

Tested Pollutant Removal Efficiencies:

TSS Removal	Dissolved Lead Removal	Dissolved Copper Removal	TPH	E. coli Removal	Turbidity Removal
98%	81%	92%	99%	60.2%	92%

"Nature and Harmony Working Together in Perfect Harmony"

SPECIFICATIONS – MWS- LINEAR

Track Record: The MWS- Linear Hybrid Stormwater Treatment System is manufactured by a company whom is regularly engaged in the engineering design and production of treatment systems for stormwater.

Coverage: The MWS- Linear is designed to treat the water quality volume or water quality flow. For flow based design, high flow bypass is internal, for volume based design, high flow bypass is external and prior to pre-detention system. For offline volume based designs the MWS - Linear has the ability to treat the entire water quality volume when used with pre-storage and properly sized.

Non-Corrosive Materials: The MWS – Linear is designed with non-corrosive materials. All internal piping is SD35 PVC. Catch basin filter components, including mounting hardware, fasteners, support brackets, filtration material, and support frame are constructed of non-corrosive materials (316 stainless steel, and UV protected/marine grade fiberglass). Fasteners are stainless steel. Primary filter mesh is 316 stainless steel welded screens. Filtration basket screens for coarse, medium and fine filtration is ¾" x 1 ¾"expanded, 10 x 10 mesh, and 35 x 35 mesh, respectively. No polypropylene, monofilament netting or fabrics shall be used in this system. Media Protective Panels are constructed of UV protected/marine grade fiberglass. Mounts are constructed of stainless steel. BioMediaGREEN is an inert rock substrate and is non-corrosive. Perimeter filter structure is constructed of lightweight injection molded plastic. Mounting brackets are constructed of SD40 PVC and are mounted with 3/8" diameter stainless steel redheads. Drain down filter cover is constructed of UV protected/marine grade fiberglass and stainless steel hinge and mount.

Weight: Each complete unit weighs approximately 29,000 to 40,000 pounds and requires a boom crane to install. Details of this are provided in the installation section of the MWS-Linear Design Kit.

Transportation: The Modular Wetland System – Linear is designed to be transported on a standard flat bed truck. The unit easily fits on a flat bed truck without the need of special permitting.

Alternative Technology Configurations: The Modular Wetland System – Linear is modular is design. Each module will be up to 22 feet long and 5 feet wide. The system can be made in lengths varying from 13 to 100s of feet long. For lengths longer than 22 feet the system will shipped in modules and assembled on site. The Modular Wetland System – Linear has many alternative configurations. This allows the system to be adapted to many site conditions. Runoff can enter the system through a pipe, and/or a built in curb or grate type opening.

Energy Requirements: The Modular Wetland System – Linear is completely passive and requires no external energy sources.

Buoyancy Issues: Buoyancy is only a an issue when ground water levels rise above the bottom of the Modular Wetland System – Linear's concrete structure. With 8.5 cubic yards of wetland media there is no concern of floatation. As a precaution a footing can also be built into the systems concrete structure.

Durability: The structure of the box will be precast concrete. The concrete will be 28 day compressive strength fc = 5,000 psi. Steel reinforcing will be ASTM A – C857. Structure will support an H20 loading as indicted by AASHTO. The joint between the concrete sections will ship lap and joint sealed with ram-nek. Filter (excluding oil absorbent media) and support structures are of proven durability. The filter and mounting structures are of sufficient strength to support water, sediment, and debris loads when the filter is full, with no slippage, breaking, or tearing. All filters are warranted for a minimum of five (5) years.

Oil Absorbent Media: The MWS – Linear utilizes both physical and biological mechanisms to capture and filter oil and grease. A skimmer and boom system will be positioned on the internal perimeter of the catch basin insert. The primary filtration media, BioMediaGreen, utilized in the perimeter and drain down filters, has excellent hydrocarbon removal abilities. Within the wetland filter biological processes capture and

break down oil and grease. Much of the breakdown and transformation of oil and grease is performed by natural occurring bacteria.

Overflow Protection: The grate and curb type MWS – Linear are designed with an internal bypass consisting of two SD PVC pipes which direct high flows around the perimeter and wetland filter, directly into the discharge chamber. For the volume based vault type configuration, bypass should be located prior to the pre-detention system. For peak flows that exceed internal bypass capacity, external bypass is use.

Filter Bypass: Runoff will bypass filtration (BioMediaGREEN and wetland filter) components of the MWS - Linear. The system will still provide screening and settling during higher flow rates for internally bypassed flows. External bypass will bypass of treatment processes.

Pollutant Removal Efficiency: The MWS - Linear is capable of removing over 90% of the net annual total suspended solids (TSS) load based on a 20-micron particle size. Annual TSS removal efficiency models are based on documented removal efficiency performance from full-scale laboratory tests on BioMediaGreen and quarter-scale laboratory tests on the MWS – Linear flow based system.

POLLUTANT	REMOVAL EFFICIENCY
Trash & Litter	99%
TPH (mg/L)	99%
TSS (mg/L)	98%
E. Coli (MPN/100ml)	60%
Turbidity (NTU)	92%
Dissolved Metals (mg/L)	76%

Sil-Co-Sil 106. Mean particle diameter = 19 microns

Non-Scouring: During heavy storm events the runoff bypasses perimeter and wetland filter components. The system will not re-suspend solids at design flows.

Uniqueness: The Modular Wetland System – Linear is a complete self contained treatment train that incorporates capture, screening, sedimentation, filtration, bioretention, high flow bypass, and flow control into a single modular structure. This system provides four stages of treatment making it the only 4 stage treatment train stormwater filtration system, therefore making it unique to the industry. Other systems do not incorporate all the necessary attributes to make it a complete stormwater management device as with the Modular Wetland System – Linear. Therefore, no equal exists for this system.

Pretreatment & Preconditioning: Since the Modular Wetland System – Linear is a complete capture and treatment train stormwater management system no external pretreatment of preconditioning is necessary.

SPECIFICATIONS – BioMediaGREEN

BioMediaGREEN is a proprietary engineered filter media. Made of a unique combination of the inert naturally occurring material this product is non-combustible and do not pose a fire hazard, stable and non-reactive, and is also biodegradable. It is stable with no known adverse environmental effects.

This product has been tested in long-term carcinogenicity studies [inhalation and intraperitoneal injection (i.p.)] with no significant increase in lung tumors or abdominal tumors. Short-term biopersistent (inhalation and intra-tracheal injection) studies have shown that the products disappear very rapidly from the lung.

In October 2001, IARC classified this product as Group 3, "not classifiable as to its carcinogenicity to humans". The 2001 decision was based on the latest epidemiological studies and animal inhalation studies that show no relation between inhalation exposure and the development of tumors.

The product can typically be disposed of in an ordinary landfill (local regulations may apply). If you are unsure of the regulations, contact your local Public Health Department or the local office of the Environmental Protection Agency (EPA).

Coverage: When properly installed BioMediaGREEN Filter Blocks provide sufficient contact time, at rated flows, of passing contaminate water. The BioMediaGREEN material will capture and retain most pollutants that pass through it. The BioMediaGREEN material is made of a proprietary blend of inert substances. The BioMediaGREEN Filter Blocks can be used in different treatment devices, including but not limited to flume filters, trench drain filters, downspout filters, catch basin inserts, water polishing units, and hydrodynamic separators.

Non-Corrosive Materials: The BioMediaGreen material is made of non-corrosive materials.

Durability: The BioMediaGREEN material has been chosen for its proven durability, with an expected life of 2 plus years. The BioMediaGREEN material is of sufficient strength to support water, sediment, and debris loads when the media is at maximum flow; with no slippage, breaking, or tearing. The BioMediaGREEN material has been tested through rigorous flow and loading conditions.

Oil Absorbent Media: The BioMediaGREEN material has been proven to capture and retain hydrocarbons.

Pollutant Removal Efficiency: The BioMediaGREEN Filter Blocks are designed to capture high levels of Hydrocarbons including but not limited to oils & grease, gasoline, diesel, and PAHs. BioMediaGREEN Filter Blocks have the physical ability to block and filter trash and litter, grass and foliage, sediments, TSS, particulate and dissolved metals, nutrients, and bacteria.

BioMediaGREEN technology is based on a proprietary blend of synthetic inert natural substances aimed at removal of various stormwater pollutants. BioMediaGREEN was created to have a very porous structure capable of selectively removing pollutants while

allowing high flow through rates for water. As pollutants are captured by its structure, BioMediaGREEN captures most pollutants and maintains porosity and filtering capabilities.

Field and laboratory tests have confirmed the BioMediaGREEN capability to capture large percentage of TSS, hydrocarbons, nutrients, and heavy metals. Microbial reduction efficiency will vary depending on colony size, flow rates and site specific conditions.

POLLUTANT	REMOVAL EFFICIENCY
Oil & Grease (mg/L)	90%
TPH (mg/L)	99%
TSS (mg/L)	85%
Turbidity (NTU)	99%
Total Phosphorus (mg/L)	69.6%
Dissolved Metals (mg/L)	75.6%

Sil-Co-Sil 106. Mean particle diameter = 19 microns

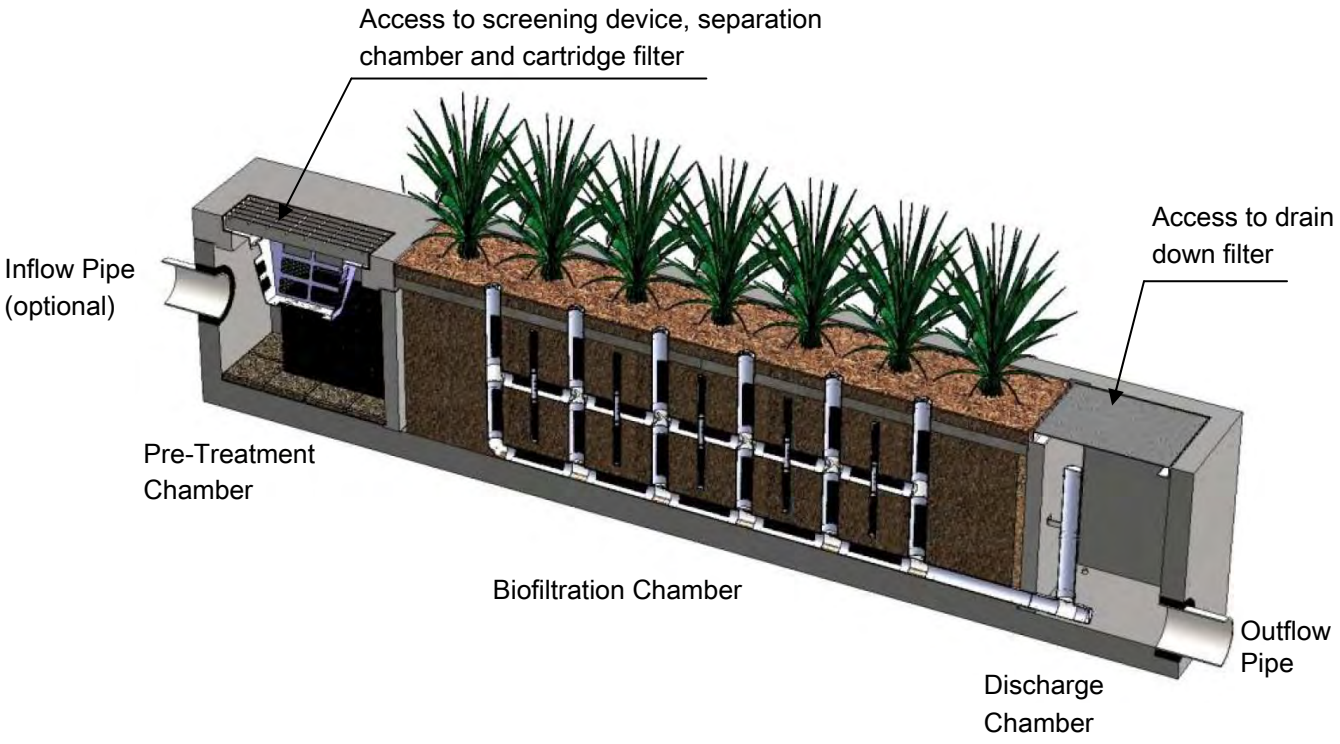
Replacement: Removal and replacement of the blocks is simple. Remove blocks from filtration system. Replace with new block of equal size.

Maintenance Guidelines for Modular Wetland System - Linear

Maintenance Summary

- Remove Trash from Screening Device – average maintenance interval is 6 to 12 months.
  - (*5 minute average service time*).
- Remove Sediment from Separation Chamber – average maintenance interval is 12 to 24 months.
  - (*10 minute average service time*).
- Replace Cartridge Filter Media – average maintenance interval 12 to 24 months.
  - (*10-15 minute per cartridge average service time*).
- Replace Drain Down Filter Media – average maintenance interval is 12 to 24 months.
  - (*5 minute average service time*).
- Trim Vegetation – average maintenance interval is 6 to 12 months.
  - (*Service time varies*).

System Diagram



Maintenance Procedures

Screening Device

1. Remove grate or manhole cover to gain access to the screening device in the Pre-Treatment Chamber. Vault type units do not have screening device. Maintenance can be performed without entry.
2. Remove all pollutants collected by the screening device. Removal can be done manually or with the use of a vacuum truck. The hose of the vacuum truck will not damage the screening device.
3. Screening device can easily be removed from the Pre-Treatment Chamber to gain access to separation chamber and media filters below. Replace grate or manhole cover when completed.

Separation Chamber

1. Perform maintenance procedures of screening device listed above before maintaining the separation chamber.
2. With a pressure washer spray down pollutants accumulated on walls and cartridge filters.
3. Vacuum out Separation Chamber and remove all accumulated pollutants. Replace screening device, grate or manhole cover when completed.

Cartridge Filters

1. Perform maintenance procedures on screening device and separation chamber before maintaining cartridge filters.
2. Enter separation chamber.
3. Unscrew the two bolts holding the lid on each cartridge filter and remove lid.
4. Remove each of 4 to 8 media cages holding the media in place.
5. Spray down the cartridge filter to remove any accumulated pollutants.
6. Vacuum out old media and accumulated pollutants.
7. Reinstall media cages and fill with new media from manufacturer or outside supplier. Manufacturer will provide specification of media and sources to purchase.
8. Replace the lid and tighten down bolts. Replace screening device, grate or manhole cover when completed.

Drain Down Filter

1. Remove hatch or manhole cover over discharge chamber and enter chamber.
2. Unlock and lift drain down filter housing and remove old media block. Replace with new media block. Lower drain down filter housing and lock into place.
3. Exit chamber and replace hatch or manhole cover.

Maintenance Notes

1. Following maintenance and/or inspection, it is recommended the maintenance operator prepare a maintenance/inspection record. The record should include any maintenance activities performed, amount and description of debris collected, and condition of the system and its various filter mechanisms.

2. The owner should keep maintenance/inspection record(s) for a minimum of five years from the date of maintenance. These records should be made available to the governing municipality for inspection upon request at any time.

3. Transport all debris, trash, organics and sediments to approved facility for disposal in accordance with local and state requirements.

4. Entry into chambers may require confined space training based on state and local regulations.

5. No fertilizer shall be used in the Biofiltration Chamber.

6. Irrigation should be provided as recommended by manufacturer and/or landscape architect. Amount of irrigation required is dependent on plant species. Some plants may require irrigation.

Maintenance Procedure Illustration

Screening Device

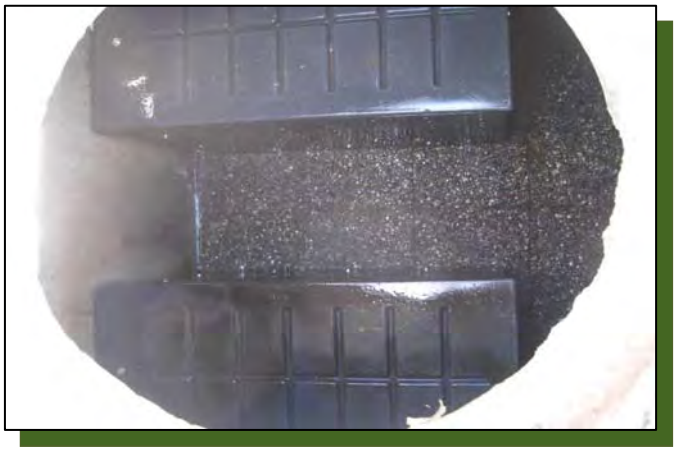
The screening device is located directly under the manhole or grate over the Pre-Treatment Chamber. It's mounted directly underneath for easy access and cleaning. Device can be cleaned by hand or with a vacuum truck.

Separation Chamber

The separation chamber is located directly beneath the screening device. It can be quickly cleaned using a vacuum truck or by hand. A pressure washer is useful to assist in the cleaning process.

Cartridge Filters

The cartridge filters are located in the Pre-Treatment chamber connected to the wall adjacent to the biofiltration chamber. The cartridges have removable tops to access the individual media filters. Once the cartridge is open media can be easily removed and replaced by hand or a vacuum truck.



Drain Down Filter

The drain down filter is located in the Discharge Chamber. The drain filter unlocks from the wall mount and hinges up. Remove filter block and replace with new block.

Trim Vegetation

Vegetation should be maintained in the same manner as surrounding vegetation and trimmed as needed. No fertilizer shall be used on the plants. Irrigation per the recommendation of the manufacturer and or landscape architect. Different types of vegetation requires different amounts of irrigation.

Inspection Checklist

Modular Wetland System Type (Curb, Grate or UG Vault): _____ Size (22', 14' or etc.): _____

Structural Integrity:	**Yes**	**No**	**Comments**
Damage to pre-treatment access cover (manhole cover/grate) or cannot be opened using normal lifting pressure?			
Damage to discharge chamber access cover (manhole cover/grate) or cannot be opened using normal lifting pressure?			
Does the MWS unit show signs of structural deterioration (cracks in the wall, damage to frame)?			
Is the inlet/outlet pipe or drain down pipe damaged or otherwise not functioning properly?			
Working Condition:			
Is there evidence of illicit discharge or excessive oil, grease, or other automobile fluids entering and clogging the unit?			
Is there standing water in inappropriate areas after a dry period?			
Is the filter insert (if applicable) at capacity and/or is there an accumulation of debris/trash on the shelf system?			
Does the depth of sediment/trash/debris suggest a blockage of the inflow pipe, bypass or cartridge filter? If yes, specify which one in the comments section. Note depth of accumulation in in pre-treatment chamber.			Depth:
Does the cartridge filter media need replacement in pre-treatment chamber and/or discharge chamber?			Chamber:
Any signs of improper functioning in the discharge chamber? Note issues in comments section.			
Other Inspection Items:			
Is there an accumulation of sediment/trash/debris in the wetland media (if applicable)?			
Is it evident that the plants are alive and healthy (if applicable)? Please note Plant Information below.			
Is there a septic or foul odor coming from inside the system?			

Waste:	**Yes**	**No**
Sediment / Silt / Clay		
Trash / Bags / Bottles		
Green Waste / Leaves / Foliage		

Recommended Maintenance	
No Cleaning Needed	
Schedule Maintenance as Planned	
Needs Immediate Maintenance	

Plant Information	
Damage to Plants	
Plant Replacement	
Plant Trimming

Catch Basin Cleaning

OPERATION & MAINTENANCE PLAN
FOR FILTER INSERT

The maintenance program will include the following key components:

1. **REGULAR SWEEPING AND REMOVAL OF DEBRIS:**
   Vehicle parking lot will be swept on a regular basis. Sediment and debris (litter, leaves, papers and cans, etc.) within the area, especially around the drainage inlet, will be collected and removed. The frequency of sweeping will be based on the amount of sediment and debris generated.

2. **REGULAR INSPECTIONS:**
   The catch basin, downspout, or trench drain filter insert will be inspected on a regular basis. The frequency of inspection will be based on pollutant loading, amount of debris, leaves, etc., and amount of runoff. At a minimum, there will be three inspections per year.

3. **CONDUCT OF THE VISUAL INSPECTION:**
   a. Broom sweep around the inlet and remove the inlet grate.
   b. Inspect the filter liner for serviceability. If called for, the filter body will be replaced.
   c. Check the condition of the adsorbent pouches and visually check the condition of the enclosed adsorbent. If the surface of the granules is more than 50% coated with a dark gray or black substance, the pouches will be replaced with new ones.
   d. Check for loose or missing nuts (on some models) and gaps between the filter and the inlet wall, which would allow bypass of the filter during low flows.
   e. The filter components will be replaced in the inlet and the grate replaced.

4. **CLEANING OUT THE FILTER INSERT:**
   Regardless of the model of filter insert, the devices must be cleaned out on a recurring basis. The manufacturer recommends at least three cleanings per year – more in high exposure areas. For the Flo-Gard+Plus filters, the filter must be cleaned when the solids level reaches close to the fullel tip.
   a. The Standard Filter, in most cases, can be cleaned out by removing the device from the inlet and dumping the contents into a DOT approved drum for later disposal. If the oil-absorbant pouches need to be changed, the time to change them is immediately after dumping and before the filter is replaced in the inlet.
   b. Because of weight, method of installation and so forth, some filter inserts will be cleaned with the aid of a vactor truck. If necessary, the oil-absorbant pouches will be changed after the pollutants have been removed and as the filter is being returned to service.

5. **MAINTENANCE LOG:**
   Keep a log of all inspections and maintenance performed on the catch basins, trench drains, and filter inserts. Keep this log on-site.

Dear Ms. Prijatel:

Presented herein is Alta California Geotechnical, Inc.'s (Alta) geotechnical investigation report for the proposed residential development located at 930 West Compton Boulevard, in the City of Compton, California. This report is based on a recent subsurface investigation conducted by Alta, laboratory testing and review of the referenced reports.

Also included in this report are:

- Discussion of the site geotechnical conditions;
- Recommendations for remedial and site grading, including unsuitable soil removals;
- Geotechnical site construction recommendations;
- Preliminary foundation design parameters.

If you have any questions or should you require any additional information, please contact the undersigned at (951) 509-7090. Alta appreciates the opportunity to provide geotechnical consulting services for your project.

Sincerely,
Alta California Geotechnical, Inc.

1.0 INTRODUCTION

The following report presents Alta's findings, conclusions, and geotechnical recommendations for the proposed residential development located at 930 West Compton Boulevard, in the City of Compton, California.

1.1 Purpose

The purpose of this report is to examine the existing onsite geotechnical conditions and assess the impacts that the geotechnical conditions may have on the proposed development. The property is depicted on the enclosed Plate 1. This report is suitable for use in developing grading plans and engineer's cost estimates.

1.2 Scope of Work

Alta's *Scope of Work* for this geotechnical investigation included the following:

- Review of the referenced literature, maps, reports and aerial photos (Appendix A);
- Site geologic mapping;
- Excavating, logging, and sampling five (5) hollow-stem auger borings to a maximum depth of 51.5-feet below the existing surface (Appendix B);
- Conducting laboratory testing on samples obtained during our investigation (Appendix C);
- Performing an infiltration study on an additional boring, five (5) feet in depth, to provide an assessment of the infiltration characteristics of the onsite soil and their impact on storm water disposal;
- Conducting a liquefaction analysis;
- Evaluating engineering geologic and geotechnical engineering data, including laboratory data, to develop recommendations for site remedial grading, import soil, foundations and utilities;
- Preparing this report and accompanying exhibits.

1.3 Report Limitations

The conclusions and recommendations presented in this report are based on the field and laboratory information generated during this investigation, and a review of the referenced reports. The information contained in this report is intended to be used for development of grading plans and preliminary construction cost estimates.

2.0 PROJECT DESCRIPTION

2.1 Site Location and Existing Conditions

The property consists of a rectangular-shaped, 2.45± -acre parcel located at 930 West Compton Boulevard, in the City of Compton, California. Currently, the site is a vacant lot and is relatively flat. The site is bounded to the north by West Compton Boulevard, to the east by Kemp Avenue, to the south by 151st Street, and to the west by Dwight Avenue.

A review of aerial photos (Historic Aerials, 2019) indicates that the lot was vacant up until the 1970s where it was graded for the construction of a hospital. The hospital was demolished around 2004 and the lot has remained vacant since.

2.2 Proposed Development

It is our understanding that site will be developed into a residential development to support 24 homes with associated improvements. Alta anticipates that conventional cut-and-fill grading techniques will be used to develop the site. This grading will support residential structures consisting of wood frame construction with shallow foundations and reinforced concrete slabs-on-grade, and associated improvements. Design cuts and fills onsite are anticipated to be five feet or less.

3.0 SITE INVESTIGATION

3.1 Current Subsurface Investigation

Alta conducted a subsurface investigation on April 18, 2019 consisting of the excavation, logging and select sampling of five (5) hollow-stem auger borings up to a maximum depth of 51.5 feet below the existing ground surface and the installation of one (1) five-foot deep well for infiltration testing. The locations of the exploratory excavations are shown on Plate 1 and the boring logs are presented in Appendix B.

Laboratory testing was performed on bulk and ring samples obtained during the field investigation. A brief description of the laboratory test procedures and the test results are presented in Appendix C.

3.2 Infiltration Testing

It is Alta's understanding that the site may utilize infiltration systems for storm water disposal. Details of the system are not known at this time.

Infiltration testing was undertaken using one, five (5) foot-deep boring (P-1) as shown on Plate 1. The testing was performed on April 19, 2019 in general conformance with the County of Los Angeles for WQMP. The test well was presoaked for 24 hours prior to testing and the water level readings were recorded every 30 minutes until the readings stabilized.

The data was then adjusted to provide an infiltration rate utilizing the Porchet Method. The resulting infiltration rate for P-1 is 0.13 inches per hour, with no factor of safety, as summarized in Table 3-1. Recommendations for infiltration BMP design are presented in Section 6.3.

Table 3-1 Summary of Infiltration Testing (No Factor of Safety)	
Test Designation	P-1
Approximate Depth of Test	5.0 ft
Final Time Interval	30 minutes
Radius of Test Hole	4 inches
Tested Infiltration Rate	0.13 inches/hr

4.0 GEOLOGIC CONDITIONS

4.1 Geologic and Geomorphic Setting

Regionally, the subject site is located in the Peninsular Ranges geomorphic province, which characterizes the southwest portion of southern California where major right-lateral active fault zones predominately trend northwest-southeast. The Peninsular Ranges province is composed of plutonic and metamorphic rock, with lesser amounts of Tertiary volcanic and sedimentary rock, Quaternary drainage in-fills and sedimentary veneers.

4.2 Stratigraphy

Based on Alta's review of geologic literature and our subsurface investigation, the project site is underlain by undocumented artificial fills and young Quaternary alluvium. The geologic units are briefly described below.

4.2.1 Artificial Fill (Map symbol af)

Artificial fill was found in the upper two (2) to five (5) feet. It consists of light to dark brown, silty clay in a dry to moist, stiff condition, with some areas containing concrete cobbles up to 11 inches in diameter.

4.2.2 Young Quaternary Alluvium (Map symbol Qya)

Young Quaternary alluvium underlies the artificial fill which consist of light brown to brown, tan with some orange mottling, silty clay, clayey silt, sandy silt, sand, and silt in a moist, stiff to very stiff and medium

dense to dense condition. The unit was logged to a maximum depth of 51.5 feet below the ground surface.

4.3 Geologic Structure

4.3.1 Tectonic Framework

Jennings and Bryant (2010) defined eight structural provinces within California that have been classified by predominant regional fault trends and similar fold structure. These provinces are in turn divided into blocks and sub-blocks that are defined by "major Quaternary faults." These blocks and sub-blocks exhibit similar structural features. Within this framework the site is located within Structural Province I, which is controlled by the dominant northwest trend of the San Andreas Fault and is divided into two blocks, the Coast Range Block and the Peninsular Range Block. The Peninsular Range Block, on which the site is located, is characterized by a series of parallel, northwest trending faults that exhibit right lateral dip-slip movement. These faults are terminated by the Transverse Range block to the north and extend southward to the Baja Peninsula. These northwest trending faults divide the Peninsular Range block into eight sub-blocks. The site is located on the Santa Ana sub-block, which is bound on the east by the Whittier-Elsinore fault zone and on the west by Newport-Inglewood fault zone.

4.3.2 Regionally Mapped Active Faults

Several large, active fault systems, including the Whittier-Elsinore, the Newport-Inglewood, and the San Andreas, occur in the region surrounding the site. These fault systems have been studied extensively and in a large part control the geologic structure of southern California.

4.3.3 Geologic Structure

Based upon our site investigation and literature review, the onsite sediments are of Quaternary age, and are not fractured, folded, or faulted.

4.4 Groundwater

Groundwater was not encountered to a depth of 51.5 feet below the ground surface during our subsurface investigation. Based on state-provided information, the historic-high groundwater is ten (10) feet below the ground surface (CDMG, 1998).

4.5 Earthquake Hazards

The subject site is located in southern California, which is a tectonically active area. The type and magnitude of seismic hazards affecting a site are dependent on the distance to the causative fault and the intensity and magnitude of the seismic event. The seismic hazard may be primary, such as surface rupture and/or ground shaking, or secondary, such as liquefaction and/or ground lurching.

4.5.1 Local and Regional Faulting

The site is located on the Santa Ana sub-block, approximately 1.3 miles east of the Newport-Inglewood fault zone, 4.9 miles south west of the Puente Hills fault zone, 9.1 miles north 0f the Palos Verdes fault zone, 11.3 miles south of the Elysian Park fault zone, and 13.1 miles southwest of the Whittier-Elsinore fault zone.

4.5.2 Seismicity

Ground shaking hazards caused by earthquakes along other active regional faults do exist. The 2016 California Building Code requires use-modified spectral accelerations and velocities for most structural designs.

Seismic design parameters using soil profile types identified in the 2016 California Building Code are presented in Section 7.3.

4.5.3 Surface Rupture

Active faults are not known to exist within the project and a review of Special Publication 42 indicates the site is not within a California State designated Alquist-Priolo earthquake fault zone. Accordingly, the potential for fault surface rupture on the subject site is very low.

4.5.4 Liquefaction

Seismic agitation of relatively loose saturated sands, silty sands, and some silts can result in a buildup of pore pressure. If the pore pressure exceeds the overburden stresses, a temporary quick condition known as liquefaction can occur. Liquefaction effects can manifest in several ways including: 1) loss of bearing; 2) lateral spread; 3) dynamic settlement; and 4) flow failure. Lateral spreading has typically been the most damaging mode of failure.

In general, the more recent that a sediment has been deposited, the more likely it will be susceptible to liquefaction. Other factors that must be considered are groundwater, confining stresses, relative density, and the intensity and duration of seismically-induced ground shaking.

Groundwater was not encountered during our subsurface investigation at a depth approximately 51.5 feet below the ground surface. The regional groundwater map indicates that the historic-high groundwater level is 10 feet below the ground surface (CDMG, 1997). The site is located in a liquefaction zone per the seismic hazard maps (CDMG, 1997).

Alta performed a liquefication analysis utilizing data from the hollow-stem auger borings and laboratory test results to analyze the liquefaction

potential of the young Quaternary alluvium. A description of Alta's analysis and calculations are presented in Appendix D of this report. A groundwater level of 10 feet below existing ground surface was assumed. The results of our findings are discussed below under the headings of the specific types of liquefaction which can be manifested during seismic shaking.

- **Loss of Bearing:**

  Liquefaction can potentially cause foundation bearing failure due to ground softening and near-failure in bearing. Based on the removal recommendations presented in this report, Alta anticipates that the potential for loss of bearing will be minimal.

- **Lateral Spreading:**

  The lateral displacement of surficial blocks of sediment can occur as a result of liquefaction in a subsurface layer. The most pervasive forms of lateral spreading typically involve sites located near a "free-face" (large slopes, channels, etc.), however, it has been noted that lateral spreading can occur on sites with gently sloping (1% or more) ground, such as the subject site.

  Determination of the potential for lateral spread is based on the presence of continuous potentially liquefiable soil layers underneath the structures, the presence of lateral confinement, and various analyses such as empirical modeling. Bartlett, Hansen and Youd (2002) states that surface manifestation of lateral spread is typically limited to sites with liquefiable soils within 10 meters (32 feet) of grade, and that sites underlain by soils with $(N1)_{60}$ values 15 and greater do not experience significant displacements from earthquakes with magnitudes less than 8.

  There were no layers within 32 feet of the existing ground surface with $(N1)_{60}$ values less than 15 that are susceptible to liquefaction. As such, it is our opinion that the potential for lateral spread to occur onsite is considered minimal upon the completion of remedial grading.

- **Settlement:**

  Settlement due to seismic shaking can occur as a result of both liquefaction of saturated sediments or rearrangement of dry sand

particles. Our liquefaction analysis was performed utilizing SPT from the hollow-stem auger borings and laboratory test results to analyze the potential amount of settlement. A description of Alta's analysis and calculations are presented in Appendix D of this report. The calculations indicated that the potential amount of dynamic settlement is less than 1-inch. Dynamic settlement design recommendations are presented in Section 7.1.

- **Flow Failure:**

  Due to the relatively flat nature of the site, and the relatively horizontal deposition of the underlying deposits, the potential for flow failure onsite is considered low.

4.5.4 Dry Sand Settlement

Dry sand settlement is the process of settlement of the ground surface during a seismic event in sand layers. Based on the remedial grading recommendations, the density and fines content of the underlying young alluvium, dry sand settlement is not anticipated to be a significant constraint.

5.0 ENGINEERING PROPERTIES AND ANALYSIS

5.1 Materials Properties

Presented herein is a general discussion of the engineering properties of the onsite materials that will be encountered during construction of the proposed project. Descriptions of the soil (Unified Soil Classification System) and in-place moisture/density results are presented on the boring logs in Appendix B.

5.1.1 Excavation Characteristics

Based on the data provided from the subsurface investigation, it is our opinion that the majority of the onsite materials possess favorable excavation characteristics such that conventional earthmoving equipment can be utilized.

5.1.2 Compressibility

The onsite artificial fill and upper portions of the young alluvium are considered compressible and unsuitable to support the proposed improvements. Recommended removal depths are presented in Section 6.1.2.

5.1.3 Moisture

The moisture content of the artificial fill and upper portions of young alluvium that will require removal and recompaction as discussed in Section 6.1.2 is relatively high, as shown on the boring logs in Appendix B. These soils may need to be dried or mixed with drier materials before placing them as engineered fill, as noted in Section 6.2.6.

5.1.4 Hydro-Consolidation

Hydro-consolidation is the effect of introducing water into soil that is prone to collapse. Upon loading and initial wetting, the soil structure and apparent strength are altered resulting in almost immediate settlement. That settlement can have adverse impacts on engineered structures, particularly in areas where it is manifested differentially. Differential settlements are typically associated with differential wetting, irregularities in the subsurface soil conditions, and/or irregular loading patterns.

Based on our laboratory testing (Appendix C), the potential for hydro-collapse onsite is minimal and should be within foundation tolerances upon the completion of the recommended unsuitable soils removals.

5.1.5 Expansion Potential

Expansion index testing was performed on a sample taken during our subsurface investigation. Based on the results, it is anticipated that the

majority of materials onsite are "medium" to "high" in expansion potential (51≤EI≤130, Appendix C) when tested per ASTM D: 4829.

5.1.6 Earthwork Adjustments

The values presented in Table 5-1 are deemed appropriate for estimating purposes and may be used in an effort to balance earthwork quantities. As is the case with every project, contingencies should be made to adjust the earthwork balance when grading is in-progress and actual conditions are better defined.

TABLE 5-1
Earthwork Adjustment Factors

Geologic Unit	Adjustment Factor Range	Average
Artificial Fill/Young Quaternary Alluvium	Shrink 4% to 6%	5%

5.1.7 Chemical Analyses

Chemical testing was performed on a sample of material underlying the proposed site. Soluble sulfate test results indicate that the soluble sulfate concentrations of the soils tested are classified as negligible (Class S0) per ACI 318-14.

Negligible chloride levels were detected in the onsite soils (Appendix C). Resistivity testing conducted as part of this investigation, indicates that the soils are "severely corrosive" to buried metals (per Romanoff, 1989). Additional discussions on corrosion are presented in Section 7.9. Corrosion tests results are presented in Appendix C.

5.2 Engineering Analysis

Presented below is a general discussion of the engineering analysis methods that were utilized to develop the conclusions and recommendations presented in this report.

5.2.1 Bearing Capacity and Lateral Earth Pressures

Ultimate bearing capacity values were obtained using the graphs and formula presented in NAVFAC DM-7.1. Allowable bearing was determined by applying a factor of safety of at least 3 to the ultimate bearing capacity. Static lateral earth pressures were calculated using Rankine methods for active and passive cases. If it is desired to use Coulomb forces, a separate analysis specific to the application can be conducted.

6.0 CONCLUSIONS AND RECOMMENDATIONS

Based on Alta's findings during our subsurface investigation, the laboratory test results, our staff's previous experience in the area, it is Alta's opinion that the development of the site is feasible from a geotechnical perspective. Presented below are recommendations that should be incorporated into site development and construction plans.

6.1 Remedial Grading Recommendations

All grading shall be accomplished under the observation and testing of the project geotechnical consultant in accordance with the recommendations contained herein and the City of Compton criteria.

6.1.1 Site Preparation

Vegetation, construction debris, and other deleterious materials are unsuitable as structural fill material and should be disposed of off-site prior to commencing grading/construction. Any septic tanks, seepage pits or wells should be abandoned as per the County of Los Angeles Department of Health Services.

Existing concrete from the demolition of the hospital should be removed prior to the placement of engineered fill. The demolished concrete may be incorporated into compacted, engineered fills after it is crushed to a

maximum size of six (6) inches. Prior to placement as engineered fill, any protruding steel rebar should be cut from the concrete pieces and disposed of offsite.

6.1.2 Unsuitable Soil Removals

The artificial fill and the upper portions of the young alluvium are compressible and as such, are not suitable to support the proposed structures. Therefore, it is anticipated that, on average, the upper three (3) to six (6) feet of existing soils will require removal and recompaction, extending a minimum of five (5) feet horizontally outside the structures. This recommended removal combined with the foundation recommendations presented in Section 7.1 should provide suitable support for the proposed structures.

For fill areas in streets, in general, a minimum removal and recompaction of the upper two (2) feet of natural soils is recommended (all artificial fill should be removed and recompacted). For cuts greater than two (2) feet in street areas, removals are not required. For cuts less than two (2) feet, the two (2) foot removal and recompaction applies.

The Project Geotechnical Consultant should observe the removal bottom prior to placing fill. If unsuitable soils such as undocumented artificial fill are exposed upon the completion of the removals recommended above, additional removals may be required.

Material removed as part of the unsuitable soil removals can be used as artificial fill, provided it is free of deleterious materials.

6.2 General Earthwork Recommendations

6.2.1 Compaction Standards

All fill and processed natural ground shall be compacted to a minimum relative compaction of 90 percent, as determined by ASTM Test Method: D-1557. Fill material should be moisture conditioned to optimum moisture or above, and as generally discussed in Alta's Earthwork Specification Section presented in Appendix F. Compaction shall be achieved with the use of sheepsfoot rollers or similar kneading type equipment.

6.2.2 Groundwater/Seepage

It is anticipated that groundwater will not be encountered during construction. It is possible that perched water conditions could be encountered depending on the time of year construction occurs.

6.2.3 Documentation of Removals

All removal/over-excavation bottoms should be observed and approved by the project Geotechnical Consultant prior to fill placement. Consideration should be given to surveying the removal bottoms and undercuts after approval by the geotechnical consultant and prior to the placement of fill. Staking should be provided in order to verify undercut locations and depths.

6.2.4 Treatment of Removal Bottoms

At the completion of removals/over-excavation, the exposed removal bottom should be ripped to a minimum depth of eight (8) inches, moisture-conditioned to above optimum moisture content and compacted in-place to the project standards.

6.2.5 Fill Placement

After removals, scarification, and compaction of in-place materials are completed, additional fill may be placed. Fill should be placed in eight-inch bulk maximum lifts, moisture conditioned to optimum moisture content or above, compacted and tested as grading/construction progresses until final grades are attained.

6.2.6 Moisture Content

The moisture content of the upper in-situ soils is above optimum, as shown on the boring logs in Appendix B. The contractor shall take this into account when determining the most appropriate method for fill placement.

6.2.7 Mixing

Mixing of materials may be necessary to prevent layering of different soil types and/or different moisture contents. The mixing should be accomplished prior to and as part of the compaction of each fill lift.

6.2.8 Import Soils

Import soils, if necessary, should consist of clean, structural quality, compactable materials similar to the on-site soils and should be free of trash, debris or other objectionable materials. The project Geotechnical Consultant should be notified not less than 72 hours in advance of the locations of any soils proposed for import. Import sources should be sampled, tested, and approved by the project Geotechnical Consultant at the source prior to the importation of the soils to the site. The project Civil Engineer should include these requirements on plans and specifications for the project.

6.2.9 Utility Trenches

6.2.9.1 Excavation

Utility trenches should be supported, either by laying back excavations or shoring, in accordance with applicable OSHA standards. In general, existing site soils are classified as Soil Types "B" and "C" per OSHA standards. Upon completion of the recommended removals and re-compaction, the artificial fill will be classified as Soil Type "B". It is anticipated that perched water will not be encountered during excavation. The Project Geotechnical Consulting should be consulted if geologic conditions vary from what is presented in this report.

6.2.9.2 Backfill

Trench backfill should be compacted to at least 90 percent of maximum dry density as determined by ASTM D-1557. Onsite soils will not be suitable for use as bedding material but will be suitable for use in backfill provided oversized materials are removed. No surcharge loads should be imposed above excavations. This includes spoil piles, lumber, concrete trucks, or other construction materials and equipment. Drainage above excavations should be directed away from the banks. Care should be taken to avoid saturation of the soils. Compaction should be accomplished by mechanical means. Jetting of native soils will not be acceptable.

Under-slab trenches should also be compacted to project specifications. If select granular backfill (SE > 30) is used, compaction by flooding will be acceptable.

6.2.10 Backcut Stability

Temporary backcuts, if required during unsuitable soil removals, should be made no steeper than 1:1 without review and approval of the geotechnical consultant. Flatter backcuts may be necessary where geologic conditions dictate and where minimum width dimensions are to be maintained.

Care should be taken during remedial grading operations in order to minimize risk of failure. Should failure occur, complete removal of the disturbed material will be required.

In consideration of the inherent instability created by temporary construction backcuts for removals, it is imperative that grading schedules are coordinated to minimize the unsupported exposure time of these excavations. Once started, these excavations and subsequent fill operations should be maintained to completion without intervening delays imposed by avoidable circumstances. In cases where five-day workweeks comprise a normal schedule, grading should be planned to avoid exposing at-grade or near-grade excavations through a non-work weekend. Where improvements may be affected by temporary instability, either on or offsite, further restrictions such as slot cutting, extending work days, implementing weekend schedules, and/or other requirements considered critical to serving specific circumstances may be imposed.

6.3 Storm Water Infiltration Systems

Municipalities have been increasing the requirement for onsite storm water infiltration, rather than allowing water to enter storm drain systems. From a geotechnical perspective, allowing storm water to infiltrate the onsite soil in concentrated areas increases the potential for settlement, liquefaction, and water-related damage to structures/improvements, such as wet slabs or pumping subgrade, and should be avoided where possible. If infiltration systems are required on this site, care should be taken in designing systems that control the storm water as much as possible.

Preliminary infiltration testing was conducted at the site as part of this investigation, and the methodology is discussed in 3.2. The resulting infiltration rate for P-1 was calculated to be 0.13-inches per hour, at approximately 5-feet below the existing ground surface. The results do not include a factor of safety. Given the characteristics of the underlying soil, in our opinion, deeper testing would not result in higher rates.

Groundwater was not encountered during our subsurface investigation at a depth of 51.5 feet below the existing ground surface. The historic-high groundwater is 10 feet below the ground surface (CDMG, 1998).

Given the low infiltration rate, high in-situ moisture content and fine-grained nature of the underlying soil, infiltration WQMP systems are likely not feasible at the subject site. The Project Geotechnical Consultant should review the final WQMP design prior to construction.

6.4 Boundary Conditions

The site is bounded to the north by West Compton Boulevard, to the east by Kemp Avenue, to the south by 151st Street, and to the west by Dwight Avenue. Construction of retaining/screen walls in these areas may require additional

geotechnical recommendations concerning unsuitable soil removals and foundation design parameters as the design progresses.

7.0 DESIGN CONSIDERATIONS

7.1 Structural Design

It is anticipated that multi-story, wood-framed residential structures with slab on-grade and shallow foundations will be constructed. Upon the completion of rough grading, finish grade samples should be collected and tested in order to provide specific recommendations as they relate to individual building pads. These test results and corresponding design recommendations should be presented in a final rough grading report. Final slab and foundation design recommendations should be made based upon specific structure sitings, loading conditions, and as-graded soil conditions.

It is anticipated that the majority of onsite soils will possess "medium" to "high" expansion potential when tested in general accordance with ASTM Test Method D: 4829. Due to the expansion potential, it is anticipated that post-tensioned slabs will be utilized for the project.

7.1.1 Foundation Design

Foundations may be preliminary designed based on the values presented in Table 7-1 below.

Table 7-1
Foundation Design Parameters*

Allowable Bearing	2000 lbs/ft^2 (assuming a minimum embedment depth and width of 12 inches)
Lateral Bearing	250 lbs/ft^2 at a depth of 12 inches plus 250 lbs/ft^2 for each additional 12 inches of embedment to a maximum of 2000 lbs/ft^2.
Sliding Coefficient	0.30
Settlement	Static Settlement - 0.5 inches in 40 feet Dynamic Settlement - 0.5 inches in 40 feet

*These values may be increased as allowed by Code to resist transient loads such as wind or seismic. Building code and structural design considerations may govern depth and reinforcement requirements and should be evaluated.

7.1.2 Post-Tensioned Slabs/Foundation Design Recommendations

Post-tensioned slabs for the project may be designed utilizing the parameters presented in Tables 7-1 and 7-3. The parameters presented herein are based on methodology provided in the Design of Post-Tensioned Slabs-On-Ground, Third Edition, by the Post-Tensioning Institute, in accordance with the 2016 CBC.

TABLE 7-3
POST-TENSION SLAB DESIGN PARAMETERS

Category	Expansion Potential	Minimum Embedment*	Edge Lift		Center Lift	
			Em (ft)	Ym (inch)	Em (ft)	Ym (inch)
II	Medium	18 inches	5.0	1.10	9.0	0.46
III	High	24 inches	4.5	1.58	9.0	0.65
Slab Subgrade Moisture						
Category II	Minimum 120% of optimum moisture to a depth of 12 inches prior to pouring concrete					
Category III	Minimum 130% of optimum moisture to a depth of 18 inches prior to pouring concrete					
Embedment*						
The minimum footing embedments presented herein are based on expansion indexes. The structural engineer should determine minimum embedments based on the number of floors supported by the footings, the structural loading, and the requirements of the latest California Building Code. If mat slabs are utilized, the minimum embedment depths can be reduced to 12-inches for Category II and 18-inches for Category III.						
Moisture Barrier						
A moisture barrier should be provided in accordance with the recommendations presented in Section 7.2						
The parameters presented herein are based on procedures presented in the Design of Post-Tensioned Slabs-On-Ground, Third Edition. No corrections for vertical barriers at the edge of the slab, or for adjacent vegetation have been assumed. The design parameters are based on a Constant Suction Value of 3.9 pF.						

7.2 Moisture Barrier

A moisture and vapor retarding system should be placed below the slabs-on-grade in portions of the structure considered to be moisture sensitive and should be capable of effectively preventing the migration of water and reducing the transmission of water vapor to acceptable levels. Historically, a 10-mil plastic

membrane, such as Visqueen, placed between two to four inches of clean sand, has been used for this purpose. The use of this system or other systems can be considered, at the discretion of the designer, provided the system reduces the vapor transmission rates to acceptable levels.

7.3 Seismic Design

The site has been identified as "D" site class in accordance with section 1613.3.2 of the CBC 2016. Utilizing this information, the computer program ATC Hazards by Location and ASCE 7-10 criterion, the spectral response accelerations that can be utilized for the project are presented on Figure 1. These parameters should be verified by the structural engineer. Additional parameters should be determined by the structural engineer based on the Occupancy Category of the proposed structures.

7.4 Fence and Garden Walls

Block walls, if used, should be embedded a minimum of 2 feet below the lowest adjacent grade. Construction joints (not more than 20 feet apart) should be included in the block wall construction. Side yard walls should be structurally separated from the rear yard wall.

7.5 Footing Excavations

Soils from the footing excavations should not be placed in slab-on-grade areas unless properly compacted and tested. The excavations should be cleaned of all loose/sloughed materials and be neatly trimmed at the time of concrete placement. The Project Geotechnical Consultant should observe the footing excavations prior to the placement of concrete to determine that the excavations are founded in suitably compacted material.

7.6 Retaining Wall Design

Retaining walls should be founded on engineered fill and should be backfilled with granular soils that allow for drainage behind the wall. Based on the fine-grained nature of the soils onsite, it is anticipated suitable free-draining backfill material will need to be imported to the site. Foundations may be designed in accordance with the recommendations presented in Table 7-1, above. Unrestrained walls, free to horizontally move 0.0005H (for dense cohesionless backfill), may be designed to resist lateral pressures imposed by a fluid with a unit weight determined in accordance with the Table 7-3 below. The table also presents design parameters for restrained (at-rest) retaining walls. These parameters may be used to design retaining walls that may be considered as restrained due to the method of construction or location (corner sections of unrestrained retaining walls).

TABLE 7-3
Equivalent Fluid Pressures for 90% Compacted Fill (Select Material)

Backfill	Active Pressure (psf/ft)	At-Rest Pressure (psf/ft)
Level	35	55

Per the requirements of the 2016 CBC, the seismic force acting on the retaining walls with backfill exceeding 6-feet in height may be resolved utilizing the formula $21H^2$ lb/lineal ft (H=height of the wall). This force acts at approximately 0.6H above the base of the wall. The seismic value can be converted as required by the retaining wall engineer. Retaining walls should be designed in general accordance with Section 1807A.2 of the 2016 CBC.

- Restrained retaining walls should be designed for "at-rest" conditions.
- The design loads presented in the above table are to be applied on the retaining wall in a horizontal fashion and as such friction between wall and retained soils should not be allowed in the retaining wall analyses.

- Additional allowances should be made in the retaining wall design to account for the influence of construction loads, temporary loads, and possible nearby structural footing loads.
- Select backfill should be granular, structural quality backfill with a Sand Equivalent of 20 or better and an ASCE Expansion Index of 20 or less. The backfill must encompass the full active wedge area. The upper one foot of backfill should be comprised of native on-site soils (see Plate A).
- The wall design should include waterproofing (where appropriate) and backdrains or weep holes for relieving possible hydrostatic pressures. The backdrain should be comprised of a 4-inch perforated PVC pipe in a 1 ft. by 1 ft., ¾-inch gravel matrix, wrapped with a geofabric. The backdrain should be installed with a minimum gradient of 2 percent and should be outletted to an appropriate location.
- No backfill should be placed against concrete until minimum design strengths are achieved.

It should be noted that the allowable bearing and lateral bearing values presented in Table 7-1 are based on level conditions at the toe. Modified design parameters can be presented for retaining walls with sloping condition at the toe. Other conditions should be evaluated on a case by case basis.

7.7 Exterior Slabs and Walkways

Exterior concrete slabs and walkways should be designed and constructed in consideration of the following recommendations.

7.7.1 Subgrade Compaction

The subgrade below exterior concrete slabs should be compacted to a minimum of 90 percent relative compaction as determined by ASTM Test Method: D 1557.

7.7.2 Subgrade Moisture

The subgrade below concrete slabs should be moisture conditioned to a minimum of 120 percent of optimum moisture (medium expansion) or a

RETAINING WALL BACKFILL DETAIL

FILTER FABRIC: MIRAFI 140 FILTER FABRIC OR APPROVED EQUIVALENT

minimum of 130 percent of optimum moisture (high expansion) prior to concrete placement.

7.7.3 Concrete Slab Thickness

Concrete flatwork and driveways should be designed utilizing four-inch minimum thickness.

7.7.4 Concrete Slab Reinforcement

Utilization of reinforcement for flatwork and driveways is subject to a cost/benefit analysis. Reinforcement will decrease the amount of cracking that may occur in flatwork, however, planning for occasional repairs may be more cost effective. Utilizing closely spaced control joints is likely more cost-effective than utilizing reinforcement. The majority of the soils onsite are classified as medium in expansion potential with possible amounts of high expansive soil. Consideration should be given to reinforcing flatwork with irregular (non-square/rectangular) shapes or flatwork underlain by medium or high expansive soils. Given the expansion potential, consideration should be given to reinforcing concrete flatwork with a minimum of 6x6-W1.4xW1.4 welded wire mesh.

7.7.5 Control Joints

Weakened plane joints should be installed on walkways at intervals of approximately eight feet (maximum) or less. Exterior slabs should be designed to withstand shrinkage of the concrete.

7.8 Concrete Design

As stated in Section 5.1.7, negligible concentrations of sulfates were detected in the onsite soils. Therefore, the use of sulfate resistant concrete is not required per ACI 318-14 at this time. Post-grading conditions should be evaluated, and final recommendations made at that time.

7.9 Corrosion

Based on preliminary testing, the onsite soils are corrosive to buried metal objects. Buried ferrous metals should be protected against the effects of corrosive soils in accordance with the manufacturer's recommendations. Typical measures may include using non-corrosive backfill, protective coatings, wrapping, plastic pipes, or a combination of these methods. A corrosion engineer should be consulted if specific design recommendations are required by the improvement designer.

Per ACI 318-14, an exposure class of C1 would be applicable to metals encased in concrete (rebar in footings) due to being exposed to moisture from surrounding soils. Per Table 19.3.2.1 of ACI 318-14, the requirements for concrete with an exposure class of C1 are a minimum compressive strength of 2500 psi and a maximum water-soluble chloride ion content in concrete of 0.30 (percent by weight of cement).

7.10 Pavement Design

Pavement sections for the proposed streets shall be designed based on laboratory testing conducted on samples taken from the soil subgrade. Preliminarily, based on an assumed R-Value of 10, the pavement may be designed utilizing the sections presented in Table 7-4. These sections should be verified upon the completion of grading, based on R-Value testing. The ultimate pavement section design for public streets is under the City of Compton's purview.

Table 7-4 Preliminary Pavement Sections		
Traffic Index	Pavement Section Options OR	
5.0	3-inch AC on 10-inch AB	4-inch AC on 7-inch AB
5.5	3-inch AC on 11-inch AB	4-inch AC on 8.5-inch AB
6.0	3.5-inch AC on 11.5-inch AB	4-inch AC on 10.5-inch AB
AC-Asphalt Concrete AB-Caltrans Class II Base		

Construction of the streets should be accomplished in accordance with the current criteria of the City of Compton. Prior to the placement of base material, the subgrade should be suitably moisture conditioned, processed and compacted to a minimum 95 percent of the laboratory maximum density (ASTM: D 1557) to at least twelve (12) inches below subgrade. After subgrade compaction, the exposed grade should then be "proof"-rolled with heavy equipment to ensure the grade does not "pump" and is verified as non-yielding. Aggregate base material should be placed on the compacted subgrade and compacted in-place to a minimum 95 percent of the laboratory standard obtained per ASTM: D 1557.

8.0 LOT MAINTENANCE

Ongoing maintenance of the improvements is essential to the long-term performance of structures. The following recommendations should be implemented.

8.1 Lot Drainage

Roof, pad and lot drainage should be collected and directed away from structures and slopes and toward approved disposal areas. Design fine grade elevations should be maintained through the life of the structure or if design fine grade elevations are altered, adequate area drains should be installed in order to provide rapid discharge of water, away from structures and slopes. Owners should be made aware that they are responsible for maintenance and cleaning of

all drainage terraces, down drains, and other devices that have been installed to promote structure and slope stability.

8.2 Burrowing Animals

Residents or owners should undertake a program for the elimination of burrowing animals.

9.0 FUTURE PLAN REVIEWS

This report represents a geotechnical review of the site. As the project design for the project progresses, site specific geologic and geotechnical issues should be considered in the design and construction of the project. Consequently, future plan reviews may be necessary. These reviews may include reviews of:

- Grading Plans
- Foundation Plans
- Utility Plans

These plans should be forwarded to the project Geotechnical Consultant for review.

10.0 CLOSURE

10.1 Geotechnical Review

For the purposes of this report, multiple working hypotheses were established for the project, utilizing the available data and the most probable model is used for the analysis. Future information collected during the proposed grading operations is intended to evaluate the hypothesis and as such, some of the assumptions summarized in this report may need to be changed. Some modifications of the grading recommendations may become necessary, should the conditions encountered in the field differ from the conditions hypothesized in this report.

Plans and sections of the project specifications should be reviewed by Alta to evaluate conformance with the intent of the recommendations contained in this

report. If the project description or final design varies from that described herein, Alta must be consulted regarding the applicability of the recommendations contained herein and whether any changes are required. Alta accepts no liability for any use of its recommendations if the project description or final design varies and Alta is not consulted regarding the alterations.

10.2 Limitations

This report is based on the following: 1) the project as presented on the attached plan; 2) the information obtained from Alta's laboratory testing included herein; and 3) from the information presented in the referenced reports. The findings and recommendations are based on the results of the subsurface investigation, laboratory testing, and office analysis combined with an interpolation and extrapolation of conditions between and beyond the subsurface excavation locations. However, the materials adjacent to or beneath those observed may have different characteristics than those observed, and no precise representations are made as to the quality or extent of the materials not observed. The results reflect an interpretation of the direct evidence obtained. Work performed by Alta has been conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the geotechnical profession currently practicing in the same locality under similar conditions. No other representation, either expressed or implied, and no warranty or guarantee is included or intended.

The recommendations presented in this report are based on the assumption that an appropriate level of field review will be provided by a geotechnical consultant who is familiar with the design and site geologic conditions. That field review shall be sufficient to confirm that geotechnical and geologic conditions exposed during grading are consistent with the geologic representations and corresponding recommendations presented in this report.

The conclusions and recommendations included in this report are applicable to the specific design of this project as discussed in this report. They have no applicability to any other project or to any other location and any and all subsequent users accept any and all liability resulting from any use or reuse of the data, opinions, and recommendations without the prior written consent of Alta.

Alta has no responsibility for construction means, methods, techniques, sequences, procedures, safety precautions, programs in connection with the construction, acts or omissions of the CONTRACTOR or any other person performing any of the construction, or for the failure of any of them to carry out the construction in accordance with the final design drawings and specifications.

APPENDIX B

Subsurface Investigation

APPENDIX B

Subsurface Investigation

Alta's subsurface investigation consisted of excavating, logging, and sampling five (5) hollow-stem auger borings. Details of the subsurface investigation are presented in Table B. The approximate locations of the exploratory excavations are shown on Plate 1 and the Geotechnical Logs are attached.

TABLE B
SURFACE INVESTIGATION DETAILS

Equipment	Range of Depths	Sampling Methods	Sample Locations
Hollow-stem auger	Up to 51.5 feet	1. Ring Samples 2. Bulk Samples	1. Ring-Select Depths 2. Bulk-Select Depths

UNIFIED SOIL CLASSIFICATION SYSTEM

Major Divisions		grf	ltr	Description
Coarse Grained Soils More than 50% retained on No. 200 sieve	Gravel and Gravelly Soils More than 50% of coarse fraction retained on No,. 4 sieve		GW	Well-graded gravels or gravel sand mixtures, little or no fines
			GP	Poorly-graded gravels or gravel sand mixture, little or no fines
			GM	Silty gravels, gravel-sand-silt mixtures
			GC	Clayey gravels, gravel-sand-clay mixtures
	Sand and Sandy Soils More than 50% of coarse fraction passes on No,. 4 sieve		SW	Well-graded sands or gravelly sands, little or no fines
			SP	Poorly-graded sands or gravelly sands, little or no fines
			SM	Silty sands, sand-silt mixtures
			SC	Clayey sands, and-clay mixtures

Major Divisions		grf	ltr	
Fine Grained Soils More than 50% passes on No. 200 sieve	Silts And Clays LL,<50		ML	Inorganic silts and very fine sands, rock flour, silty or clayey fine sands or clayey silts with slight plasticity
			CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays
			OL	Organic silts and organic silt-clays of low plasticity
	Silts And Clays LL,<50		MH	Inorganic silts, micaceous or diatomaceous fine or silty soils, elastic silts
			VH	Inorganic clays of high plasticity, fat clays
			OH	Organic clays of medium to high plasticity
Highly Organic Soils			PT	Peat and other highly organic soils

BOUNDARY CLASSIFICATION: Soils possessing characteristics of two groups are designated by combinations of group symbols.

PARTICLE SIZE LIMITS

U.S. STANDARD SERIES SIEVE: 200 | 40 | 10 | 4

CLEAR SQUARE SIEVE OPENINGS: 3/4" | 3" | 12"

APPENDIX C

Laboratory Testing

LABORATORY TESTING

The following laboratory tests were performed on a representative sample in accordance with the applicable latest standards or methods from the ASTM, California Building Code (CBC) and California Department of Transportation.

Classification

Soils were classified with respect to the Unified Soil Classification System (USCS) in accordance with ASTM D-2487 and D-2488.

Particle Size Analysis

Modified hydrometer testing was conducted to aid in classification of the soil. The results of the particle size analysis are presented in Table C.

Maximum Density/Optimum Moisture

The maximum dry density and optimum moisture content of one representative bulk sample was evaluated in accordance with ASTM D-1557. The results are summarized in Table C.

Expansion Index Tests

One (1) expansion index test was performed to evaluate the expansion potential of typical on-site soil. Testing was carried out in general conformance with ASTM Test Method D-4829. The results are presented in Table C.

Consolidation Tests

Consolidation testing was performed on two (2) relatively "undisturbed" soil samples at their natural moisture content in accordance with procedures outlined in ASTM D-2435. The samples were placed in a consolidometer and loads were applied incrementally in geometric progression. The samples (2.42-inches in diameter and 1-inch in height) were permitted to consolidate under each load increment until the slope of the characteristic linear secondary compression portion of the thickness versus log of time plot was apparent. The percent consolidation for each load cycle was recorded as the ratio of the amount of vertical

compression to the original 1-inch height. The consolidation test results are shown on Plates C-1 and C-2.

Atterberg Limits

Atterberg limit testing of two samples was performed by Alta. The results of these tests are presented on Table C.

Chemical Analyses

Chemical testing of selected samples was performed by Alta. The results of these tests are presented in Table C.

Liquefaction Analysis

APPENDIX D

LIQUEFACTION ANALYSIS

A liquefaction analysis was performed for the site based on SPT data gained from the hollow stem auger drilling. The Ishihara/Yoshimine method to analyze dynamic settlement for the SPT data. The calculations used the following constants: 0.65g for site acceleration, 7.1 for the magnitude of the earthquake, and a groundwater depth of 10 feet below existing grade. A factor of safety of 1.3 was utilized. The results are presented on Plate D-1 through D-5.

APPENDIX E

Maintenance Considerations

MAINTENANCE AND IMPROVEMENT CONSIDERATIONS

General

Owners purchasing property must assume a certain degree of responsibility for improvements and for maintaining conditions around their home. Of primary importance from a geotechnical standpoint are maintaining drainage patterns and minimizing the soil moisture variation below all improvements. Such design, construction and owner maintenance provisions may include:

- Employing contractors for improvements who design and build in recognition of local building codes and specific site soils conditions.
- Establishing and maintaining positive drainage away from all foundations, walkways, driveways, patios, and other improvements.
- Avoiding the construction of planters adjacent to structural improvements. Alternatively, planter sides/bottoms can be sealed with an impermeable membrane and drained away from the improvements via subdrains into approved disposal areas.
- Sealing and maintaining construction/control joints within concrete slabs and walkways to reduce the potential for moisture infiltration into the subgrade soils.
- Utilizing landscaping schemes with vegetation that requires minimal watering. Watering should be done in a uniform manner, as equally as possible on all sides of the foundation, keeping the soil "moist" but not allowing the soil to become saturated.
- Maintaining positive drainage away from structures and providing roof gutters on all structures with downspouts that are designed to carry roof runoff directly into area drains or discharged well away from the foundation areas.
- Avoiding the placement of trees closer to the proposed structures than a distance of one-half the mature height of the tree.
- Observation of the soil conditions around the perimeter of the structure during extremely hot/dry or unusually wet weather conditions so that modifications can be made in irrigation programs to maintain relatively uniform moisture conditions.

Sulfates

Owners should be cautioned against the import and use of certain inorganic fertilizers, soil amendments, and/or other soils from offsite sources in the absence of specific information relating to their chemical composition. Some fertilizers have been known to leach sulfate compounds into soils and increase the sulfate concentrations to potentially detrimental levels.

Site Drainage

- The owners should be made aware of the potential problems that may develop when drainage is altered through construction of hardscape improvements. Ponded water, drainage over the slope face, leaking irrigation systems, overwatering, or other conditions which could lead to ground saturation must be avoided.
- No water should be allowed to flow over the slopes. No alteration of pad gradients should be allowed that would prevent pad and roof runoff from being directed to approved disposal areas.
- Drainage patterns have been established at the time of the fine grading should be maintained throughout the life of the structure. No alterations to these drainage patterns should be made unless designed by qualified professionals in compliance with local code requirements and site-specific soils conditions.

Slope Drainage

- Residents should be made aware of the importance of maintaining and cleaning all interceptor ditches, drainage terraces, down drains, and any other drainage devices, which have been installed to promote slope stability.
- Subsurface drainage pipe outlets may protrude through slope surfaces and/or wall faces. These pipes, in conjunction with the graded features, are essential to slope and wall stability and must be protected in-place. They should not be altered or damaged in any way.

Planting and Irrigation of Slopes

- Seeding and planting of the slopes should be planned to achieve, as rapidly as possible, a well-established and deep-rooted vegetal cover requiring minimal watering.
- It is the responsibility of the landscape architect to provide such plants initially and of the residents to maintain such planting. Alteration of such a planting scheme is at the resident's risk.
- The resident is responsible for proper irrigation and for maintenance and repair of properly installed irrigation systems. Leaks should be fixed immediately.
- Sprinklers should be adjusted to provide maximum uniform coverage with a minimum of water usage and overlap. Overwatering with consequent wasteful runoff and serious ground saturation must be avoided.
- If automatic sprinkler systems are installed, their use must be adjusted to account for seasonal and natural rainfall conditions.

Burrowing Animals

- Residents must undertake a program to eliminate burrowing animals. This must be an ongoing program in order to promote slope stability.

Owner Improvement

Owner improvements (pools, spas, patio slabs, retaining walls, planters, etc.) should be designed to account for the terrain of the project, as well as expansive soil conditions and chemical characteristics. Design considerations on any given lot may need to include provisions for differential bearing materials, ascending/descending slope conditions, bedrock structure, perched (irrigation) water, special geologic surcharge loading conditions, expansive soil stresses, and long-term creep/settlement.

All owner improvements should be designed and constructed by qualified professionals utilizing appropriate design methodologies, which account for the on-site soils and geologic conditions. Each lot and proposed improvement should be evaluated on an individual basis.

Setback Zones

Manufactured slopes maybe subject to long-term settlement and creep that can manifest itself in the form of both horizontal and vertical movement. These movements typically are produced as a result of weathering, erosion, gravity forces, and other natural phenomenon. A setback adjacent to slopes is required by most building codes, including the California Building Code. This zone is intended to locate and support the residential structures away from these slopes and onto soils that are not subject to the potential adverse effects of these natural phenomena.

The owner may wish to construct patios, walls, walkways, planters, swimming pools, spas, etc. within this zone. Such facilities may be sensitive to settlement and creep and should not be constructed within the setback zone unless properly engineered. It is suggested that plans for such improvements be designed by a professional engineer who is familiar with grading ordinances and design and construction requirements. In addition, we recommend that the designer and contractor familiarize themselves with the site specific geologic and geotechnical conditions on the specific lot.

APPENDIX F

Earthwork Specifications

ALTA CALIFORNIA GEOTECHNICAL, INC.
EARTHWORK SPECIFICATIONS

These specifications present the generally accepted standards and minimum earthwork requirements for the development of the project. These specifications shall be the project guidelines for earthwork except where specifically superseded in preliminary geology and soils reports, grading plan review reports or by the prevailing grading codes or ordinances of the controlling agency.

A. GENERAL

1. The Contractor shall be responsible for the satisfactory completion of all earthwork in accordance with the project plans and specifications.

2. The project Geotechnical Engineer and Engineering Geologist, or their representatives, shall provide observation and testing services, and Geotechnical consultation for the duration of the project.

3. All clearing, grubbing, stripping and site preparation for the project shall be accomplished by the Contractor to the satisfaction of the Geotechnical Engineer/Engineering Geologist.

4. It is the Contractor's responsibility to prepare the ground surface to receive fill to the satisfaction of the Geotechnical Engineer and to place, spread, mix, moisture condition, and compact the fill in accordance with the job specifications and as required by the Geotechnical Engineer. The Contractor shall also remove all material considered by the Geotechnical Engineer to be unsuitable for use in the construction of engineered fills.

5. The Contractor shall have suitable and sufficient equipment in operation to handle the amount of fill being placed. When necessary, equipment will be shut down temporarily in order to permit the proper preparation of fills.

B. PREPARATION OF FILL AREAS

1. Excessive vegetation and all deleterious material should be disposed of offsite as required by the Geotechnical Engineer.

   Existing fill, soil, alluvium or rock materials determined by the Geotechnical Engineer as being unsuitable for placement in compacted fills shall be removed and hauled from the site. Where applicable, the Contractor may obtain the

approval of the Soils Engineer and the controlling authorities for the project to dispose of the above described materials, or a portion thereof, in designated areas onsite.

After removal of the deleterious materials have been accomplished, earth materials deemed unsuitable in their natural, in-place condition, shall be removed as recommended by the Geotechnical Engineer/Engineering Geologist.

2. Upon achieving a suitable bottom for fill placement, the exposed removal bottom shall be disced or bladed by the Contractor to the satisfaction of the Geotechnical Engineer. The prepared ground surfaces shall then be brought to the specified moisture content mixed as required, and compacted and tested as specified. In localities where it is necessary to obtain the approval of the controlling agency prior to placing fill, it will be the Contractor's responsibility to contact the proper authorities to visit the site.

3. Any underground structure such as cesspools, cisterns, mining shafts, tunnels, septic tanks, wells, pipelines or other structures not located prior to grading are to be removed or treated in a manner prescribed by the Geotechnical Engineer and/or the controlling agency for the project.

C. **ENGINEERED FILLS**

1. Any material imported or excavated on the property may be utilized as fill, provided the material has been determined to be suitable by the Geotechnical Engineer. Deleterious materials shall be removed from the fill as directed by the Geotechnical Engineer.

2. Rock or rock fragments less than twelve inches in the largest dimension may be utilized in the fill, provided they are not placed in concentrated pockets and the distribution of the rocks is approved by the Geotechnical Engineer.

3. Rocks greater than twelve inches in the largest dimension shall be taken offsite, or placed in accordance with the recommendations of the Geotechnical Engineer in areas designated as suitable for rock disposal.

4. All materials to be used as fill, shall be tested in the laboratory by the Geotechnical Engineer. Proposed import materials shall be approved by the Geotechnical Engineer 48 hours prior to importation.

5. The fill materials shall be placed by the Contractor in lifts, that when compacted, shall not exceed six inches. Each lift shall be spread evenly and shall be

thoroughly mixed to achieve a near uniform moisture condition and a uniform blend of materials.

All compaction shall be achieved at or above the optimum moisture content, as determined by the applicable laboratory standard. The Contractor will be notified if the fill materials are too wet or too dry to achieve the required compaction standard.

6. When the moisture content of the fill material is below the limit specified by the Geotechnical Engineer, water shall be added and the materials shall be blended until a uniform moisture content, within specified limits, is achieved. When the moisture content of the fill material is above the limits specified by the Geotechnical Engineer, the fill materials shall be aerated by discing, blading, mixed with dryer fill materials, or other satisfactory methods until the moisture content is within the specified limits.

7. Each fill lift shall be compacted to the minimum project standards, in compliance with the testing methods specified by the controlling governmental agency, and in accordance with recommendations of the Geotechnical Engineer.

   In the absence of specific recommendations by the Geotechnical Engineer to the contrary, the compaction standard shall be the most recent version of ASTM:D 1557.

8. Where a slope receiving fill exceeds a ratio of five-horizontal to one-vertical, the fill shall be keyed and benched through all unsuitable materials into sound bedrock or firm material, in accordance with the recommendations and approval of the Geotechnical Engineer.

9. Side hill fills shall have a minimum key width of 15 feet into bedrock or firm materials, unless otherwise specified in the soil report and approved by the Geotechnical Engineer in the field.

10. Drainage terraces and subdrainage devices shall be constructed in compliance with the ordinances of the controlling governmental agency and/or with the recommendations of the Geotechnical Engineer and Engineering Geologist.

11. The Contractor shall be required to maintain the specified minimum relative compaction out to the finish slope face of fill slopes, buttresses, and stabilization fills as directed by the Geotechnical Engineer and/or the governing agency for the project. This may be achieved by either overbuilding the slope and cutting

back to the compacted core; by direct compaction of the slope face with suitable equipment; or by any other procedure which produces the required result.

12. The fill portion of fill-over-cut slopes shall be properly keyed into rock or firm material; and the fill area shall be stripped of all soil or unsuitable materials prior to placing fill.

    The design cut portion of the slope should be made first and evaluated for suitability by the Engineering Geologist prior to placement of fill in the keyway above the cut slope.

13. Pad areas in cut or natural ground shall be approved by the Geotechnical Engineer. Finished surfaces of these pads may require scarification and recompaction, or over excavation as determined by the Geotechnical Engineer.

D. CUT SLOPES

1. The Engineering Geologist shall observe all cut slopes and shall be notified by the Contractor when cut slopes are to be started.

2. If, during the course of grading, unforeseen adverse or potentially adverse geologic conditions are encountered, the Engineering Geologist and Soil Engineer shall investigate, analyze and make recommendations to remediate these problems.

3. Non-erodible interceptor swales shall be placed at the top of cut slopes that face the same direction as the superjacent, prevailing drainage.

4. Unless otherwise specified in specific geotechnical reports, no cut slopes shall be excavated higher or steeper than that allowed by the ordinances of controlling governmental agencies.

5. Drainage terraces shall be constructed in compliance with the ordinances of the controlling governmental agencies, and/or in accordance with the recommendations of the Geotechnical Engineer or Engineering Geologist.

E. GRADING CONTROL

1. Fill placement shall be observed and tested by the Geotechnical Engineer and/or his representative during grading.

   Field density tests shall be made by the Geotechnical Engineer and/or his representative to evaluate the compaction and moisture compliance of each fill lift. Density tests shall be conducted at intervals not to exceed two feet of fill

height. Where sheepsfoot rollers are used, the fill may be disturbed to a depth of several inches. Density determinations shall be taken in the compacted material below the disturbed surface at a depth determined by the Geotechnical Engineer or his representative.

2. Where tests indicate that the density of any layer of fill, or portion thereof, is below the required relative compaction, or improper moisture content is in evidence, that particular layer or portion thereof shall be reworked until the required density and/or moisture content has been attained. Additional fills shall not be placed over an area until the previous lift of fill has been tested and found to meet the density and moisture requirements for the project and the previous lift is approved by the Geotechnical Engineer.

3. When grading activities are interrupted by heavy rains, fill operations shall not be resumed until field observations and tests by the Geotechnical Engineer indicate the moisture content and density of the fill are within the specified limits.

4. During construction, the Contractor shall properly grade all surfaces to maintain good drainage and prevent the ponding of water. The Contractor shall take remedial action to control surface water and to prevent erosion of graded areas until such time as a permanent drainage and erosion devices have been installed.

5. Observation and testing by the Geotechnical Engineer and/or his representative shall be conducted during filling and compacting operations in order that he will be able to state in his opinion that all cut and filled areas are graded in accordance with the approved specifications.

6. Upon the completion of grading activities and after the Geotechnical Engineer and Engineering Geologist have finished their observations of the work, final reports shall be submitted. No further excavation or fill placement shall be undertaken without prior notification of the Geotechnical Engineer and/or Engineering Geologist.

F. **FINISHED SLOPES**

All finished cut and fill slopes shall be planted and irrigated and/or protected from erosion in accordance with the project specifications, governing agencies, and/or as recommended by a landscape architect.

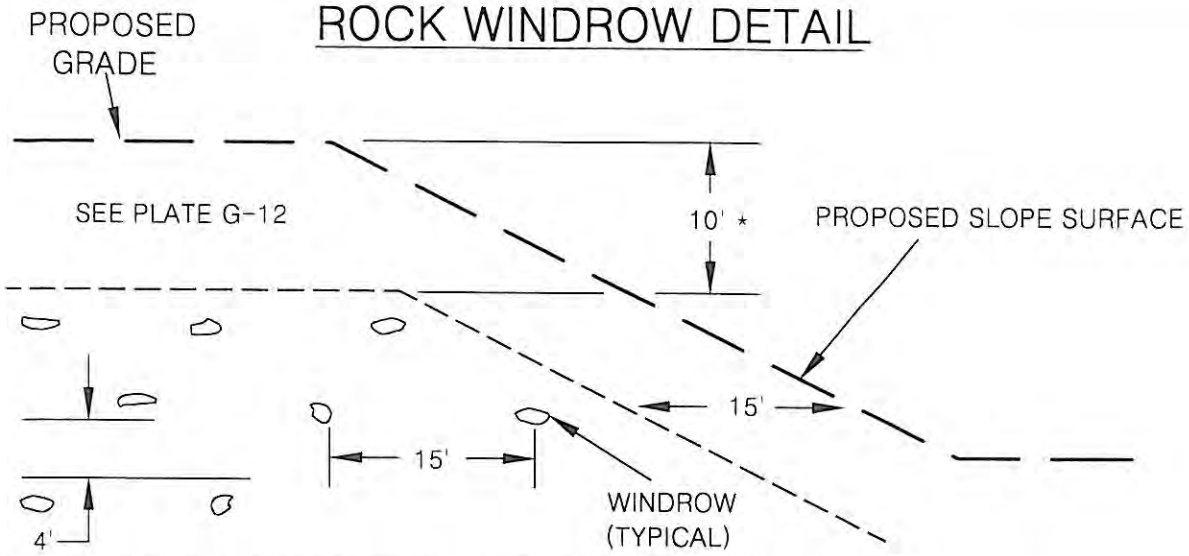
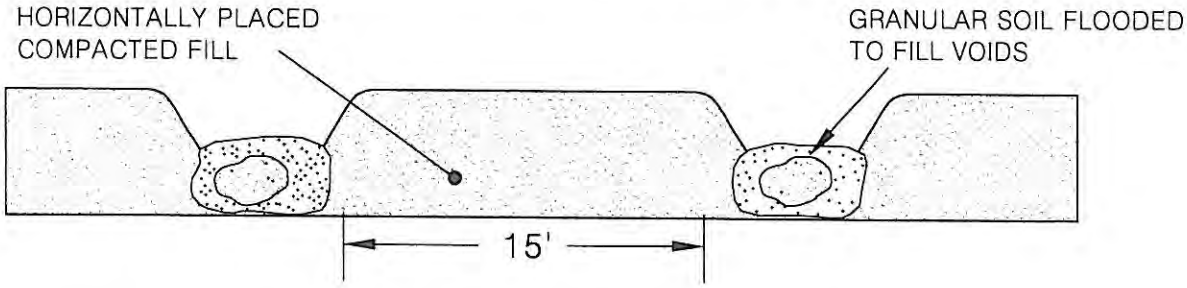
EXCAVATE TEST/OBSERVATION PITS TO CONFIRM EXISTENCE OF MIXTURE OF VARIOUS PARTICLE SIZES, WITHOUT SIGNIFICANT VOIDS, AND FORMING A DENSE, COMPACTED FILL MATRIX. TEST BY ASTM D1556, D2922 AND/OR D3017 WHEN APPROPRIATE. RECORD LIMITS AND ELEVATION OF BLANKET. ALL FILL AND COMPACTION OPERATIONS TO BE CONDUCTED UNDER THE OBSERVATION OF THE GEOTECHNICAL ENGINEER. SUBSEQUENT LIFTS TO BE APPLIED ONLY AFTER OBSERVATION AND CONFIRMATION OF SUITABILITY OF FILL AND RELEASE BY THE GEOTECHNICAL ENGINEER. BLANKETS TO BE CONSTRUCTED IN ACCORDANCE WITH PLATE G-12.

ROCK WINDROW DETAIL



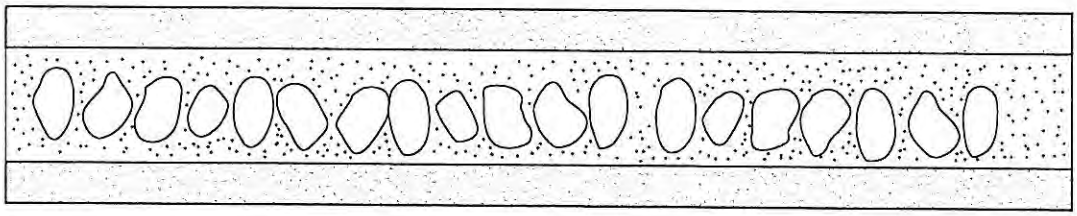
NOTE: OVERSIZED MATERIAL SHOULD BE REMOVED FROM THE 15' CLEAR ZONES WITH SPECIAL EQUIPMENT, SUCH AS A ROCK RAKE, PRIOR TO PLACING THE NEXT FILL LIFT.
*VARIANCES TO THE ABOVE ROCK HOLD DOWN MAY BE GRANTED SUBJECT TO APPROVAL BY THE OWNER, GEOTECHNICAL ENGINEER, AND GOVERNING AGENCY

TYPICAL WINDROW DETAIL (END VIEW)

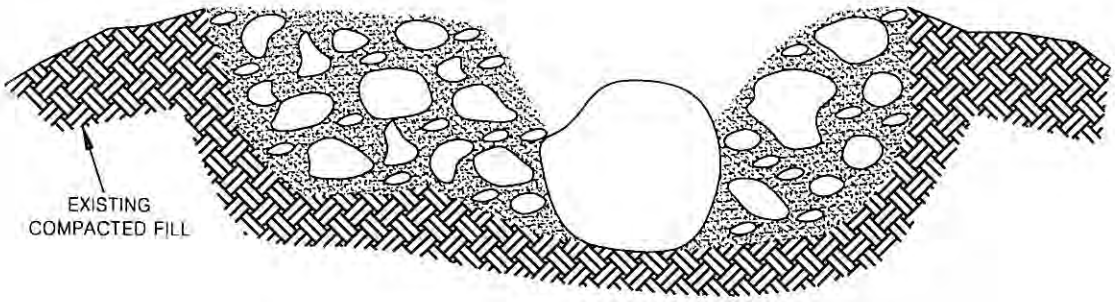


NOTE: COMPACTED FILL SHALL BE BROUGHT UP TO A HIGHER ELEVATION ALONG EACH WINDROW SO GRANULAR SOIL CAN BE FLOODED IN A "TRENCH CONDITION".

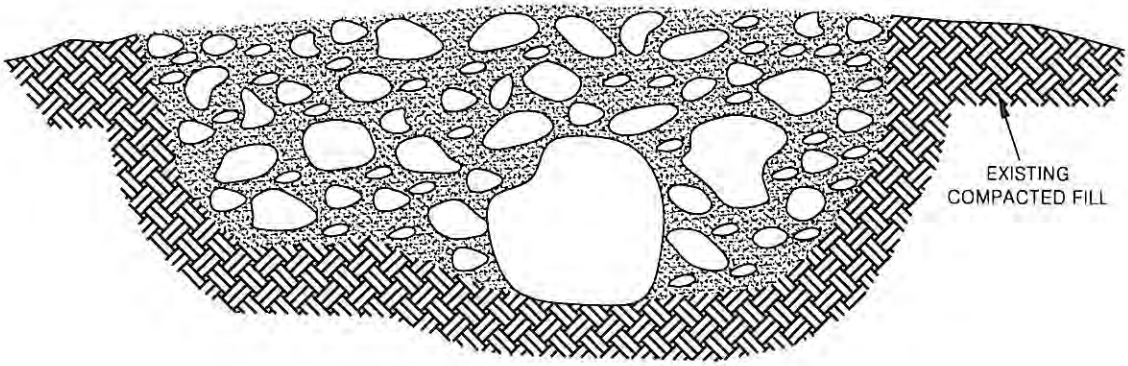
PROFILE VIEW



ISOLATED ROCK BURIAL DETAILS

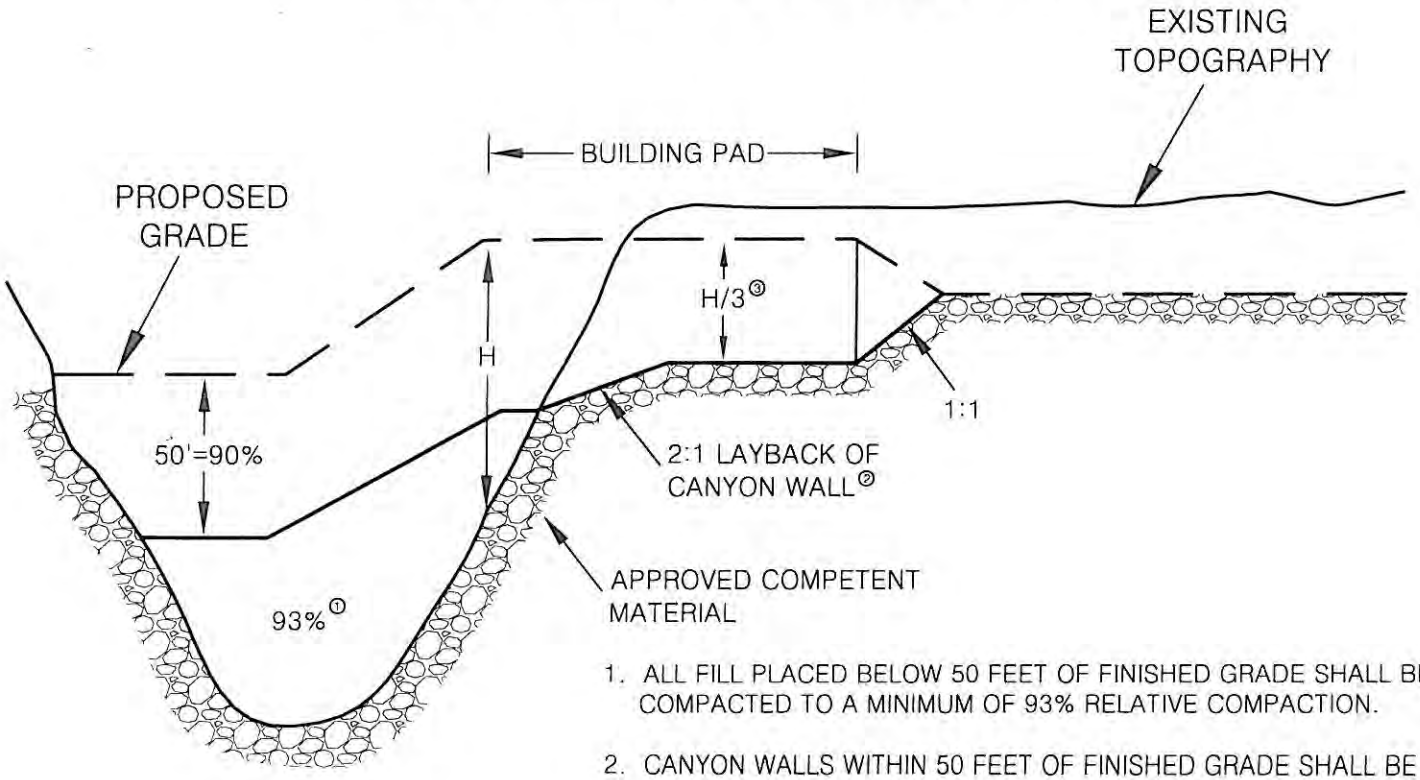


EXCAVATE HOLE INTO EXISTING FILL PRISM, PLACE BOULDER (< 8 feet in maximum dimension) INTO EXISTING COMPACTED FILL. SURROUND WITH SAND, GRAVEL, COBBLES AND WATER HEAVILY. TRACK WITH D8 OR LARGER EQUIPMENT UNTIL RESULTING FILL FULLY SUPPORTS EQUIPMENT. OBSERVE AND/OR TEST IN ACCORDANCE WITH ASTM D1556, D2922 OR D3017. ROCKS LARGER THAN 8 FEET SHALL BE FURTHER REDUCED IN SIZE BY SECONDARY BREAKING.



RELATIVE COMPACTION VS. DEPTH

CANYON WALL LAY BACK
DIFFERENTIAL FILL OVEREXCAVATION DETAILS



1. ALL FILL PLACED BELOW 50 FEET OF FINISHED GRADE SHALL BE COMPACTED TO A MINIMUM OF 93% RELATIVE COMPACTION.

2. CANYON WALLS WITHIN 50 FEET OF FINISHED GRADE SHALL BE LAID BACK TO A SLOPE RATIO OF 2:1 OR FLATTER.

3. ALL BUILDING PADS SHALL BE OVER EXCAVATED TO A MINIMUM OF 1/3 OF THE MAXIMUM DEPTH OF FILL BELOW THE BUILDING PAD TO A MAXIMUM OF 17 FEET.

4. IF THE 2:1 LAY BACK OF THE CANYON WALL IS IMPRACTICAL, THEN AS AN ALTERNATIVE THE INCREASED COMPACTION STANDARDS IN NOTE 1 SHOULD BE EXTENDED UP TO H/3 AND THE LAY BACK WILL NOT BE REQUIRED.

Typical Lot Setbacks

Project Summary

Total Site Area: ± 2.45 Acres

Total Units: 24 Homes
- (8) Plan 1: ± 1,700 SF, 3 bedroom
- (16) Plan 2: ± 1,900 SF, 3 bedroom, opt. bed 4

Density: 9.8 Homes per Acre

Parking:

Required: 54 Spaces (2.25 spaces per home)
- (24) Homes x 2.0 Spaces = 48 Spaces
- (24) Guest x 0.25 Spaces = 6 Spaces

Provided: 102 Spaces (4.25 spaces per home)
- Garage: 48 Spaces (18' x 20' clear)
- Driveway: 48 Spaces (2 space/drive)
- Parallel: 6 Spaces (9' x 22')

Open Space:

Provided: 14,050 S.F. Total (585 S.F. per home)
- Common: 5,390 S.F. (10' Min. Dimension)
- Private: 8,660 S.F. (10' Min. Dimension)

Zoning Summary

Existing General Plan:	Medium Density Residential
Proposed General Plan:	Medium Density Residential
Existing Zoning:	CL - Limited Commercial & P - Parking
Proposed Zoning:	R-M-D - Medium Density Residential - Planned Development
Max. Density:	17.14 Homes per Acre (2,500 sf/home)
Proposed Setbacks:	Compton Blvd: 15' to building 9' to covered porch
	Dwight Ave: 15' to building 12' to covered porch
	Kemp Ave: 15' to building 12' to covered porch
	151st St: 14' to single story element (building 1 & 17) 15' to front of building 9' to covered porch
Building Separation:	10'
Max. Building Height:	35'

INTRODUCTION

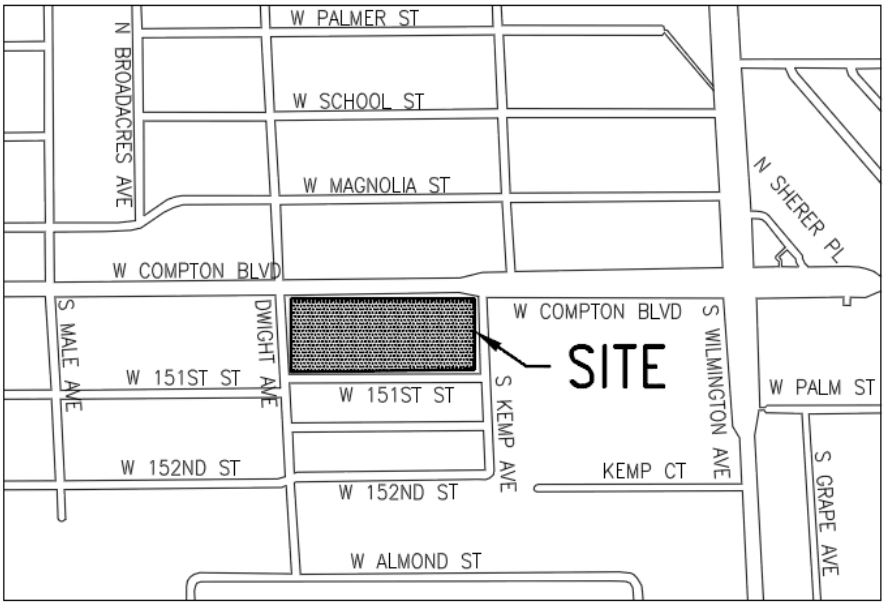
The following Area Study has been prepared by C&V Consulting, Inc. to determine and show:

- ***A.*** The capacity of the existing sewer segments from proposed development site to the Los Angeles County Sanitation District (LACSD) maintained trunk sewers.
- ***B.*** The existing sewer facility will adequately service the proposed development.

This analysis will include any and all tributary flow to the sewer system from the proposed development to the LACSD trunk line downstream of the proposed development. All tributary area within this area study has been developed.

SITE DESCRIPTION

The project is located at 930 West Compton Boulevard, in the City of Compton, California. The site is bounded by West Compton Boulevard to the north, West 151st Street and existing single-family residential to the south, South Kemp Avenue and existing single-family residential to the east, and Dwight Avenue and a liquor store to the west. The project site is currently vacant with no visible traces of impervious coverage. Thus, pervious coverage is assumed to be 100% for the existing condition of the site.



VICINITY MAP
N.T.S.

PROJECT DESCRIPTION

The project proposes the construction of eight condominium buildings of sixty (60) attached units with private garages, private drive aisles, hardscape, associated landscaping, and guest parking areas. The private drive aisle provides access to the residences via two driveway entrances/exits along West 151st Street. Drive aisles and parking areas will be composed of asphalt concrete pavement, and landscaping will be incorporated in open space areas. The proposed project is located within the jurisdictional boundaries of Los Angeles County Sanitation District No. 1. The proposed sewer system will be gravity fed and flow will be towards a local sewer line located along West Compton Boulevard, which conveys and connects to the Districts' Joint Outfall G Unit 5 Trunk Sewer.

AP Number	Size (ac)
6161-001-902	2.75

METHODOLOGY

This study will investigate the sewerage discharge route along West Compton Boulevard from the proposed development (TTM No. 82807) to the Districts' Joint Outfall G Unit 5 Trunk Sewer. The route is on a local sewer line, which is not maintained by the Sanitation Districts of Los Angeles County, connects to the Districts' Joint Outfall G Unit 5 Trunk Sewer for conveyance, located along the west side of Compton Creek at Compton Boulevard. The Districts' 31.3-inch diameter lined trunk sewer has a capacity of 7.9 million gallons per day (mgd) and conveyed a peak flow of 5.8 mgd when last measured in 2013. The subject route of the sewer main will be analyzed by segments based on sewer pipe size, slope, and tributary area.

Reach #1A segment is along West Compton Boulevard to Kemp Avenue, from the connection of the project site Manhole 2 to Manhole 3 and consisting of an existing 12" VCP sewer main with a slope of 0.72%. This segment includes the project site (Area #1A) and the upstream tributary areas of Reach #1.

Reach #2A segment is along West Compton Boulevard from Kemp Avenue to North Wilmington Avenue, Manhole 3 to Manhole 4 and consists of an existing 12" VCP sewer main with a slope of 0.92%. This segment includes Area #2 and the upstream tributary areas of Reach #1A.

Reach #2B segment is along West Compton Boulevard from Kemp Avenue to North Wilmington Avenue, Manhole 4 to Manhole 5 and consists of an existing 12" VCP sewer main with a slope of 0.92%. This segment includes tributary areas of Reach #2A.

Reach #3A segment is on the cross-section of West Compton Boulevard and North Wilmington Avenue, Manhole 5 to Manhole 6 and consists of an existing 12" VCP sewer main with a slope of 0.92%. This segment includes Area #3 and the upstream tributary areas of Reach #2B.

Reach #4A segment is along West Compton Boulevard from Manhole 6 to Manhole 7 and consists of an existing 15" VCP sewer main with a slope of 0.33%. This segment has a lateral connection to a sewer system to the North which also connects to CSD Manhole (G61). This lateral connection is plugged and abandoned as shown on Reference Sheet C-7. This indicates that the flow in the north sewer line conveys into the project sewer line in this study; therefore, the segment includes the upstream Area #4 and the upstream tributary areas of Reach #3A.

Reach #4B segment is along West Compton Boulevard from Manhole 7 to Manhole 8 and consists of an existing 15" VCP sewer main with a slope of 0.33%. This segment includes the upstream tributary areas of Reach #4A.

Reach #5 segment is along West Compton Boulevard to Coral Street and connects to the 31.3" Sewer Trunk Line belonging to Sanitation District No. 1 from Manhole 8 to CSD Manhole (G61) consisting of a 15" VCP sewer main with a slope of 0.33%. This Reach#5 segment includes Area #5 and the tributary area of Reach 4B.

SEWER PIPE CAPACITY ANALYSIS

The existing sewer pipes were analyzed per County Standard S-C4 for a maximum design depth at half full for pipes less than 15" and three fourths full for pipes 15" and greater. Data were obtained from corresponding Sewer As-Built plans and Compton sewer atlas map in Appendix C for the analysis.

In order to calculate the pipe capacity, Kutter's formula was utilized assuming a depth of three-fourths full and a Manning's friction factor, n, of 0.013. Kutter's formula is shown below:

$$Q = Ac\sqrt{RS}$$

Where A = Flow area (sf)
R = Hydraulic Radius (ft)
S = Pipe slope (ft/ft)

$$c = \frac{41.685+\frac{0.00281}{S}+\frac{1.811}{n}}{1+\frac{\left(41.65+\frac{0.00281}{S}\right)n}{\sqrt{R}}}$$

Detailed results for each segment have been tabulated in Appendix B. Details of calculations for each reach of pipe has been included in Appendix B following the table.

The tributary sewer flow rate (Q) for the studied sewer lines are analyzed based on County standards as follows:

For Tributary Areas:
Q = Z*A
A = Tributary Area (Acre)
Z = Zoning Coefficients (Refer to the LACDPW guideline information within Appendix E)

For the Project Site
Q = (0.001 cfs/unit) x (60 units) = 0.060 cfs
(0.001 cfs/unit for proposed condominiums per County standard zoning coefficient within Appendix E)

The tributary areas were calculated by reference scaling the County of Los Angeles Sewer Maintenance Division's Atlas Index Maps and referencing County of Los Angeles Assessor's map. The zoning coefficients were referencing the LACDPW guidelines and the Zoning Map provided by the City of Compton in Appendix G. City of Compton's classification of Low-Density Residential matches the density description

of Los Angeles County Zone R-2, so the zoning coefficient of R-2 is used for Compton's zoning area of Low-Density Residential. Medium-Density Residential applies County R-3 coefficient value and High-Density Residential applies County R-4 coefficient value. These values match the capacity/density represent a more conservative scenario.

Per County requirements, we separately calculated the sewer discharge for schools based on the "Estimated Average Daily Sewage Flows for Various Occupancies" with a peaking factor of 2.5. Churches were taken into consideration of separate calculation, but the discharge calculated was insignificant compared to the zoning coefficient; therefore, the calculation for churches was analyzed by tributary area and corresponding zone. Unit counts were used to determine the flows on condominium sites where its unit density is greater than the tributary area and corresponding zone. The County Sewer Area Study guidelines indicate a zoning coefficient for R-1 Residential as 0.004 cfs/acre which allow up to 4 dwelling units per acre and matches the actual worse case density; For condominium, County recommends applying coefficient of 0.001 cfs/unit.

CONCLUSION

The existing sewer system being analyzed in this area study has a design capacity above the calculated cumulative flow. The peak discharge at the downstream end of the sewer system 15" pipe entering the County Sanitation District No. 1 existing 31.3" sewer trunk main is calculated to be a rate of 1.8465 cfs with a flow depth of 7.61 inches. Refer to Appendix B for calculations and tabulated results. Therefore, we conclude that the existing sewer system has adequate capacity for the proposed development.

COUNTY SANITATION DISTRICT (CSD) NOTES:

1. NO CONNECTION FOR DISPOSAL OF INDUSTRIAL WASTES SHALL BE MADE TO SEWERS SHOWN ON THESE DRAWINGS UNTIL A PERMIT FOR INDUSTRIAL WASTEWATER DISCHARGE HAS BEEN ISSUED BY CSD FOR SAID CONNECTION.

2. BEFORE BREAKING INTO A CSD SEWER OR MANHOLE, AND PRIOR TO FINAL ACCEPTANCE OF THE PROJECT, A CSD INSPECTOR SHALL BE NOTIFIED BY TELEPHONE AT (310) 638-1161 SO THAT REQUIRED INSPECTION CAN BE MADE.

3. CONSTRUCTION OR ABANDONMENT OF CSD SEWERS OR MANHOLES SHALL BE IN ACCORDANCE WITH THE LATEST EDITION OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION, AND CSD'S LATEST AMENDMENTS TO THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION AND STANDARD DRAWINGS FOR CONSTRUCTION. A COPY OF THE AMENDMENTS AND STANDARD DRAWINGS MAY BE OBTAINED AT THE PUBLIC COUNTER (ROOM 110) LOCATED AT CSD'S JOINT ADMINISTRATION OFFICE, 1955 WORKMAN MILL ROAD, WHITTIER, CA 90601.

LACFCD / LACPDW NOTES:

CROSSINGS AT LOS ANGELES COUNTY STORM DRAIN & SEWER FACILITIES

1. THE CONTRACTOR SHALL NOTIFY THE LOS ANGELES COUNTY DEPARTMENT OF PUBLIC WORKS THAT THE WORK INCLUDES A PIPELINE REPLACEMENT OR NEW PIPE LINE CROSSING ABOVE THE EXISTING STORM DRAIN OR COUNTY SEWER. PERMIT, IF REQUIRED, SHALL BE OBTAINED BY THE CONTRACTOR FOR THE CROSSING. WORK SHALL PROCEED ONLY ON COMPLIANCE WITH ALL REQUIREMENTS OF THE COUNTY DPW. CONTACT INFORMATION: LOS ANGELES COUNTY DEPARTMENT OF PUBLIC WORKS, 900 SOUTH FREMONT AVE., ALHAMBRA, CA 91803, TELEPHONE (626) 458 3129 (SEE LACDPW WEBSITE FOR ADDITIONAL INFORMATION).

2. IF LOS ANGELES COUNTY FLOOD CONTROL DISTRICT AND SEWER MAINTENANCE MANHOLES REQUIRE ADJUSTMENT, CONTRACTOR IS REQUIRED TO FOLLOW THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION ("GREENBOOK"), 2006 EDITION, SUBSECTION 302-5.8, PERTAINING TO ADJUSTMENTS OF MANHOLES AND OTHER STRUCTURES. IN ADDITION, A CONSTRUCTION PERMIT IS REQUIRED.

UTILITY AGENCY NOTES:

SHELL PIPELINE CO:
48 HOURS PRIOR TO COMMENCEMENT OF CONSTRUCTION ACTIVITIES, CONTACT RICH WALCK (310) 816-2067 TO ARRANGE FOR FIELD MARKINGS OF SHELL'S FACILITIES. THIS NOTIFICATION IS IN ADDITION TO TO NOTIFICATION THROUGH UNDERGROUND SERVICE ALERT. CONTRACTOR SHALL NOT PAVE OVER ANY SHELL SURFACE EQUIPMENT.

THE GAS COMPANY:
INFORM GAS COMPANY (OFFICE OF DALE GRABOYES, (310) 687-2013) OF CONSTRUCTION SCHEDULING AND ON SITE MEETINGS. GAS MAINS AND CROSSING LOCATIONS ARE BASED ON AS-BUILT INFORMATION PROVIDED BY SOUTHERN CALIFORNIA GAS COMPANY. THE MAIN LOCATIONS ARE APPROXIMATE ONLY AND DEPTHS OF THE MAINS VARY. ACTUAL LOCATION AND DEPTHS WILL NEED TO BE VERIFIED BY POT HOLING. ADDITIONALLY, THERE MAY BE SERVICE LATERALS FROM THE MAINS THAT ARE NOT IDENTIFIED.

AT&T CALIFORNIA (SBC-PACBELL):
CONTACT THE OFFICE OF TROY STANARD AT (310) 515-2418 AT LEAST 2 DAYS PRIOR START OF WORK. UNDERGROUND TELECOM DUCTS AND CROSSING LOCATIONS ARE BASED ON AS-BUILT INFORMATION PROVIDED BY AT&T CALIFORNIA. THE LOCATIONS ARE APPROXIMATE ONLY AND SIZES AND DEPTHS VARY. ACTUAL LOCATIONS AND DEPTHS WILL NEED TO BE VERIFIED BY POTHOLING. ADDITIONALLY, THERE MAY BE SERVICE CROSSINGS THAT ARE NOT IDENTIFIED.

PARK WATER:
CONTACT THE OFFICE OF MIKE ADAMS AT (562) 923-0711 X 1248 AT LEAST 2 DAYS PRIOR START OF WORK IN THE VICINITY OF PARK WATER . COORDINATE WITH PARK WATER STAFF DURING CONSTRUCTION.

CITY OF COMPTON MUNICIPAL WATER DEPARTMENT:
48 HOURS PRIOR TO COMMENCEMENT OF CONSTRUCTION OF ACTIVITIES NOTIFY COMPTON WATER DEPARTMENT (310) 605-5524.

GOLDEN STATE WATER:
CONTACT THE OFFICE OF MIKE THOMPSON AT (310) 767-8210 AT LEAST 48 HOURS PRIOR START OF WORK IN THE VICINITY OF GOLDEN STATE WATER . COORDINATE WITH GOLDEN STATE STAFF DURING CONSTRUCTION.

NOTE:

1. CITY OF COMPTON "SEWER SPILL PREVENTION PLAN" SHALL BE IMPLEMENTED DURING PROJECT WORK. CONTRACTOR SHALL SUBMIT BYPASS PLAN FOR SEWER SYSTEM DURING CONSTRUCTION IN COMPLIANCE THEREOF.

NOTICE TO CONTRACTOR:

CAUTION: THE ENGINEER PREPARING THESE PLANS WILL NOT BE RESPONSIBLE FOR, OR LIABLE FOR, UNAUTHORIZED CHANGES TO, OR USES OF THESE PLANS. ALL CHANGES TO THE PLANS MUST BE IN WRITING, AND MUST BE APPROVED BY THE PREPARER OF THESE PLANS.

THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITY FACILITIES SHOWN ON THESE PLANS WERE OBTAINED BY A SEARCH OF AVAILABLE RECORDS. THE LOCATIONS SHOWN ARE APPROXIMATE AND SHALL BE CONFIRMED IN THE FIELD BY THE CONTRACTOR. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAKING ANY NECESSARY ADJUSTMENTS TO ALIGNMENT AND/OR GRADE OF THE PROPOSED IMPROVEMENTS. THE CONTRACTOR IS REQUIRED TO TAKE DUE PRECAUTIONARY MEASURES TO PREVENT DAMAGE TO ANY UTILITY FACILITIES SHOWN AND ANY OTHER FACILITIES NOT SHOWN ON THESE PLANS.

ALL CONTRACTORS AND SUBCONTRACTORS PERFORMING WORK SHOWN ON THESE PLANS AGREE THAT, IN ACCORDANCE WITH GENERALLY ACCEPTED CONSTRUCTION PRACTICES, THEY WILL BE REQUIRED TO ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOB SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THE PROJECT. THIS INCLUDES PROVIDING FOR THE SAFETY OF ALL PERSONS AND PROPERTY AND SHALL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS. THE CONTRACTORS AND SUBCONTRACTORS FURTHER AGREE TO DEFEND, INDEMNIFY AND HOLD HARMLESS THE DESIGN PROFESSIONAL FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT, EXCEPT FOR LIABILITY ARISING FROM THE SOLE NEGLIGENCE OF THE DESIGN PROFESSIONAL.

CONTRACTOR NOTIFICATION:

BY SUBMITTAL OF A BID, THE CONTRACTOR REPRESENTS THAT THE SITES HAVE BEEN THOROUGHLY INVESTIGATED AND THAT ALL CONDITIONS HAVE BEEN ACCOUNTED FOR IN HIS BID. CONTRACTOR UNDERSTANDS THAT NO ADDED COSTS WILL BE ALLOWED FOR FAILURE TO ACCOMMODATE THE EXISTING CONDITIONS.

GENERAL NOTES

1. ALL WORK SHOWN ON THESE PLANS SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION ("GREENBOOK") LATEST EDITION, CALTRANS STANDARD PLANS LATEST EDITION, MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES (MUTCD) LATEST EDITION, MUTCD CALIFORNIA SUPPLEMENT LATEST EDITION, ANY OTHER REFERENCED STANDARDS, CONTRACT DOCUMENTS AND SPECIFICATIONS FOR THIS PROJECT.

2. ALL APPLICABLE ORDINANCES OF THE CITY OF COMPTON SHALL BE COMPLIED WITH.

3. AT THE DIRECTION OF THE ENGINEER, CONTRACTOR SHALL NOTIFY AFFECTED RESIDENTS, BUSINESSES AND AGENCIES 72-HOURS PRIOR TO START OF CONSTRUCTION.

4. CONTRACTOR SHALL HAVE SUFFICIENT MATERIALS ON HAND AT ALL TIMES TO EXPEDITE ANY EMERGENCY REPAIR.

5. THE CONTRACTOR SHALL NOTIFY THE CITY DIRECTOR OF PUBLIC WORKS FORTY-EIGHT HOURS PRIOR TO STARTING WORK, TELEPHONE NUMBER (310) 605-5505.

6. WORK IN PUBLIC STREETS, ONCE BEGUN SHALL BE PROSECUTED TO COMPLETION WITHOUT DELAY SO AS TO PROVIDE MINIMUM INCONVENIENCE TO ADJACENT OWNERS AND TO THE TRAVELING PUBLIC. FAILURE TO COMPLY WITH THIS REQUIREMENT IS A
OF TITLE 16 OF THE COUNTY CODE, HIGHWAY PERMIT CODE.

RSECTING UTILITY INSTALLATIONS WILL BE RELOCATED BY THE CONTRACTOR AFTER REVIEW BY THE AFFECTED UTILITY
?RIOR APPROVAL BY THE CITY ENGINEER.

/ENT OF CONFLICT BETWEEN DETAILS, THE MORE STRINGENT SHALL TAKE PRECEDENCE. THE DECISION OF THE
SHALL BE FINAL.

TRACTOR SHALL COORDINATE ALL REQUIRED SITE INSPECTIONS FROM ALL ENTITIES HAVING JURISDICTION.
ATION IS TO BE MADE SUFFICIENTLY IN ADVANCE OF NEEDED SITE INSPECTION THAT THE PROGRESS OF THE WORK IS
ED NOR THE QUALITY AFFECTED. CONTRACTOR SHALL PAY ALL COSTS OF PERMIT AND SITE REVIEW BY ANY UTILITY OR

GLEN W.C KAU, P.E. LICENSE No. C-56657 1-7-16 DATE

\CTOR SHALL SUBMIT A CONSTRUCTION SCHEDULE AS REQUIRED BY THE SPECIFICATIONS. UNLESS NOTIFIED IN
HE PROPOSED CONSTRUCTION SEQUENCE SHALL BE FOLLOWED. WRITTEN REQUEST FOR APPROVAL IS REQUIRED TO
: SCHEDULE.

\NTRACTOR SHALL VERIFY THAT ALL SETS OF PLANS AND SPECIFICATIONS ARE CURRENT AND APPROVED FOR
:TION.

BUILT SET OF PLANS FOR UPDATING BY REDLINE SHALL BE ON SITE AT ALL TIMES AND BE AVAILABLE TO THE ENGINEER.
. BE USED ONLY AS BUILT UPDATING. VERIFICATION THAT AS BUILT DRAWINGS ARE CURRENT IS A REQUIREMENT FOR PROGRESS PAYMENT REQUEST SUBMITTAL.

13. CONTRACTOR AND ALL SUBCONTRACTORS SHALL POSSESS VALID CONTRACTOR LICENSES AND CURRENT CITY BUSINESS LICENSES. ONSITE VENDORS SHALL ALSO BE IN COMPLIANCE WITH LOCAL BUSINESS LICENSE REQUIREMENTS.

14. THE CONTRACTOR SHALL PROVIDE TEMPORARY FENCE TO SECURE THE WORK AND WORKSITE FROM DAMAGE AND THEFT. CONTRACTOR SHALL REPAIR OR REPLACE ANY LOSS OR DAMAGE INCURRED UNTIL WRITTEN ACCEPTANCE OF THE WORK BY THE CITY.

15. CONTRACTOR IS LIABLE FOR ALL INJURY OR DAMAGE CAUSED BY ANY WORK, STORAGE OF MATERIALS AND EQUIPMENT, AND ANY OTHER ACTIVITY ON THE SITE.

16. THE CONTRACTOR SHALL FULLY ASSUME RESPONSIBILITY FOR ANY DAMAGES TO EXISTING FACILITIES, BUILDINGS, UTILITIES, STRUCTURES, OR OTHER APPURTENANCES DUE TO CONTRACTOR'S, SUBCONTRACTOR'S, VENDORS OR EMPLOYEES WHETHER INTENTIONAL OR ACCIDENTAL.

17. WRITTEN DIMENSIONS TAKE PRECEDENCE OVER SCALED DIMENSIONS AND SHALL BE VERIFIED ON THE JOBSITE AND ANY DISCREPANCY BROUGHT TO THE ATTENTION OF THE ENGINEER FOR REVIEW. WORK AT OR AFFECTED BY ANY CONFLICT SHALL BE HALTED UNTIL A RESOLUTION OR REVISION HAS BEEN DETERMINED.

18. THE CONTRACTORS WORK FORCE SHALL CONSIST OF PERSONS SKILLED IN THE TRADES AND TYPE OF WORK INVOLVED. LESS TRAINED WORKERS SHALL BE CLOSELY SUPERVISED BY SKILLED TRADESMEN.

19. THESE PLANS AND REFERENCES HEREIN ARE HEREBY MADE A PART OF THE SPECIFICATIONS AND CONTRACTUAL AGREEMENT.

20. NO REVISIONS SHALL BE MADE TO THESE PLANS WITHOUT WRITTEN APPROVAL BY THE CITY ENGINEER.

21. THERE SHALL BE NO ABOVE-GROUND OBSTRUCTION IN ANY PORTION OF THE SIDEWALK EXCEPT WHERE THE WIDTH, EXCLUSIVE OF THE TOP OF CURB, IS 6 FT. OR GREATER. A CLEAR WALKING PATH OF AT LEAST FOUR (4) FT. MIN. SHALL BE MAINTAINED AT ALL TIMES.

22. THE CONTRACTOR'S ATTENTION IS DIRECTED TO SECTION 7-10.4.1 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION IN REGARDS TO SAFETY ORDERS AND THE CONTRACTOR SHALL COMPLY IN ALL WAYS WITH THE REQUIREMENTS THEREOF. ALL WORK SHALL BE IN COMPLIANCE WITH THE REQUIREMENTS OF Cal/OSHA.

23. INSPECTION PROVIDED BY THE CITY CAN IN NO WAY BE CONSTRUED AS SAFETY INSPECTION.

24. PRIOR TO STARTING AND/OR DURING ALL WORK. THE CONTRACTOR SHALL FULLY COMPLY WITH THE "CALIFORNIA SAFETY AND HEALTH ACT 1976" INCLUDING ALL REVISIONS AND AMENDMENTS THERETO.

25. THE CONTRACTOR SHALL SUBMIT A TRAFFIC CONTROL PLAN FOR APPROVAL TO THE CITY OF COMPTON PRIOR TO START OF ANY WORK. CONTRACTOR SHALL IMPLEMENT THE APPROVED TRAFFIC CONTROL PLAN TO PROVIDE SAFETY TO THOSE ON THE SITE AND TO THE MOTORING AND PEDESTRIAN PUBLIC.

26. CONTRACTOR SHALL MAINTAIN AND RESTORE ALL TRAFFIC SIGNS ERECT AND IN SAME POSITION AS ORIGINALLY FOUND.

27. NO REPRESENTATIVE OF THE CITY OR ITS AGENCIES WILL SURVEY OR OTHERWISE LAYOUT ANY PORTION OF THE WORK.

28. CONTRACTOR SHALL CONFORM TO THE "MINIMUM PUBLIC SAFETY REQUIREMENTS FOR OPEN EXCAVATIONS" AS SHOWN IN THE LOS ANGELES COUNTY PUBLIC WORKS STANDARD 6008-0.

29. AT JOBSITE, ALL WORK SHALL BE IN COMPLIANCE WITH THE REQUIREMENTS OF Cal/OSHA. ALL REQUIRED JURISDICTIONALLY REQUIRED NOTICES SHALL BE DISPLAYED AT SITE.

30. THE CONTRACTOR'S ATTENTION IS EXPRESSLY DIRECTED TO ALL THE REQUIREMENTS AND PROVISIONS OF THE STATE OF CALIFORNIA SAFETY REGULATIONS. CONFORMANCE THERETO SHALL BE STRICTLY ENFORCED THROUGH THE DURATION OF THE PROJECT.

31. BARRICADES WITH FLASHING LIGHTS ARE TO BE MAINTAINED ON ALL OBSTRUCTIONS WITHIN STREET RIGHTS OF WAY AND PEDESTRIAN OR VEHICLE ACCESSIBLE AREAS AT ALL TIMES DURING THE PROJECT. CONSTRUCTION WARNING SIGNS AND FLAGGERS ARE TO BE IN PLACE DURING ALL TIMES OF WORK.

32. CONTRACTOR SAFETY PROGRAM TO BE IN PLACE AND AVAILABLE FOR EXAMINATION BY THE ENGINEER. IT SHALL BE KEPT AT THE JOBSITE OFFICE OR IN THE VEHICLE OF THE ONSITE SUPERVISION.

33. THE CONTRACTOR SHALL OBTAIN ANY AND ALL REQUIRED PERMITS FOR CONSTRUCTION OF THE PROJECT FROM THE CITY OF COMPTON AND ANY AGENCIES HAVING JURISDICTION, AT CONTRACTOR'S EXPENSE.

34. ALL CONTRACTOR EQUIPMENT SHALL HAVE BEEN INSPECTED AND PERMITTED BY SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT FOR EMISSION COMPLIANCE.

35. PERMIT AND INSPECTIONS FEES ARE THE RESPONSIBILITY OF THE CONTRACTOR UNLESS SPECIFIED TO BE REIMBURSED OR TO BE AT NO COST.

36. CONTRACTOR SHALL COMPLY WITH ALL PROVISIONS AND REQUIREMENTS OF ALL PERMITS PERTAINING TO THE PROJECT. THE REQUIREMENTS THEREIN ARE BY REFERENCE INCLUDED IN THE CONTRACT.

37. SEPARATE PERMIT FOR WORK IN ANY STATE HIGHWAY MUST BE OBTAINED FROM THE STATE OF CALIFORNIA DEPARTMENT OF TRANSPORTATION, 120 SOUTH SPRING STREET, LOS ANGELES CA.

38. CONTRACTOR SHALL COMPLY WITH ALL STORMWATER POLLUTION CONTROL, NPDES AND REGIONAL WATER QUALITY CONTROL BOARD (RWQCB) REQUIREMENTS, INCLUDING BUT NOT LIMITED TO BEST MANAGEMENT PRACTICE (BMPs).

39. THE CONTRACTOR SHALL TAKE ALL NECESSARY AND PROPER PRECAUTIONS TO PROTECT ADJACENT PROPERTIES FROM ALL DAMAGE THAT MAY OCCUR FROM STORM WATER AND/OR DEPOSITION OF DEBRIS FROM ANY AND ALL WORK IN CONNECTION WITH PROJECT CONSTRUCTION.

40. CONTRACTOR SHALL MAINTAIN EXISTING PROJECT AREA DRAINAGE AND SHALL INSTALL ADDITIONAL TEMPORARY DRAINAGE SYSTEMS TO PROTECT THE SITE AND ADJACENT PROPERTIES.

41. CONTRACTOR SHALL KEEP THE SITE CLEAN AND FREE OF RUBBISH. TRASH AND EXCESS MATERIALS SHALL BE DISPOSED OF OFFSITE DAILY.

42. CONTRACTOR SHALL PROVIDE FOR DUST CONTROL AT ALL TIMES TO THE SATISFACTION OF THE CITY ENGINEER AND ANY AGENCY HAVING JURISDICTION, AND SHALL BE IN COMPLIANCE WITH THE SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT (A.Q.M.D.) RULE 403 FOR DUST CONTROL AND MITIGATION.

43. UPON COMPLETION OF THIS PROJECT, THE CONTRACTOR SHALL BE RESPONSIBLE FOR REPAIRING ANY DAMAGE INCURRED DURING THE PROGRESS OF THE PROJECT, WITHOUT REGARD TO FAULT OR CAUSE.

44. CALL UNDERGROUND SERVICE ALERT, 1-800-227-2600 AT LEAST 48 HOURS PRIOR TO ANY EXCAVATION WHICH MAY DAMAGE OR INTERRUPT THE SERVICE OF ANY UNDERGROUND UTILITY.

45. THE CONTRACTOR IS FULLY RESPONSIBLE FOR KNOWING THE LOCATION OF ALL UTILITIES AND SHALL COMPLY WITH ALL UTILITY NOTES ON THE PLANS AND SPECIFICATION. THE CONTRACTOR SHALL FULLY COORDINATE ALL HIS WORK WITH AFFECTED UTILITY COMPANIES AND AGENCIES FOR ALL UTILITIES WHETHER SHOWN ON THESE PLANS OR NOT.

46. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE PROTECTION OF ALL EXISTING UTILITY LINES, VALVES, METERS, ETC. WITHIN THE LIMITS OF WORK WHETHER THEY ARE SHOWN ON THESE PLANS OR NOT.

47. CONTRACTOR SHALL KEEP ALL TRAFFIC SIGNAL LIGHTS IN OPERATION AT STREET INTERSECTIONS AFFECTED BY UTILITY CONSTRUCTION OR PAVING WORK.

48. THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITY PIPES OR STRUCTURES SHOWN ON THESE PLANS IS OBTAINED BY A SEARCH OF AVAILABLE RECORDS. TO THE BEST OF OUR KNOWLEDGE, THERE ARE NO EXISTING UTILITIES EXCEPT AS SHOWN ON THESE PLANS. THE CONTRACTOR IS REQUIRED TO TAKE PRECAUTIONARY MEASURES TO PROTECT THE UTILITY LINES SHOWN AND ANY OTHER LINES NOT OF RECORD OR NOT SHOWN ON THESE PLANS.

49. SOUTHERN CALIFORNIA EDISON CO. SHALL BE NOTIFIED FOR ANY ELECTRICAL MANHOLES, VAULTS, OR PULL BOXES WHICH REQUIRE ADJUSTMENT. ANY POLE RELOCATIONS WILL BE BY THE OWNING UTILITY.

50. POWER POLE PROTECTION SHALL BE IN ACCORDANCE WITH THE REQUIREMENTS OF SOUTHERN CALIFORNIA EDISON CO.

51. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO CONTACT THE OWNER OF ANY GAS FACILITY VALVE COVERS AND COORDINATE THEIR ADJUSTMENT TO GRADE OR OTHER RELOCATION AS REQUIRED.

52. TELEPHONE AND CABLE MANHOLES, VAULTS, BOXES AND APPURTENANCES SHALL BE PROTECTED FROM THE WORK. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO CONTACT THE NECESSARY UTILITY AND COORDINATE ANY WORK WHICH WILL REQUIRE ADJUSTMENT OF COMMUNICATION FACILITIES. ACCESS FACILITIES SHALL BE ADJUSTED TO GRADE IF REQUIRED.

53. APPROVAL OF THESE PLANS BY THE CITY OR THEIR REPRESENTATIVES DOES NOT CONSTITUTE A REPRESENTATION AS TO ACCURACY OF THE LOCATION, EXISTENCE, OR ABSENCE OF ANY UNDERGROUND STRUCTURE OR UTILITY WITHIN THE PROJECT AREA LIMITS.

54. ALL CONSTRUCTION JOINTS FOR P.C.C. CURBS, GUTTERS, AND SIDEWALKS SHALL BE IN ACCORDANCE WITH THE STANDARD SPECIFICATION FOR PUBLIC WORKS CONSTRUCTION ("GREENBOOK" LATEST EDITION).

55. ANY BROKEN CONCRETE CURB AND GUTTER, CONCRETE SIDEWALK, TREE WELLS OR ANY OTHER STRUCTURES SHALL BE REMOVED AND REPLACED BY THE CONTRACTOR PER RECOMMENDATION BY THE CITY PROJECT INSPECTOR WITH NO EXTRA COMPENSATION, THE CONTRACTOR IS RESPONSIBLE TO FIELD CHECK FOR SUCH CONDITIONS PRIOR TO SUBMITTAL OF BID.

56. ALL SIDEWALK, CURB AND GUTTER REPAIRS SHALL JOIN WITH THE EXISTING AT THE NEAREST CONSTRUCTION JOINTS AND BE ADJUSTED TO MATCH WITH THE GRADE OF THE EXISTING CONCRETE STRUCTURES.

57. PREFORMED EXPANSION JOINT MATERIAL SHALL BE PLACED IN GUTTER, SIDEWALK, CURB AND RAMP JOINTS AT UNIFORM INTERVALS NOT TO EXCEED 25 FT., AT THE TOP OF "X" OF DRIVEWAYS, AT THE END OF CURVES, AND HANDICAP RAMPS.

58. HANDICAP RAMPS SHALL BE INSTALLED AT ALL NEW AND REPLACEMENT INTERSECTION SIDEWALK, CURB AND GUTTER INSTALLATIONS. TRUNCATED DOME ADA COMPLIANT DETECTABLE SURFACES SHALL BE INSTALLED, COLOR TO BE SELECTED BY THE CITY.

59. ALL SURFACES TO BE JOINED SHALL BE CLEANED, PREPARED, ABRADED, PRIMED, AND OTHERWISE BE MADE READY FOR JOINING WITH THE NEW CONSTRUCTION.

60. ALL NEW SIDEWALK, CURB, GUTTER, SLABS AND OTHER EXPOSED CONCRETE SURFACES SHALL BE FINISHED TO MATCH THE EXISTING SURFACES. IN THE EVENT THERE ARE DIFFERING ADJACENT SURFACES, THE ENGINEER SHALL SELECT THE SURFACE TO MATCH OR DIRECT THE FINISH TO BE APPLIED TO THE NEW OR REPLACED WORK.

61. ABANDON EXISTING FIRE HYDRANT AS REQUIRED FOR RELOCATION OF NEW FIRE HYDRANT. EXISTING FIRE HYDRANT AND RISER SHALL BE REMOVED AND IMPROVEMENTS RESTORED AS PART OF INSTALLATION OF NEW FIRE HYDRANT ASSEMBLY.

62. AGGREGATE BASE TO BE COMPACTED TO A MINIMUM OF 95%, SUB-BASE TO BE COMPACTED TO A MINIMUM OF 90%. REFERENCE SSPWC SECTIONS 211-1 / 306-1, UNLESS OTHERWISE NOTED.

63. NO FILL TO BE PLACED, UNTIL THE CITY GRADING INSPECTOR HAS INSPECTED AND APPROVED THE UNDISTURBED BOTTOM AND SIDES OF THE EXCAVATION.

64. SANITARY SEWER, WATER, STORM DRAIN, VAULT, AND OTHER MANHOLE FRAME AND COVER ASSEMBLIES SHALL BE RAISED TO NEW GRADE IF DISTURBED. USE OF CAST FERROUS RAISING RINGS IS NOT ACCEPTABLE.

65. COMPLETED ASPHALT PAVING OR REPAIR PAVING SHALL BE COMPACTED BY ACCEPTABLE MEANS TO PROVIDE A SURFACE FREE OF DEPRESSIONS, BUMPS, RIDGES OR OTHER IRREGULARITIES OR OTHER MARKINGS.

66. PAVEMENT MARKINGS SHALL BE REPLACED USING THE CURRENT MARKING METHOD IN USE BY THE CITY FOR NEW INSTALLATIONS. MARKINGS SHALL COMPLY WITH ALL JURISDICTIONAL REQUIREMENTS.

67. ALL CONSTRUCTION STAKING AND RELATED SURVEYS SHALL BE PROVIDED BY THE CONTRACTOR.

68. CONTRACTOR SHALL PROTECT ALL STREET CENTERLINE MONUMENTS AND TIES. ANY CENTERLINE MONUMENTS/TIES DISTURBED DURING THE CONSTRUCTION SHALL BE RESET BY THE CONTRACTOR TO THE SATISFACTION OF THE DIRECTOR OF PUBLIC WORKS AND RECORDED WITH LOS ANGELES COUNTY AT NO COST TO THE CITY.

69. CONTRACTOR SHALL UTILIZE A LICENSED SURVEYOR SERVICE TO INVESTIGATE THE PROJECT AREA, TIE OUT ANY MONUMENT WHICH MAY BE DISTURBED AND TO RESET AND RECORD THE SURVEY WITH THE COUNTY WHERE REQUIRED. LOCATE ALL MONUMENTS AND VERIFY TIE OUTS PRIOR TO BEGINNING CONSTRUCTION.

70. ELEVATIONS ARE IN FEET ABOVE U.S.C. AND G.S. SEA LEVEL, DATUM AS SHOWN, AND REFERENCED LOCAL BENCHMARKS.

71. IN ADDITION TO "AS BUILTS" CONTRACTOR SHALL PROVIDE GRADE SHEETS WITH STATIONING REPRESENTING COMPLETED WORK AS CONSTRUCTED. STATIONING OF ALL CONNECTIONS SHALL BE SHOWN.

72. THE CONTRACTOR ACKNOWLEDGES BY ENTERING INTO THE CONTRACT FOR THE WORK THAT ALL NECESSARY INSPECTIONS AND INVESTIGATIONS WERE UNDERTAKEN PRIOR TO BID AND CONTRACT EXECUTION.

73. SUFFICIENTLY PRIOR TO COMMENCEMENT OF THE WORK, THE CONTRACTOR SHALL INVESTIGATE THE AREA OF THE PROPOSED NEW CONSTRUCTION AND NOTIFY THE ENGINEER OF ANY CONFLICTS WHICH REQUIRE REVISION OF THE WORK. EXTRA WORK INCURRED BY CONFLICTS ENCOUNTERED DURING PERFORMANCE OF THE WORK WHICH SHOULD HAVE BEEN APPARENT TO THE INVESTIGATION WILL NOT JUSTIFY ADDED COSTS.

74. THE CONTRACTOR SHALL REVIEW AND VERIFY CONDITIONS AT THE JOB SITE BEFORE COMMENCING ANY PORTION OF THE WORK. COMPARE ACTUAL CONDITIONS WITH DRAWINGS TO ASCERTAIN CONDITIONS UNDER WHICH WORK IS PERFORMED: CHECK AND CONFIRM LOCATION OF EXISTING STRUCTURES, EQUIPMENT, AND UTILITIES WHICH MAY AFFECT WORK. COMMENCEMENT OF WORK SHALL CONSTITUTE FULL ACCEPTANCE OF THE EXISTING SITE CONDITIONS. THE CONTRACTOR SHALL REPORT ALL DISCREPANCIES TO THE ENGINEER FOR RESOLUTION PRIOR TO COMMENCEMENT OF WORK.

75. ANY PLANTED AREAS DISTURBED BY THE WORK SHALL HAVE ALL ROOTS AND DELETERIOUS MATERIALS REMOVED AND BE REPLANTED INCLUDING NEW TOPSOIL AND ROOT BARRIERS INSTALLED TO PROVIDE A COMPLETE REPLACEMENT OF THE ORIGINAL TO THE SATISFACTION OF THE ENGINEER.

76. ALL TREES TO REMAIN SHALL BE PROTECTED IN PLACE AND BE WATERED AND TRIMMED AS SCHEDULED BY OWNER IF ACCESS IS IMPEDED.

ROADWAY RECONSTRUCTION GENERAL NOTES

1. CURB AND GUTTER TO BE REPLACED TO MATCH EXISTING AND IN ACCORDANCE WITH "GREENBOOK" STANDARDS.

2. JOIN NEW CURB AND GUTTER TO ASPHALT PAVEMENT PER DETAILS SHOWN OR REFERENCED. CONSTRUCT CURB AND GUTTER TYPE A1-6 (150) AND A1-8 (200) PER THE "GREENBOOK" STD PLAN 120-2 AND CITY REQUIREMENTS UNLESS OTHERWISE SHOWN.

3. JOIN NEW ASPHALT PAVING TO CURB AND GUTTER PER DETAILS SHOWN OR REFERENCED. PRIME ALL AREAS TO BE JOINED. SAWCUT ALL CONCRETE AND ASPHALT PAVING TO BE JOINED PRIOR TO DEMOLITION AND REMOVALS.

4. REPLACE ANY DAMAGED ALLEY APPROACH PER DETAIL HEREIN AS SHOWN AND IN ACCORDANCE WITH "GREENBOOK" STANDARDS. CONCRETE TO BE 520-C-2500. MATCH EXISTING CURB AND GUTTER, SIDEWALK AND ALLEY GRADES. DAMAGED AREAS TO BE REPAIRED SHALL BE REMOVED TO THE NEXT SCORE LINE OR JOINT.

5. ANY NEW CURB AND GUTTER CONSTRUCTED AT EXISTING ASPHALT WEARING COURSE SHALL BE JOINED WITH A MINIMUM SIX INCH NOTCH PER STANDARD DETAIL.

6. DRIVEWAY APPROACHES DISTURBED BY THE WORK SHALL BE REPLACED PER DETAILS HEREIN OR GREEN BOOK STANDARDS.

7. REPLACE DISTURBED TRAFFIC LOOPS & DETECTION SYSTEM COMPLETE & OPERATIONAL.

8. COUNTY AND CITY STANDARDS SHALL BE FOLLOWED FOR STENCIL MARKING ALL CATCH BASINS OR STORM DRAIN INLETS WHICH HAVE BEEN INSTALLED OR DISTURBED BY THE CONSTRUCTION.

9. MANHOLE FRAME AND COVERS, UTILITY VAULTS, VALVE BOXES, AND OTHER UTILITY ACCESS STRUCTURES SHALL BE RAISED TO MATCH FINISH SURFACE IN ACCORDANCE WITH STANDARD SPECIFICATIONS, CITY AND COUNTY REQUIREMENTS.

10. BLUE REFLECTORS SHALL BE INSTALLED ON THE ROADWAY SURFACE AT THE REQUIRED LOCATIONS TO INDICATE THE LOCATION OF EACH HYDRANT. REFLECTORS SHALL BE IN ACCORDANCE WITH FIRE DEPARTMENT REGULATIONS.

11. ALL WORK IN COUNTY ROADWAY SHALL BE IN ACCORDANCE WITH LACDPW REQUIREMENTS AND SHALL BE INSPECTED BY LACDPW. CONTRACTOR SHALL APPLY FOR AND OBTAIN COUNTY PERMIT AT CONTRACTOR'S EXPENSE.

12. THE EXISTENCE AND LOCATION OF ANY MANHOLES, UTILITY VAULTS, PULL BOXES, WATER METERS, VALVES AND OTHER UTILITIES ARE OBTAINED THROUGH TOPOGRAPHIC SURVEY AND ARE TO BE PROTECTED WITHIN THE AFFECTED WORK AREA WITHOUT ADDITIONAL COST TO THE OWNER.

13. TRAFFIC STRIPING AND PAVEMENT MARKING SHALL BE THERMOPLASTIC AS SPECIFIED, PER CALTRANS 84 AND PER CITY OF COMPTON REQUIREMENTS.

GENERAL SIGNAGE AND STRIPING NOTES

1. ALL STRIPING AND SIGNAGE REQUIRED TO RESTORE DAMAGE TO EXISTING SHALL BE DONE IN CONFORMANCE WITH THE APPLICABLE CALTRANS STANDARD PLANS AND PROVISIONS OF THE CALTRANS STANDARD SPECIFICATIONS, INCLUDING SECTION 84 AND CITY AND COUNTY STANDARDS AND REQUIREMENTS.

2. COMPLY WITH ALL MARKING REQUIREMENTS OF AGENCY HAVING JURISDICTION. PAVEMENT LEGENDS SHALL CONFORM TO CITY OF COMPTON STENCILS. SIGNS, STRIPES AND PAVEMENT LEGENDS SHALL BE REFLECTORIZED.

3. TRAFFIC STRIPING AND PAVEMENT MARKING SHALL BE THERMOPLASTIC IN ACCORDANCE WITH CALTRANS STANDARD SPECIFICATIONS SECTION 84 AND PROJECT BID DOCUMENTS.

4. STENCILS ARE REQUIRED AT ALL CATCH BASINS. CATCH BASIN MARKINGS MAY BE PAINTED.

5. REPLACE ALL SIGNAGE DAMAGED BY THE WORK IN KIND WITH NEW PER BID DOCUMENTS AND CITY / AGENCY / JURISDICTIONAL REQUIREMENTS.

TRAFFIC CONTROL AND SAFETY

1. THE CONTRACTOR SHALL TAKE ALL PRECAUTIONS NECESSARY, INCLUDING SIGNING, BARRICADES, SITE SECURITY, ACCESS, DETOURS, AND DEDICATED TRAFFIC CONTROL PERSONNEL TO PROTECT THE MOTORING AND PEDESTRIAN PUBLIC AND MAINTAIN ACCESS TO PRIVATE PROPERTY DURING WORKING AND NON-WORKING HOURS.

2. THE CONTRACTOR SHALL PREPARE AND SUBMIT A PROJECT TRAFFIC CONTROL PLAN IN CONFORMANCE WITH THE WATCH MANUAL AND THE SPECIFICATIONS WHICH SHALL BE COORDINATED WITH THE CONSTRUCTION SCHEDULE PRIOR TO CONSTRUCTION, EXCAVATION, PAVING, OR OTHER OPERATIONS THAT WILL DISRUPT TRAFFIC OR ACCESS TO RESIDENCES OR BUSINESSES. PLAN SHALL BE IMPLEMENTED DURING ALL CONSTRUCTION.

3. WHERE PARKING CONTROL IS REQUIRED, APPROVED TEMPORARY DATE LIMITED NO PARKING SIGNS SHALL BE POSTED NO MORE THAN 100 FEET APART AT LEAST 72 HOURS PRIOR TO WORK.

4. DURING PAVING OPERATIONS, THE CONTRACTOR SHALL PROVIDE INDIVIDUALS OR EQUIPMENT DESIGNATED TO PERFORM AND MAINTAIN TRAFFIC CONTROL ONLY.

5. ONE LANE IN EACH DIRECTION SHALL BE MAINTAINED AT ALL TIMES OR FLAGGER CONTROL OF TRAFFIC SHALL BE IMPLEMENTED.

6. EACH EXCAVATION LEFT OVERNIGHT SHALL BE SECURED WITH PLATES PER CALTRANS AND SHALL HAVE MINIMUM 3 FLASHING BARRICADES EACH DIRECTION AT EXCAVATION AT MAXIMUM SPACING OF 20 FEET.

SEQUENCE NOTES

1. A COMPLETE SCHEDULE OF THE WORK SHOWING THE FOLLOWING SEQUENCE SHALL BE PREPARED: VERIFY & TIE OUT MONUMENTS, TRAFFIC CONTROL PLAN PER SPECIAL PROVISIONS, AND MATERIAL SUBMITTALS, SET UP FACILITIES AND LAY DOWN AREA,SURVEY AND STAKING FOR CONSTRUCTION, SAWCUT, PAVING REMOVAL AND DISPOSAL, REMOVAL OF CONCRETE IMPROVEMENTS, TRENCHING AND DISPOSAL OF EXISTING PIPE, STRUCTURES REMOVAL AND DISPOSAL, WATER MAIN CONSTRUCTION, VALVE BOX CONSTRUCTION, SERVICE CONNECTION AND CONSTRUCTION, PIPELINE TESTING, PIPELINE DISINFECTION, BACKFILL AND COMPACTION, PREPARATION OF BASE, PAVEMENT GRIND, PAVING BASE COURSE, PAVING WEAR COURSE, ADJUSTMENT OF VALVE BOXES AND RELATED COVERS/BOXES TO GRADE, RESTORATION OF CONCRETE IMPROVEMENTS, RE-STRIPING, PAVEMENT MARKER REPLACEMENT, PLACEMENT OF SIGNAGE, AS BUILTS, CLEAN UP AND MOVE OFF.

SHEET 02 OF 17 SHEETS

Z:\CS PROJECTS\Compton\Sewer CIP 10-18 and CIP 10-21\PLANS\DWG\CIP 10-18 COMPTON AND WILMINGTON SEWER\GS- GENERAL NOTES.dwg 01/04/16 11:04am

WATER MAIN CONSTRUCTION GENERAL NOTES

1. REMOVE AND LEGALLY DISPOSE OF EXISTING ASBESTOS CEMENT PIPE. ALL LEGALLY MANDATED MEASURES SHALL BE TAKEN TO CONTAIN ALL MATERIALS FROM THE ACP. THE PUBLIC SHALL BE ISOLATED FROM ALL DEBRIS FROM THE PIPE OR ADJACENT CONTAMINATED SOILS OR OTHER MATERIALS. ADDITIONAL REQUIREMENTS ARE LISTED IN THE PROJECT SPECIFICATIONS.

2. WATER MAIN PIPE SHALL BE DUCTILE IRON MINIMUM THICKNESS CLASS 52, PRESSURE CLASS 350, DOUBLE CEMENT MORTAR LINED, UNLESS NOTED OTHERWISE.

3. ALL FITTINGS SHALL BE RATED EQUAL TO OR GREATER THAN THE REQUIRED PIPE CLASSIFICATIONS.

4. WHERE DIRECTED, REPLACE IRON RESIDENTIAL AND COMMERCIAL SERVICES SHOWN OR WHICH ARE DISTURBED OR DISCONNECTED BY THE CONSTRUCTION. ALL SERVICES SHALL INCLUDE SERVICE CLAMP, CORPORATION STOP, COPPER TYPE K TUBE, AND CURB STOP. COPPER SHALL BE FIELD BENT PER PLUMBING CODE STANDARDS. IF CONNECTION BETWEEN COPPER PIPES IS REQUIRED, SILVER SOLDER SHALL BE USED. COPPER SERVICES SHALL BE RECONNECTED AS A PART OF WATERMAIN INSTALLATION. COMPRESSION COUPLING OPTIONAL PENDING CITY APPROVAL.

5. WHERE DIRECTED, REMOVE EXISTING METER BOXES AND INSTALL NEW METER BOXES AT ALL NEW OR REPLACED RESIDENTIAL AND COMMERCIAL SERVICE CONNECTION LOCATIONS.

6. ANY SEWER LATERAL DAMAGED BY THE CONSTRUCTION SHALL BE REPLACED FROM SEWER MAIN TO RECONNECT AT SOUND PIPE. AT NO COST TO THE CITY.

7. PROVIDE NEW BLOW OFF ASSEMBLY PER PLAN DETAIL AND SPECIFICATION REQUIREMENTS AT LOCATIONS SHOWN ON THE PLANS WHEN SO DIRECTED BY THE ENGINEER.

8. PROVIDE NEW COMBINATION VACUUM RELIEF / AIR RELEASE VALVE ASSEMBLY PER PLAN DETAIL AND SPECIFICATION REQUIREMENTS AT LOCATIONS SHOWN ON THE PLANS OR AT HIGH POINTS WHEN SO DIRECTED BY THE ENGINEER.

9. ALL NECESSARY TRANSITION FITTINGS SHALL BE PROVIDED AND INSTALLED TO CONNECT THE NEW PIPING, VALVES, AND FITTINGS TO EXISTING PIPING AND APPURTENANCES OF DISSIMILAR MATERIALS AS AN INTEGRAL PART OF THE WORK REQUIRED FOR A COMPLETE AND OPERATIONAL SYSTEM.

10. ALL GATE AND BUTTERFLY VALVES SHALL BE INSTALLED COMPLETE WITH VALVE BOX ASSEMBLIES WITH A CAST COVER MARKED AND PAINTED IN ACCORDANCE WITH COMPTON WATER DEPARTMENT REQUIREMENTS AND PER PLAN DETAIL.

11. CONSTRUCTION PERMIT AND ALL JURISDICTIONAL PERMITS SHALL BE OBTAINED AND PUBLIC WORKS/JURISDICTIONAL CONSTRUCTION INSPECTION SCHEDULED PER CITY AND/OR JURISDICTIONAL REQUIREMENTS AT CONTRACTOR'S EXPENSE.

12. THRUST BLOCKS, PER APPLICABLE PLAN DETAILS, SHALL BE INSTALLED AT ALL CHANGES OF DIRECTION OF THE PIPING (INCLUDING TEES AND PIPE CAPS). ALL THRUST BLOCKS SHALL BEAR UPON UNDISTURBED SOLID SOIL WITH A BEARING AREA PER CHART SHOWN WITH THRUST BLOCK DETAILS. GREASE ALL PIPE AND FITTING CONTACT AREAS. DO NOT COVER ANY PIPE JOINT WITH CONCRETE. UNSUITABLE SOIL SHALL BE REMOVED AND REPLACED WITH ADDITIONAL CONCRETE THRUST BLOCK MATERIAL. SHOULD EXTENSIVE UNSUITABLE SOIL BE ENCOUNTERED, THE WORK SHALL BE SUSPENDED AND THE ENGINEER NOTIFIED. WORK SHALL BE DISCONTINUED IN THE IMMEDIATE AREA UNTIL WRITTEN DETERMINATION MADE. VERTICAL DIRECTION CHANGE OR FITTINGS SHALL BE STRAPPED PER DETAILS.

13. ANY VALVE OR FITTING INSTALLED FOR FUTURE USE SHALL BE PRESSURE CAPPED, PLUGGED, OR BLIND FLANGED TO SECURE THE LINE AND PREVENT LEAKAGE. THRUST BLOCK SHALL BE INSTALLED.

14. ALL FIRE HYDRANT INSTALLATIONS INCLUDE CONNECTION TO THE WATER MAIN, THRUST BLOCKS, CUT IN, NEW TEE, ALL PIPE AND FITTINGS, NEW 6" CUT OFF GATE VALVE, VALVE BOX COMPLETE PER DETAIL INCLUDING CONCRETE COLLAR, 6" CLOW MODEL 850 WET BARREL HYDRANT, CONCRETE PAD, BREAKAWAY BOLTING, DISINFECTION, TESTING, DEMOLITION AND DISPOSAL, PAVING REMOVAL, TRENCHING, INSTALLATION, BACKFILL, PAVING AND IMPROVEMENTS RESTORATION, AND ALL APPURTENANCES COMPLETE IN PLACE OPERATIONAL AND ACCEPTABLE TO THE CITY AND THE COUNTY FIRE DEPARTMENT. NEW, RELOCATED OR RECONDITIONED HYDRANTS WHERE PAINTING SYSTEM NOT SPECIFIED SHALL BE PAINTED WITH TWO COATS OF ZINC CHROMATE PRIMER AND TWO COATS OF INDUSTRIAL SEVERE SERVICE ENAMEL IN SCHOOL BUS / CAUTION YELLOW PER CITY AND WATER DEPARTMENT STANDARDS. RELOCATED HYDRANTS SHALL BE RECONDITIONED TO A NEW CONDITION. FITTINGS AND VALVES SHALL NOT BE REUSED. BACKFILL ABOVE PIPE ZONE TO BASE OF IMPROVEMENT SHALL BE SLURRY.

15. CONTRACTOR SHALL PROVIDE ALL NECESSARY ASSISTANCE, MATERIALS AND EQUIPMENT FOR ANY FIRE DEPARTMENT REQUIRED PROOF TESTING. HYDRANT FAILING TO MEET THE FIRE DEPARTMENT STANDARDS OR TESTING SHALL BE CORRECTED OR REPLACED AND RETESTED TO FIRE DEPARTMENT SATISFACTION.

16. TEE CUT REQUIRED FOR ASPHALT CONCRETE PAVING REPAIR AT ALL TRENCH AND EXCAVATION IN PAVED AREAS. ALL EDGES SHALL BE SAWCUT TO RECTANGULAR PATTERN AFTER TRENCH IS BACKFILLED AND BEFORE ASPHALT REPAIR. PRIME ALL CONTACT AREAS. IF TRENCH EDGE IS WITHIN FOUR FEET OF GUTTER OR CURB CONTINUE THE 2 INCH GRIND TO EDGE OF PAVEMENT, OR REMOVE AND REPLACE PAVING FROM TRENCH TO GUTTER. REPLACEMENT AC SHALL BE OF MINIMUM THICKNESS SHOWN AND 1 INCH GREATER IN THICKNESS THAN THE EXISTING SECTION. ASPHALT REMOVED SHALL BE DISPOSED OFFSITE AND MAY NOT BE USED IN BACKFILL.

17. TRENCH CUT IN EXISTING PCC STREET OR ALLEY SHALL BE SAWCUT BEFORE REMOVAL OF ROADWAY SURFACE. CONCRETE SHALL BE LEGALLY DISPOSED OF OFFSITE AND MAY NOT BE USED IN BACKFILL. PCC SHALL BE SAWCUT TO PROVIDE STRAIGHT RECTANGULAR JOINTS. BASE MATERIAL REMOVED SHALL BE REPLACED WITH CONCRETE. NEW CONCRETE ROADWAY MINIMUM 1" GREATER IN THICKNESS THAN THE EXISTING SECTION AND A MINIMUM 6" THICKNESS SHALL BE CONSTRUCTED WITHIN THESE LIMITS. EXPANSION JOINTS SHALL BE PLACED AT A MAXIMUM SPACING OF 30 FEET. CONCRETE SHALL BE 520-A-2500 MINIMUM.

18. REMOVE EXISTING WATER PIPE, FITTINGS, APPURTENANCES, VALVES AND DISPOSE OFF-SITE. ALL EXCAVATION AND DEMOLITION, REMOVAL TRANSPORT AND DISPOSAL SHALL BE IN ACCORDANCE WITH LEGAL REQUIREMENTS INCLUDING, BUT NOT LIMITED TO SCAQMD, OSHA, CAL-OSHA, HEALTH DEPARTMENT, STATE, FEDERAL AND LOCAL REQUIREMENTS. PIPE REMOVAL INCLUDES ALL APPURTENANCES. REPLACE WITH NEW DUCTILE IRON PIPE, FITTINGS, VALVES, SERVICES, HYDRANTS, APPURTENANCES AND CONNECTIONS OF THE SIZES, TYPES AND CONFIGURATIONS SHOWN AND SPECIFIED. GROUP NEW VALVES AT TEE/ CROSS WHEREVER POSSIBLE.

19. CONTRACTOR TO NOTIFY BUSINESS/ RESIDENCE OCCUPANTS WHOSE WATER SERVICE WILL BE AFFECTED BY THE CONSTRUCTION 72 HOURS PRIOR TO DISCONTINUANCE OF SERVICE, THEN AT 24 HOURS IN ADVANCE OF SHUT OFF AND CHANGE OVER. HIGHLINE SERVICES REQUIRED FOR ALL AFFECTED OCCUPANTS.

20. WHERE STEEL PIPE INSTALLATION IS REQUIRED, IT SHALL BE DOUBLE CEMENT MORTAR LINED (AND EPOXY OR CEMENT MORTAR COATED AS SHOWN OR REQUIRED), WELDED CONNECTIONS AND COMPLETELY PATCHED INSIDE AND OUT PRIOR TO ACCEPTANCE AND BEING PLACED IN SERVICE. PRESSURE TEST AND DISINFECTION REQUIRED PER AWWA.

21. BACKFILL AT WATER MAINS ABOVE PIPE ZONE TO LOWER LIMIT OF PAVING SHALL BE THREE QUARTER SACK SAND CEMENT SLURRY ABOVE PIPE ZONE BEDDING.

22. INSTALLATION OF HDPE PIPE BY DIRECTIONAL DRILLING AT INTERFERING UTILITY CROSSING LOCATIONS MAY BE PERMITTED AS OPTIONAL METHOD SUBJECT TO APPROVAL BY JURISDICTIONAL AUTHORITIES. SUBMITTAL OF METHOD REQUIRED. SDR/DR AS REQUIRED BY ENGINEER.

SEWER CONSTRUCTION GENERAL NOTES

1. SEWER CONSTRUCTION PERMIT SHALL BE OBTAINED AND PUBLIC WORKS CONSTRUCTION INSPECTION SCHEDULED PER CITY REQUIREMENTS. PERMIT FROM OTHER JURISDICTIONS FOR EXCAVATION IN STREETS IS RESPONSIBILITY OF CONTRACTOR.

2. THE CONTRACTOR SHALL PROVIDE SURVEY STAKES ON THE PROPERTY LINE OR PROPERTY LINES PRODUCED AT RIGHT ANGLES TO THE SEWER LINE STATIONED ON THE LINE CONNECTING THE CENTERLINE OF MANHOLES SHOWING LATERALS.

3. VITRIFIED CLAY PIPE JOINTS SHALL BE TYPE "D" OR "G" IN ACCORDANCE WITH SECTION 208-2 OF THE STANDARD SPECIFICATIONS.

4. HOUSE LATERALS TO BE REPLACED SHALL BE CONSTRUCTED TO PROPERTY LINE AND CONNECTED OR CAPPED AS REQUIRED. ALL CONNECTION PER LACSD AND CITY STANDARDS. WYE OR TEE BRANCHES MAY BE USED FOR CONNECTIONS TO MAINLINE SEWERS EXCEPT AS NOTED. FOR POWER POLE WITHIN THREE FEET OF THE SEWER PIPE, THE SEWER SHALL BE ENCASED PER LACDPW STANDARD PLAN 2023-2, CASE II, FOUR FEET EACH WAY FROM LIMITS OF POLE.

5. CONNECTIONS BETWEEN VITRIFIED CLAY AND CAST/DUCTILE IRON PIPES SHALL BE MADE USING RUBBER SLEEVE JOINT, TYPE "D" PER STANDARD SPECIFICATIONS SECTION 208-2. BUSHING INSTALLED IF REQUIRED.

6. SEWER WYE AND LATERAL DETAILS AND STANDARD DETAILS ARE SHOWN OR REFERENCED. NEW LATERAL FROM NEW SEWER TO JOIN PER DETAIL. LATERALS AND WYES TO BE LOCATED AT LEAST FIVE FEET APART AND MINIMUM FIVE FEET FROM ANY MANHOLE IN ACCORDANCE WITH LOS ANGELES COUNTY PUBLIC WORKS AND LACSD STANDARDS.

7. VITRIFIED CLAY PIPE LATERALS OR SEWERS FOUND TO HAVE LESS THAN FOUR FEET OF COVER SHALL BE ENCASED PER LOS ANGELES COUNTY STANDARD PLAN 2023-2, CASE II, AS A PART OF THE SEWER MAIN LINE CONSTRUCTION UNLESS OTHERWISE DIRECTED BY THE ENGINEER.

8. WHERE PVC SEWER IS ALLOWED, PIPE SHALL BE SDR 26 OR HEAVIER AND BE SPECIFICALLY APPROVED FOR SANITARY SEWER SERVICE. DETAILED SUBMITTAL AND APPROVAL, PRIOR TO USE, ARE NECESSARY.

9. FOR SEWER PIPES WITHIN THE VICINITY OF POTABLE WATER PIPES, REFER TO AND COMPLY WITH THE COUNTY DEPARTMENT OF HEALTH, COUNTY PUBLIC WORKS, CA DEPT. OF HEALTH AND THE STANDARD DETAILS HEREIN.

10. MANHOLES PRECAST PER APWA STANDARD PLAN 200-2 OR PER L.A. COUNTY DEPT. OF PUBLIC WORKS STANDARD PLAN 2003-2 EXCEPT AS NOTED OR DETAILED OTHERWISE. MANHOLES AT LACSD CONNECTION POINTS SHALL MEET LACSD REQUIREMENTS.

11. RESURFACE/REPLACE PAVED SURFACES AS SHOWN AND PER STANDARD DETAILS. LOCAL INSPECTION AND JURISDICTIONAL AGENCY INSPECTION REQUIRED. TEE CUT AND ALL REQUIREMENTS FOR JOINING EXISTING SHALL BE ENFORCED. PERMIT FOR WORK IN COUNTY STREETS REQUIRED AT CONTRACTOR'S EXPENSE.

12. BACKFILL IN STREET SHALL BE IN FULL COMPLIANCE WITH THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION SECTION 217-2. EXCEPT AS MODIFIED HEREIN. CERTIFICATION OF THE BACKFILL MATERIALS AND COMPACTION SHALL BE PERFORMED BY AN INDEPENDENT AND CERTIFIED TESTING SERVICE AND LABORATORY ENGAGED BY THE CONTRACTOR, AT CONTRACTOR'S EXPENSE AND APPROVED BY THE CITY AND THE ENGINEER. ALL COMPLIANCE TEST RESULTS SHALL BE SUBMITTED, THREE RING BOUND, TO THE CITY PRIOR TO ACCEPTANCE OF THE PROJECT.

13. BACKFILL OUTSIDE OF PAVED, RIGHT OF WAY, OR IMPROVED AREAS SHALL BE COMPACTED TO 90% OF THE MAXIMUM DENSITY AS DETERMINED BY ASTM SOIL COMPACTION TEST D 1557-78, METHOD "D" UNLESS OTHERWISE SPECIFIED. THE COMPLIANCE TESTING SHALL BE PERFORMED BY A QUALIFIED INDEPENDENT LABORATORY ENGAGED BY THE CONTRACTOR, AT CONTRACTOR'S EXPENSE AND ACCEPTABLE TO THE CITY ENGINEER. ALL TEST RESULTS SHALL BE SUBMITTED TO THE CITY BOUND CHRONOLOGICALLY IN A 3 RING BINDER PRIOR TO PROJECT ACCEPTANCE BY THE CITY.

14. TOP OF MANHOLE TO BE SIX (6") INCHES ABOVE FINISHED GRADE IN ANY UNIMPROVED RIGHT OF WAY.

15. LEAKAGE TESTING TO BE PER SECTION 306-7.8.2.4. OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION UNLESS MORE STRINGENT TESTING IS SPECIFIED OR REQUIRED BY LOCAL REGULATION, LACDPW OR LACSD.

16. COMPLIANCE WITH THE MOST STRINGENT OF LOS ANGELES COUNTY SEWER STANDARDS, STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION OR PLANS AND SPECIFICATIONS IS REQUIRED UNLESS OTHERWISE DIRECTED IN WRITING BY THE ENGINEER.

17. ANY CONNECTION FOR DISPOSAL OF INDUSTRIAL WASTE MUST HAVE BEEN ISSUED A COUNTY SANITATION DISTRICTS PERMIT FOR INDUSTRIAL WASTE DISCHARGE AND A COPY THEREOF MUST BE ON SITE FOR INSPECTION BY LOCAL JURISDICTION.

18. BEFORE CONSTRUCTION OF A CONNECTION TO A COUNTY SANITATION DISTRICT SEWER AND PRIOR TO FINAL ACCEPTANCE OF THE PROJECT THE LOS ANGELES COUNTY SANITATION DISTRICT INSPECTOR SHALL BE NOTIFIED FOR INSPECTION, (TELEPHONE # (310) 638-1161). RECORD OF INSPECTION AND SIGN OFF BY SANITATION DISTRICT IS TO BE SUBMITTED PRIOR TO PROJECT CLOSE OUT.

19. REQUIREMENTS FOR WORKING IN CONFINED SPACES SHALL BE IN ACCORDANCE WITH THE STANDARD SPECIFICATIONS AS AMENDED BY THE SANITATION DISTRICTS AND WITH THE REQUIREMENTS OF Cal/OSHA.

20. SEWER MANHOLES SHALL BE ADJUSTED TO GRADE AS NECESSARY BY THE ADDITION OF PRECAST RINGS OR FORMED CAST IN PLACE CONCRETE AND SHALL BE FINISHED WITH CONCRETE SURFACE TO MATCH EXISTING ASPHALT. FERROUS RAISING RINGS NOT ALLOWED.

21. MANHOLE COVERS SHALL BE PER CITY OR AGENCY STANDARD AND SHALL INCORPORATE THE NAME AND DESIGNATIONS REQUIRED BY THE CITY OR AGENCY.

22. CONTRACTOR TO FIELD LOCATE AND CONNECT ALL EXISTING SEWER LATERALS TO NEW SEWER MAIN LINE. AS A PART OF MAINLINE CONSTRUCTION, CONNECTIONS SHALL BE PER LACSD AND CITY STANDARDS.

23. CONTRACTOR TO PROVIDE A BYPASS OR ALTERNATE METHOD TO MAINTAIN SEWER SERVICEABILITY WHILE CONSTRUCTING NEW SEWER MAIN SEGMENTS IN ACCORDANCE WITH CITY NPDES PERMIT. SUBMIT PROPOSED METHOD FOR REVIEW BY ENGINEER & CITY 72 HOURS PRIOR TO CONSTRUCTION. METHODS TO BE IN ACCORDANCE WITH CITY GENERAL NPDES PERMIT.

24. CONTRACTORS TO NOTIFY BUSINESS/ RESIDENCE OCCUPANTS THAT WILL BE AFFECTED BY THE CONSTRUCTION FOR EACH SEWER SEGMENT 72 HOURS, THEN AT 24 HOURS IN ADVANCE OF INTERRUPTIONS.

NOTES

1. ALL LATERALS SHALL BE CUT BACK A SUFFICIENT DISTANCE TO ALLOW RECONNECTION WITHOUT ADDITIONAL BENDS. IF LATERAL IS DEFICIENT, REMOVE AND REPLACE IT WITH NO ADDITIONAL COST TO THE CITY.
2. CONTRACTOR TO PROVIDE SEWER BYPASS SYSTEM DURING CONSTRUCTION TO KEEP ALL OCCUPANTS IN SERVICE. ANY FLOW BYPASS SYSTEM INVOLVING CSD MANHOLES SHALL BE IN ACCORDANCE WITH SECTION 500-1.1.7 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION AS AMENDED BY CSD.
3. CONTRACTOR TO PROVIDE TEMPORARY WATER SERVICE HIGHLINE TO ALL OCCUPANTS WHERE WATER SERVICE MAY BE INTERRUPTED.
4. FIELD VERIFY LOCATION OF EACH LATERAL AT EACH PROPERTY PRIOR TO BEGINNING CONSTRUCTION.
5. WATER SERVICES REFERENCED FROM WATER METERS.
6. CONTRACTOR MAY ADJUST THE PIPE HORIZONTAL OR VERTICAL ALIGNMENT TO MAINTAIN ADEQUATE SEPARATION BETWEEN WATER AND SEWER LINE WITH NO ADDITIONAL COST TO THE CITY.
7. EXISTING MANHOLE SHALL BE REMOVED AND LEGALLY DISPOSED OF OFFSITE.
8. CONTRACTOR SHALL POTHOLE TO VERIFY LOCATION AND DEPTH OF ALL UTILITY CROSSINGS PRIOR TO PROCUREMENT OF MATERIALS OR COMMENCEMENT OF CONSTRUCTION ACTIVITIES.

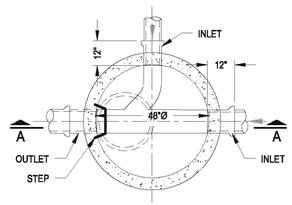
REDUCER RING AND ADJUSTING RINGS

JOINT DETAIL



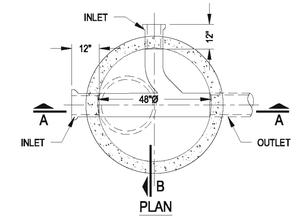
PLAN

NOTES:

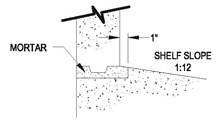
1. SHELF FORMED IN PLACE TO FORM SMOOTH TRANSITION TO ALL CONNECTION SEWERS. SLOPE ALL SHELF SURFACES TO DRAIN.
2. PENETRATIONS INTO MANHOLE SHAFT TO BE MADE BY CORE DRILL.
3. WHERE REQUIRED LINED MANHOLES TO BE PROVIDED/ REPAIRED PER STANDARDS FOR LINING (PVC OR EPOXY).
4. INSTALL TEMPORARY HALF CIRCLE PLYWOOD COVERS TO FIT MANHOLE ID TO PREVENT DEBRIS ENTRY INTO SEWER PIPES, FAILURE TO PREVENT DEBRIS ENTRY REQUIRES CLEANING OF AFFECTED REACHES AT CONTRACTORS EXPENSE
5. EXISTING PIPES TO BE SUPPORTED DURING MANHOLE BASE CONSTRUCTION
6. STEPS PER SPPWC 636 (NOTE 2, STANDARD PLAN 200-3) STAINLESS OR PLASTIC COATED STEEL APPROVAL SUBMITTAL REQUIRED.
7. PRECAST BASES REQUIRE APPROVAL OF ENGINEER AND/ OR DEPARTMENT OF PUBLIC WORKS.
8. MANHOLE COVER CENTERED OVER PRIMARY OUTLET.
9. CONCRETE FOR ALL PRECAST UNITS SHALL BE COMPACTLY VIBRATED IN THE FORMS. IT SHALL BE CURED ACCORDING TO THE APPROVED PRACTICE (STEAM, SPRINKLING, MEMBRANE SOLUTION, OR A COMBINATIONS OF THOSE) MINIMUM 28 DAYS STRENGTH SHALL BE 3500 PSI.
10. STEPS SHALL BE INSTALLED ON TOP OF OUTLET PIPE AS SHOWN ON DETAIL 1.

✱ . FOR CONNECTION TO EXISTING SEWER LINE, CUT EXISTING LINE AND JOIN TO INLET STUB BY STAINLESS STEEL REPAIR CLAMP STYLE LSS1 OR LSS2 BY ROMAC OR EQUAL.

1 DS-1 PRECAST CONCRETE SEWER MANHOLE
NOT TO SCALE



PLAN



SECTION B

NOTES:

1. SHELF FORMED IN PLACE TO PROVIDE SMOOTH TRANSITION TO ALL CONNECTION SEWERS. SLOPE ALL SHELF SURFACES TO DRAIN.
2. PENETRATIONS INTO MANHOLE SHAFT TO BE MADE BY CORE DRILL.
3. WHERE REQUIRED, LINED MANHOLES TO BE PROVIDED, REPAIRED PER STANDARDS FOR LINING (PVC EPOXY).
4. INSTALL TEMPORARY HALF CIRCLE PLYWOOD COVERS TO FIT MANHOLE ID TO PREVENT DEBRIS ENTRY INTO SEWER PIPES, FAILURE TO PREVENT DEBRIS ENTRY REQUIRES CLEANING OF AFFECTED REACHES AT CONTRACTORS EXPENSE
5. EXISTING PIPES TO BE SUPPORTED DURING MANHOLE BASE CONSTRUCTION
6. PRECAST BASES REQUIRE APPROVAL OF ENGINEER AND DEPARTMENT OF PUBLIC WORKS.
7. STEPS STAINLESS STEEL OR PLASTIC COATED STEEL. APPROVAL SUBMITTAL REQUIRED.
8. CONCRETE FOR ALL PRECAST UNITS SHALL BE COMPACTLY VIBRATED IN THE FORMS. IT SHALL BE CURED ACCORDING TO THE APPROVED PRACTICE (STEAM, SPRINKLING, MEMBRANE SOLUTION, OR A COMBINATIONS OF THOSE) MINIMUM 28 DAYS STRENGTH SHALL BE 3500 PSI.

✱ . FOR CONNECTION TO EXISTING SEWER LINE, CUT EXISTING LINE AND JOIN TO INLET STUB BY STAINLESS STEEL REPAIR CLAMP STYLE LSS1 OR LSS2 BY ROMAC OR EQUAL.

NOTES:

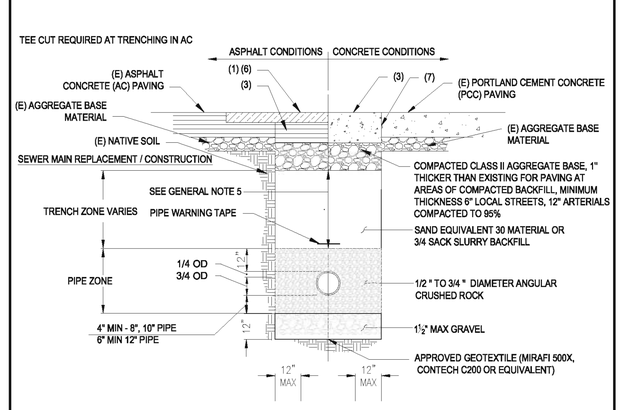
1. 48" STANDARD "A" AND SHALLOW MANHOLES (DETAILS 1, 2, 3) SHALL HAVE 30" COVERS.
2. FOR FRAMES AND COVER IN EASEMENTS, ALLEYS, PARKWAYS, AND UNIMPROVED AREA INSTALL 4 - ½" INSERTS FOR LOCK DOWN STUDS IN TOP GRADE RING ALIGNED WITH FRAME. FRAME BOLTED TO GRADE RING. FINISH ELEVATION AS SHOWN IN SPPWC.
3. INSTALLATION OF GRADE RINGS, SEE DETAIL 1.
4. ADJUST MANHOLE FRAME AND COVER (WITH COLLAR) TO FINAL PAVING GRADE.
5. SHAFT LOCATIONS: CENTERED AT OUTLET SIDE
6. COVER TO BE COATED IN PLACE WITH BITUMINOUS MATERIAL AFTER INSTALLATION.
7. FOR SHORTENED CURE TIME, CONCRETE TO BE 600-C-3000 MIN./ LOW SLUMP.

6 DS-1 TRAFFIC MANHOLE FRAME & COVER
NOT TO SCALE



NOTES:

1. GRIND EXISTING PAVEMENT TO 0.15 FT. DEPTH A MINIMUM OF ONE FOOT BEYOND LIMITS OF TRENCH. (TEE CUT)
2. BEDDING 'A' SHALL BE COMPOSED OF SAND, HAVING A CERTIFIED SAND EQUIVALENT OF NOT LESS THAN 30, CONFORM TO THE SAND GRADATION TABLE HEREIN AND SHALL BE COMPACTED TO 90% OF MAX. DENSITY.
3. REPLACEMENT ASPHALT CONCRETE OR CONCRETE SECTIONS SHALL BE PER CITY OF COMPTON STANDARDS WITH AC OR PCC THICKNESS MINIMUM OF ONE INCH GREATER THAN EXISTING. PCC SHALL BE CLASS 520-C-2500. AC SHALL BE PER BID DOCUMENTS. AC MINIMUM 4" IN LOCAL STREETS, MINIMUM 8" IN ARTERIALS. MINIMUM PCC PAVING 6".
4. BEDDING 'B' SHALL BE COMPOSED OF SAND OR OTHER GRANULAR MATERIAL INSTALLED TO SECTION 306-1.2.1 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION, LATEST EDITION. BEDDING 'B' SHALL BE COMPACTED TO A RELATIVE DENSITY OF NOT LESS THAN 90%.
5. BACKFILL SHALL BE PER SECTION 217 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION, LATEST EDITION. BACKFILL ABOVE PIPE ZONE FOR WATER MAINS SHALL BE ¾ SACK SLURRY.
6. IF TRENCH IS WITHIN 4 FEET OF CURB OR GUTTER, GRIND PAVING 0.15' TO EDGE OF PCC OR REMOVE AND REPLACE AC TO EDGE OF PCC GUTTER/ CURB, AC TO BE REPLACED TO A SMOOTH JOIN WITH EXISTING, MAXIMUM ¼" / 10' DEVIATION FROM TRUE.
7. EXISTING PAVEMENT SHALL BE SAWCUT TO CLEAN STRAIGHT LINES IN A RECTANGULAR PATTERN PRIOR TO REMOVAL. PCC SURFACES TO BE JOINED WITH NEW PCC SHALL BE STRAIGHT AND TRUE AND PREPARED WITH CONCRETE BONDING MATERIAL APPROVED BY THE ENGINEER.

ZONE 'P'	PROHIBITED
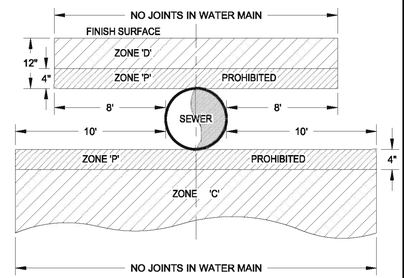
ZONE 'A'	SPECIAL PERMISSION BY HEALTH AGENCY AND WATER DEPT. APPROVAL
ZONE 'B'	PIPE SHALL BE DUCTILE IRON WITH HOT DIP BITUMINOUS COATING OR DIPPED AND WRAPPED ¼" WALL WELDED STEEL, HDPE FUSION JOINT (AWWA C906), OR CLASS 200 PVC (DR 14 PER AWWA C900 AND C905)

NEW WATER MAIN CROSSING SEWER MAIN (CASE 2)

ZONE 'P'	PROHIBITED
ZONE 'C'	NO JOINTS IN WATER MAIN. PIPE DIPPED AND WRAPPED QUARTER WALL WELDED STEEL OR PVC (DR 14 AWWA C900 AND C905) CLASS 200 PRESSURE RATED OR HDPE FUSION JOINT (AWWA C906)
ZONE 'D'	NO JOINTS WITHIN 8FT. OF SIDE OF SEWER AND BE DUCTILE IRON PIPE WITH HOT DIP BITUMINOUS COATING OR DIPPED AND WRAPPED ¼" WALL WELDED STEEL OR PVC (DR 14 AWWA C900 AND C905) CLASS 200 PRESSURE PIPE OR HDPE FUSION WELDED (AWWA C906)

NOTES:

1. THE DETAIL SHOWS CONSTRUCTION REQUIREMENTS FOR REDUCED SEPARATION OF NEW OR EXISTING WATER PIPES FROM NEW OR EXISTING SANITARY SEWERS. SEE DEPARTMENT OF HEALTH SERVICES (DOH'S) RULES FOR ADDITIONAL REQUIREMENTS AND PROXIMITY TO FORCE MAINS
2. SEWER LATERALS CROSSING UNDER WATER MAINS SHALL MAINTAIN 4" CLEARANCE
3. WATER SERVICES CROSSING SEWER MAINS SHALL NOT BE BELOW SEWER MAIN OR LATERAL
4. REFER TO PLANS AND SPECIFICATIONS FOR ADDITIONAL MATERIALS REQUIREMENTS (SOME ALTERNATIVE MATERIALS MAY NOT BE ALLOWED ON THIS PROJECT)
5. NEW WATER MAINS AND SEWERS SHALL BE TESTED WHERE THE PIPES ARE LOCATED TEN FEET PART OR LESS. DO NOT DISTURB EXISTING PIPELINES.
6. ALL WORK SHALL COMPLY WITH CALIFORNIA DEPARTMENT OF HEALTH SERVICES.



CASE 2

THE FOLLOWING TITLE INFORMATION WAS DERIVED FROM A PRELIMINARY TITLE REPORT ISSUED BY FIDELITY NATIONAL TITLE INSURANCE COMPANY, ORDER NO.: 989-30024731-SC4 DATED JANUARY 22, 2019 AT 7:30 A.M.

# DENOTES PLOTTED ITEM.

(2) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:

GRANTED TO:	CITY OF COMPTON, A MUNICIPAL CORPORATION
PURPOSE:	PUBLIC STREET AND INCIDENTAL PURPOSES
RECORDING DATE:	AUGUST 27, 1959
RECORDING NO:	BOOK D585, PAGE 834 OF OFFICIAL RECORDS

LEGAL DESCRIPTION:

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE CITY OF COMPTON IN THE COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

THE NORTHERLY 223.5 FEET OF THE NORTHWEST QUARTER OF THE NORTHWEST QUARTER OF LOT "G" OF THE TEMPLE AND GIBSON TRACT, IN THE CITY OF COMPTON, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 2, PAGE 540 OF MISCELLANEOUS RECORDS IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

EXCEPT THEREFROM THE EASTERLY 70 FEET THEREOF.

ALSO EXCEPT THEREFROM THAT PORTION OF SAID LAND AS DESCRIBED IN THE DEED TO THE CITY OF COMPTON, RECORDED OCTOBER 1, 1948 AS INSTRUMENT NO. 1844, IN BOOK 28405, PAGE 70 OF OFFICIAL RECORDS, AS TO PARCELS 1 AND 2 BELOW:

PARCEL 1:

THAT PORTION OF SAID LOT "G" OF THE TEMPLE AND GIBSON TRACT, IN THE CITY OF COMPTON, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 2, PAGE 540 OF MISCELLANEOUS RECORDS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, DESCRIBED AS FOLLOWS:

BEGINNING AT A POINT IN THE NORTHERLY LINE OF SAID LOT "G" (SAID NORTHERLY LINE BEARS NORTH 89° 58' 40 EAST), DISTANT THEREON 592.62 FEET EASTERLY FROM THE NORTHWESTERLY CORNER OF SAID LOT "G";

THENCE SOUTH 13° 19' 40" EAST, A DISTANCE OF 223.80 FEET;

THENCE SOUTH 89° 38' 40" WEST, A DISTANCE OF 30 FEET:

THENCE NORTH 13° 19' 40" WEST TO THE NORTHERLY LINE OF SAID LOT "G";

THENCE EASTERLY ALONG SAID NORTHERLY LINE OF SAID LOT "G" TO THE POINT OF BEGINNING TO BE KNOWN AS KEMP STREET.

PARCEL 2:

THE WESTERLY 27 FEET OF THE NORTHERLY 223.50 FEET TO THE NORTHWEST QUARTER OF LOT "G" OF TEMPLE AND GIBSON TRACT, IN THE CITY OF COMPTON, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 2, PAGE 540 OF MISCELLANEOUS RECORDS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, TO BE KNOWN AS DWIGHT STREET.

EXCEPT THEREFROM ALL OIL, GAS, MINERAL AND HYDROCARBON SUBSTANCES LYING BEING A DEPTH OF 500 FEET FROM THE SURFACE OF SAID LAND, WITHOUT RIGHT OF SURFACE ENTRY, WHICH RIGHT IS RESERVED IN THE DEED FROM ROBERT L. HOROWITZ AND ELEANOR HOROWITZ, HIS WIFE, CLARENCE K. HOROWITZ AND ROSALIE H. HOROWITZ, HIS WIFE, AND FREDERICK G. HOROWITZ AND BARBARA J. HOROWITZ, HIS WIFE, RECORDED MARCH 3, 1970 AS INSTRUMENT NO. 215 OF OFFICIAL RECORDS.

LACDPW SEWER AREA STUDY GUIDELINES,

SEWER ATLAS MAP

LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
LAND DEVELOPMENT DIVISION

AREA STUDY

An area study must be made for all private contract sewer projects. See attached sample. The area study must include the following items:

1. Area being served - In Acres
2. Determined Tributary area to main line being designed (incl. areas of future devel.)- In Acres
3. Existing and Land Use Zoning
4. Anticipated Sewer Discharge in cfs of total area based on zoning, and/or heavy water users
5. Existing or proposed utilities if in conflict
6. Existing and proposed sewers showing pipe size and grade leading up to the trunk line in order for you to evaluate the impact of your proposed development on the existing system
7. Direction of sewer flow
8. Contour lines
9. Scale not to be less than 1"=600'
10. North arrow pointing up or to the left

ZONING COEFFICIENTS

ZONE	COEFFICIENT (cfs/Acre)
Agriculture	0.001
Residential	
R-1	0.004
R-2	0.008
R-3	0.012
R-4	0.016 *
Commerical	
C-1 through C-4	0.015 *
Heavy Industrial	
M-1 through M-4	0.021 *

* Individual building, commercial or industrial plant capacities shall be the determining factor when they exceed the coefficients shown.

The coefficient to be used for any zoned areas not listed will be determined by the County based upon the intended development and use.

The County shall determine which of the coefficients or combination of coefficients shall be used for design as determined by the established or proposed zoning in the study area. Any modifications to these coefficients due to topography, development, or hazard areas, shall be approved by the Department of Public Works.

Estimated Average Daily Sewage Flows for Various Occupancies

Occupancy	Abbreviation	*Average daily flow	
Apartment Buildings:			
Bachelor or Single dwelling units	Apt	100	gal/D.U. → 150
1 bedroom dwelling units	Apt	150	gal/D.U. → 200
2 bedroom dwelling units	Apt	200	gal/D.U. → 250
3 bedroom or more dwelling units	Apt	250	gal/D.U. → use 300 GPD per SMD
Auditoriums, churches, etc.	Aud	5	gal/seat
Automobile parking	P	25	gal/1000 sq ft gross floor area
Bars, cocktails lounges, etc.	Bar	20	gal/seat
Commercial Shops & Stores	CS	100	gal/1000 sq ft gross floor area
Hospitals (surgical)	HS	500	gal/bed
Hospitals (convalescent)	HC	85	gal/bed
Hotels	H	150	gal/room
Medical Buildings	MB	300	gal/1000 sq ft gross floor area
Motels	M	150	gal/unit
Office Buildings	Off	200	gal/1000 sq ft gross floor area
Restaurants, cafeterias, etc.	R	50	gal/seat
Schools:			
Elementary or Jr. High	S	10	gal/student
High Schools	HS	15	gal/student
Universities or Colleges	U	20	gal/student
College Dormitories	CD	85	gal/student

*Multiply the average daily flow by 2.5 to obtain the peak flow

GRACE ROBINSON HYDE
Chief Engineer and General Manager

April 5, 2019

Ref. Doc. No.: 4998396

Ms. Caitlin Espinoza
Project Coordinator
C & V Consulting, Inc.
6 Orchard, Suite 200
Lake Forrest, CA 92630

Dear Ms. Espinoza:

Will Serve Letter for 930 West Compton Boulevard Residential Project

The Sanitation Districts of Los Angeles County (Districts) received your will serve letter request for the subject project on March 21, 2019. The proposed project is located within the jurisdictional boundaries of District No. 1. We offer the following comments regarding sewerage service:

1. The wastewater flow originating from the proposed project will discharge to a local sewer line, which is not maintained by the Districts, for conveyance to the Districts' Joint Outfall G Unit 5 Trunk Sewer, located along the west side of Compton Creek at Compton Boulevard. The Districts' 31.3-inch diameter lined trunk sewer has a capacity of 7.9 million gallons per day (mgd) and conveyed a peak flow of 5.8 mgd when last measured in 2013.

2. The wastewater generated by the proposed project will be treated at the Joint Water Pollution Control Plant located in the City of Carson, which has a capacity of 400 mgd and currently produces an average flow of 261.1 mgd.

3. The expected average wastewater flow from the project, described in the conceptual site plan as 24 homes, is 6,240 gallons per day. For a copy of the Districts' average wastewater generation factors, go to www.lacsd.org, Wastewater & Sewer Systems, click on Will Serve Program, and click on the Table 1, Loadings for Each Class of Land Use link.

4. The Districts are empowered by the California Health and Safety Code to charge a fee for the privilege of connecting (directly or indirectly) to the Districts' Sewerage System for increasing the strength or quantity of wastewater discharged from connected facilities. This connection fee is a capital facilities fee that is imposed in an amount sufficient to construct an incremental expansion of the Sewerage System to accommodate the proposed project. Payment of a connection fee will be required before a permit to connect to the sewer is issued. For more information and a copy of the Connection Fee Information Sheet, go to www.lacsd.org, Wastewater & Sewer Systems, click on Will Serve Program, and search for the appropriate link. In determining the impact to the Sewerage System and applicable connection fees, the Districts' Chief Engineer and General Manager will determine the user category (e.g. Condominium, Single

Family home, etc.) that best represents the actual or anticipated use of the parcel or facilities on the parcel. For more specific information regarding the connection fee application procedure and fees, please contact the Connection Fee Counter at (562) 908-4288, extension 2727.

5. In order for the Districts to conform to the requirements of the Federal Clean Air Act (CAA), the capacities of the Districts' wastewater treatment facilities are based on the regional growth forecast adopted by the Southern California Association of Governments (SCAG). Specific policies included in the development of the SCAG regional growth forecast are incorporated into clean air plans, which are prepared by the South Coast and Antelope Valley Air Quality Management Districts in order to improve air quality in the South Coast and Mojave Desert Air Basins as mandated by the CCA. All expansions of Districts' facilities must be sized and service phased in a manner that will be consistent with the SCAG regional growth forecast for the counties of Los Angeles, Orange, San Bernardino, Riverside, Ventura, and Imperial. The available capacity of the Districts' treatment facilities will, therefore, be limited to levels associated with the approved growth identified by SCAG. As such, this letter does not constitute a guarantee of wastewater service, but is to advise you that the Districts intend to provide this service up to the levels that are legally permitted and to inform you of the currently existing capacity and any proposed expansion of the Districts' facilities.

If you have any questions, please contact the undersigned at (562) 908-4288, extension 2717.

Very truly yours,

for:

Adriana Raza
Customer Service Specialist
Facilities Planning Department

CITY OF COMPTON ZONING MAP

ZONING
THE USE AND REGULATION OF LAND

All land in the City is divided into zones which regulate, through the Zoning Ordinance of the Compton Municipal Code, how a piece of property can be used and physically developed. These zones are designed to promote orderly development, allowing similar uses to coexist while separating incompatible uses.

1. Automatically Permitted Uses

Uses which require no special permits provided that the physical development of the site meets Municipal Code guidelines. Normal permits such as certificates of occupancy, business licenses, building permits, etc., are still required.

2. Conditionally Permitted Uses

Uses which require a special permit, called a "Conditional Use Permit", in addition to all normal permits. Some uses may be "conditionally" permitted in one zone and "automatically" permitted in another zone. Other uses require a Conditional Use Permit no matter where they are located.

The Zoning Ordinance also prohibits certain uses, either in one or more zones or Citywide. If a use is not listed as "automatically" or "conditionally permitted" in the zone or "conditionally permitted" Citywide it is prohibited.

The physical development of land (setbacks, parking, signs, fences, etc.) is also regulated by the Zoning Ordinance. Proposed development must conform to both the usage and the development requirements for the specific zone.

Zoning within the City of Compton is divided into the following designations:

The "R-A" (Residential Agriculture) Zone, which provides for one-family homes on 10,000 square foot or larger lots and certain agricultural uses.

The "R-L" (Low-Density Residential) Zone, which provides for one-family homes on 5,000 square foot or larger lots.

The "R-M" (Medium-Density Residential) Zone, which provides for one dwelling unit per 2,500 square feet on 5,000 square-foot or larger lots. More than four dwelling units require a Conditional Use Permit.

The "R-H" (High-Density Residential) Zone, which provides for one dwelling unit per 1,250 square feet on 5,000 square foot or larger lots. More than four dwelling units require a Conditional Use Permit.

INTRODUCTION

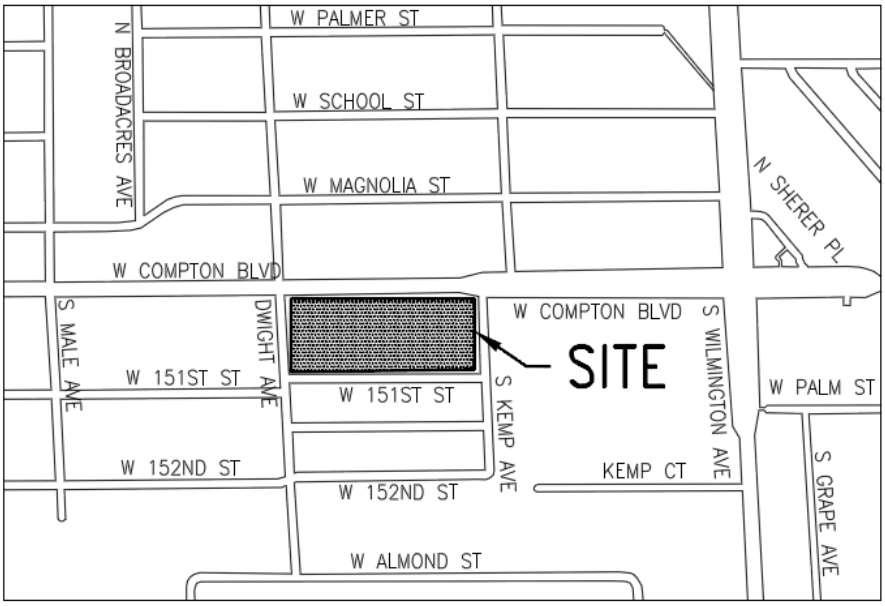
The following Area Study has been prepared by C&V Consulting, Inc. to determine and show:

- ***A.*** The capacity of the existing sewer segments from proposed development site to the Los Angeles County Sanitation District (LACSD) maintained trunk sewers.
- ***B.*** The existing sewer facility will adequately service the proposed development.

This analysis will include any and all tributary flow to the sewer system from the proposed development to the LACSD trunk line downstream of the proposed development. All tributary area within this area study has been developed.

SITE DESCRIPTION

The project is located at 930 West Compton Boulevard, in the City of Compton, California. The site is bounded by West Compton Boulevard to the north, West 151st Street and existing single-family residential to the south, South Kemp Avenue and existing single-family residential to the east, and Dwight Avenue and a liquor store to the west. The project site is currently vacant with no visible traces of impervious coverage. Thus, pervious coverage is assumed to be 100% for the existing condition of the site.



VICINITY MAP
N.T.S.

PROJECT DESCRIPTION

The project proposes the construction of eight condominium buildings of sixty (60) attached units with private garages, private drive aisles, hardscape, associated landscaping, and guest parking areas. The private drive aisle provides access to the residences via two driveway entrances/exits along West 151st Street. Drive aisles and parking areas will be composed of asphalt concrete pavement, and landscaping will be incorporated in open space areas. The proposed project is located within the jurisdictional boundaries of Los Angeles County Sanitation District No. 1. The proposed sewer system will be gravity fed and flow will be towards a local sewer line located along West Compton Boulevard, which conveys and connects to the Districts' Joint Outfall G Unit 5 Trunk Sewer.

AP Number	Size (ac)
6161-001-902	2.75

METHODOLOGY

This study will investigate the sewerage discharge route along West Compton Boulevard from the proposed development (TTM No. 82807) to the Districts' Joint Outfall G Unit 5 Trunk Sewer. The route is on a local sewer line, which is not maintained by the Sanitation Districts of Los Angeles County, connects to the Districts' Joint Outfall G Unit 5 Trunk Sewer for conveyance, located along the west side of Compton Creek at Compton Boulevard. The Districts' 31.3-inch diameter lined trunk sewer has a capacity of 7.9 million gallons per day (mgd) and conveyed a peak flow of 5.8 mgd when last measured in 2013. The subject route of the sewer main will be analyzed by segments based on sewer pipe size, slope, and tributary area.

Reach #1A segment is along West Compton Boulevard to Kemp Avenue, from the connection of the project site Manhole 2 to Manhole 3 and consisting of an existing 12" VCP sewer main with a slope of 0.72%. This segment includes the project site (Area #1A) and the upstream tributary areas of Reach #1.

Reach #2A segment is along West Compton Boulevard from Kemp Avenue to North Wilmington Avenue, Manhole 3 to Manhole 4 and consists of an existing 12" VCP sewer main with a slope of 0.92%. This segment includes Area #2 and the upstream tributary areas of Reach #1A.

Reach #2B segment is along West Compton Boulevard from Kemp Avenue to North Wilmington Avenue, Manhole 4 to Manhole 5 and consists of an existing 12" VCP sewer main with a slope of 0.92%. This segment includes tributary areas of Reach #2A.

Reach #3A segment is on the cross-section of West Compton Boulevard and North Wilmington Avenue, Manhole 5 to Manhole 6 and consists of an existing 12" VCP sewer main with a slope of 0.92%. This segment includes Area #3 and the upstream tributary areas of Reach #2B.

Reach #4A segment is along West Compton Boulevard from Manhole 6 to Manhole 7 and consists of an existing 15" VCP sewer main with a slope of 0.33%. This segment has a lateral connection to a sewer system to the North which also connects to CSD Manhole (G61). This lateral connection is plugged and abandoned as shown on Reference Sheet C-7. This indicates that the flow in the north sewer line conveys into the project sewer line in this study; therefore, the segment includes the upstream Area #4 and the upstream tributary areas of Reach #3A.

Reach #4B segment is along West Compton Boulevard from Manhole 7 to Manhole 8 and consists of an existing 15" VCP sewer main with a slope of 0.33%. This segment includes the upstream tributary areas of Reach #4A.

Reach #5 segment is along West Compton Boulevard to Coral Street and connects to the 31.3" Sewer Trunk Line belonging to Sanitation District No. 1 from Manhole 8 to CSD Manhole (G61) consisting of a 15" VCP sewer main with a slope of 0.33%. This Reach#5 segment includes Area #5 and the tributary area of Reach 4B.

SEWER PIPE CAPACITY ANALYSIS

The existing sewer pipes were analyzed per County Standard S-C4 for a maximum design depth at half full for pipes less than 15" and three fourths full for pipes 15" and greater. Data were obtained from corresponding Sewer As-Built plans and Compton sewer atlas map in Appendix C for the analysis.

In order to calculate the pipe capacity, Kutter's formula was utilized assuming a depth of three-fourths full and a Manning's friction factor, n, of 0.013. Kutter's formula is shown below:

$$Q = Ac\sqrt{RS}$$

Where A = Flow area (sf)
R = Hydraulic Radius (ft)
S = Pipe slope (ft/ft)

$$c = \frac{41.685+\frac{0.00281}{S}+\frac{1.811}{n}}{1+\frac{\left(41.65+\frac{0.00281}{S}\right)n}{\sqrt{R}}}$$

Detailed results for each segment have been tabulated in Appendix B. Details of calculations for each reach of pipe has been included in Appendix B following the table.

The tributary sewer flow rate (Q) for the studied sewer lines are analyzed based on County standards as follows:

For Tributary Areas:
Q = Z*A
A = Tributary Area (Acre)
Z = Zoning Coefficients (Refer to the LACDPW guideline information within Appendix E)

For the Project Site
Q = (0.001 cfs/unit) x (60 units) = 0.060 cfs
(0.001 cfs/unit for proposed condominiums per County standard zoning coefficient within Appendix E)

The tributary areas were calculated by reference scaling the County of Los Angeles Sewer Maintenance Division's Atlas Index Maps and referencing County of Los Angeles Assessor's map. The zoning coefficients were referencing the LACDPW guidelines and the Zoning Map provided by the City of Compton in Appendix G. City of Compton's classification of Low-Density Residential matches the density description

of Los Angeles County Zone R-2, so the zoning coefficient of R-2 is used for Compton's zoning area of Low-Density Residential. Medium-Density Residential applies County R-3 coefficient value and High-Density Residential applies County R-4 coefficient value. These values match the capacity/density represent a more conservative scenario.

Per County requirements, we separately calculated the sewer discharge for schools based on the "Estimated Average Daily Sewage Flows for Various Occupancies" with a peaking factor of 2.5. Churches were taken into consideration of separate calculation, but the discharge calculated was insignificant compared to the zoning coefficient; therefore, the calculation for churches was analyzed by tributary area and corresponding zone. Unit counts were used to determine the flows on condominium sites where its unit density is greater than the tributary area and corresponding zone. The County Sewer Area Study guidelines indicate a zoning coefficient for R-1 Residential as 0.004 cfs/acre which allow up to 4 dwelling units per acre and matches the actual worse case density; For condominium, County recommends applying coefficient of 0.001 cfs/unit.

CONCLUSION

The existing sewer system being analyzed in this area study has a design capacity above the calculated cumulative flow. The peak discharge at the downstream end of the sewer system 15" pipe entering the County Sanitation District No. 1 existing 31.3" sewer trunk main is calculated to be a rate of 1.8465 cfs with a flow depth of 7.61 inches. Refer to Appendix B for calculations and tabulated results. Therefore, we conclude that the existing sewer system has adequate capacity for the proposed development.

UNDERGROUND SERVICE ALERT OF SOUTHERN CALIFORNIA

ATTENTION IS DIRECTED TO THE POSSIBLE EXISTENCE OF UNDERGROUND FACILITIES NOT KNOWN OR IN A LOCATION DIFFERENT FROM THAT WHICH IS SHOWN ON THE PLANS OR IN THE SPECIAL PROVISIONS. THE CONTRACTOR SHALL TAKE STEPS TO ASCERTAIN THE EXACT LOCATION OF ALL UNDERGROUND FACILITIES PRIOR TO DOING WORK THAT MAY DAMAGE SUCH FACILITIES OR INTERFERE WITH THEIR SERVICE.

BEFORE EXCAVATING, THE CONTRACTOR SHALL VERIFY THE LOCATION OF UNDERGROUND UTILITIES BY CONTACTING UNDERGROUND SERVICE ALERT AT 1 (800) 227-2600.

COUNTY SANITATION DISTRICT (CSD) NOTES:

1. NO CONNECTION FOR DISPOSAL OF INDUSTRIAL WASTES SHALL BE MADE TO SEWERS SHOWN ON THESE DRAWINGS UNTIL A PERMIT FOR INDUSTRIAL WASTEWATER DISCHARGE HAS BEEN ISSUED BY CSD FOR SAID CONNECTION.

2. BEFORE BREAKING INTO A CSD SEWER OR MANHOLE, AND PRIOR TO FINAL ACCEPTANCE OF THE PROJECT, A CSD INSPECTOR SHALL BE NOTIFIED BY TELEPHONE AT (310) 638-1161 SO THAT REQUIRED INSPECTION CAN BE MADE.

3. CONSTRUCTION OR ABANDONMENT OF CSD SEWERS OR MANHOLES SHALL BE IN ACCORDANCE WITH THE LATEST EDITION OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION, AND CSD'S LATEST AMENDMENTS TO THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION AND STANDARD DRAWINGS FOR CONSTRUCTION. A COPY OF THE AMENDMENTS AND STANDARD DRAWINGS MAY BE OBTAINED AT THE PUBLIC COUNTER (ROOM 110) LOCATED AT CSD'S JOINT ADMINISTRATION OFFICE, 1955 WORKMAN MILL ROAD, WHITTIER, CA 90601.

LACFCD / LACPDW NOTES:

CROSSINGS AT LOS ANGELES COUNTY STORM DRAIN & SEWER FACILITIES

1. THE CONTRACTOR SHALL NOTIFY THE LOS ANGELES COUNTY DEPARTMENT OF PUBLIC WORKS THAT THE WORK INCLUDES A PIPELINE REPLACEMENT OR NEW PIPE LINE CROSSING ABOVE THE EXISTING STORM DRAIN OR COUNTY SEWER. PERMIT, IF REQUIRED, SHALL BE OBTAINED BY THE CONTRACTOR FOR THE CROSSING. WORK SHALL PROCEED ONLY ON COMPLIANCE WITH ALL REQUIREMENTS OF THE COUNTY DPW. CONTACT INFORMATION: LOS ANGELES COUNTY DEPARTMENT OF PUBLIC WORKS, 900 SOUTH FREMONT AVE., ALHAMBRA, CA 91803, TELEPHONE (626) 458 3129 (SEE LACDPW WEBSITE FOR ADDITIONAL INFORMATION).

2. IF LOS ANGELES COUNTY FLOOD CONTROL DISTRICT AND SEWER MAINTENANCE MANHOLES REQUIRE ADJUSTMENT, CONTRACTOR IS REQUIRED TO FOLLOW THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION ("GREENBOOK"), 2006 EDITION, SUBSECTION 302-5.8, PERTAINING TO ADJUSTMENTS OF MANHOLES AND OTHER STRUCTURES. IN ADDITION, A CONSTRUCTION PERMIT IS REQUIRED.

UTILITY AGENCY NOTES:

SHELL PIPELINE CO:
48 HOURS PRIOR TO COMMENCEMENT OF CONSTRUCTION ACTIVITIES, CONTACT RICH WALCK (310) 816-2067 TO ARRANGE FOR FIELD MARKINGS OF SHELL'S FACILITIES. THIS NOTIFICATION IS IN ADDITION TO TO NOTIFICATION THROUGH UNDERGROUND SERVICE ALERT. CONTRACTOR SHALL NOT PAVE OVER ANY SHELL SURFACE EQUIPMENT.

THE GAS COMPANY:
INFORM GAS COMPANY (OFFICE OF DALE GRABOYES, (310) 687-2013) OF CONSTRUCTION SCHEDULING AND ON SITE MEETINGS. GAS MAINS AND CROSSING LOCATIONS ARE BASED ON AS-BUILT INFORMATION PROVIDED BY SOUTHERN CALIFORNIA GAS COMPANY. THE MAIN LOCATIONS ARE APPROXIMATE ONLY AND DEPTHS OF THE MAINS VARY. ACTUAL LOCATION AND DEPTHS WILL NEED TO BE VERIFIED BY POT HOLING. ADDITIONALLY, THERE MAY BE SERVICE LATERALS FROM THE MAINS THAT ARE NOT IDENTIFIED.

AT&T CALIFORNIA (SBC-PACBELL):
CONTACT THE OFFICE OF TROY STANARD AT (310) 515-2418 AT LEAST 2 DAYS PRIOR START OF WORK. UNDERGROUND TELECOM DUCTS AND CROSSING LOCATIONS ARE BASED ON AS-BUILT INFORMATION PROVIDED BY AT&T CALIFORNIA. THE LOCATIONS ARE APPROXIMATE ONLY AND SIZES AND DEPTHS VARY. ACTUAL LOCATIONS AND DEPTHS WILL NEED TO BE VERIFIED BY POTHOLING. ADDITIONALLY, THERE MAY BE SERVICE CROSSINGS THAT ARE NOT IDENTIFIED.

PARK WATER:
CONTACT THE OFFICE OF MIKE ADAMS AT (562) 923-0711 X 1248 AT LEAST 2 DAYS PRIOR START OF WORK IN THE VICINITY OF PARK WATER . COORDINATE WITH PARK WATER STAFF DURING CONSTRUCTION.

CITY OF COMPTON MUNICIPAL WATER DEPARTMENT:
48 HOURS PRIOR TO COMMENCEMENT OF CONSTRUCTION OF ACTIVITIES NOTIFY COMPTON WATER DEPARTMENT (310) 605-5524.

GOLDEN STATE WATER:
CONTACT THE OFFICE OF MIKE THOMPSON AT (310) 767-8210 AT LEAST 48 HOURS PRIOR START OF WORK IN THE VICINITY OF GOLDEN STATE WATER . COORDINATE WITH GOLDEN STATE STAFF DURING CONSTRUCTION.

NOTE:

1. CITY OF COMPTON "SEWER SPILL PREVENTION PLAN" SHALL BE IMPLEMENTED DURING PROJECT WORK. CONTRACTOR SHALL SUBMIT BYPASS PLAN FOR SEWER SYSTEM DURING CONSTRUCTION IN COMPLIANCE THEREOF.

NOTICE TO CONTRACTOR:

CAUTION: THE ENGINEER PREPARING THESE PLANS WILL NOT BE RESPONSIBLE FOR, OR LIABLE FOR, UNAUTHORIZED CHANGES TO, OR USES OF THESE PLANS. ALL CHANGES TO THE PLANS MUST BE IN WRITING, AND MUST BE APPROVED BY THE PREPARER OF THESE PLANS.

THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITY FACILITIES SHOWN ON THESE PLANS WERE OBTAINED BY A SEARCH OF AVAILABLE RECORDS. THE LOCATIONS SHOWN ARE APPROXIMATE AND SHALL BE CONFIRMED IN THE FIELD BY THE CONTRACTOR. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAKING ANY NECESSARY ADJUSTMENTS TO ALIGNMENT AND/OR GRADE OF THE PROPOSED IMPROVEMENTS. THE CONTRACTOR IS REQUIRED TO TAKE DUE PRECAUTIONARY MEASURES TO PREVENT DAMAGE TO ANY UTILITY FACILITIES SHOWN AND ANY OTHER FACILITIES NOT SHOWN ON THESE PLANS.

ALL CONTRACTORS AND SUBCONTRACTORS PERFORMING WORK SHOWN ON THESE PLANS AGREE THAT, IN ACCORDANCE WITH GENERALLY ACCEPTED CONSTRUCTION PRACTICES, THEY WILL BE REQUIRED TO ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOB SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THE PROJECT. THIS INCLUDES PROVIDING FOR THE SAFETY OF ALL PERSONS AND PROPERTY AND SHALL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS. THE CONTRACTORS AND SUBCONTRACTORS FURTHER AGREE TO DEFEND, INDEMNIFY AND HOLD HARMLESS THE DESIGN PROFESSIONAL FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT, EXCEPT FOR LIABILITY ARISING FROM THE SOLE NEGLIGENCE OF THE DESIGN PROFESSIONAL.

CONTRACTOR NOTIFICATION:

BY SUBMITTAL OF A BID, THE CONTRACTOR REPRESENTS THAT THE SITES HAVE BEEN THOROUGHLY INVESTIGATED AND THAT ALL CONDITIONS HAVE BEEN ACCOUNTED FOR IN HIS BID. CONTRACTOR UNDERSTANDS THAT NO ADDED COSTS WILL BE ALLOWED FOR FAILURE TO ACCOMMODATE THE EXISTING CONDITIONS.

GENERAL NOTES

1. ALL WORK SHOWN ON THESE PLANS SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION ("GREENBOOK") LATEST EDITION, CALTRANS STANDARD PLANS LATEST EDITION, MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES (MUTCD) LATEST EDITION, MUTCD CALIFORNIA SUPPLEMENT LATEST EDITION, ANY OTHER REFERENCED STANDARDS, CONTRACT DOCUMENTS AND SPECIFICATIONS FOR THIS PROJECT.

2. ALL APPLICABLE ORDINANCES OF THE CITY OF COMPTON SHALL BE COMPLIED WITH.

3. AT THE DIRECTION OF THE ENGINEER, CONTRACTOR SHALL NOTIFY AFFECTED RESIDENTS, BUSINESSES AND AGENCIES 72-HOURS PRIOR TO START OF CONSTRUCTION.

4. CONTRACTOR SHALL HAVE SUFFICIENT MATERIALS ON HAND AT ALL TIMES TO EXPEDITE ANY EMERGENCY REPAIR.

5. THE CONTRACTOR SHALL NOTIFY THE CITY DIRECTOR OF PUBLIC WORKS FORTY-EIGHT HOURS PRIOR TO STARTING WORK, TELEPHONE NUMBER (310) 605-5505.

6. WORK IN PUBLIC STREETS, ONCE BEGUN SHALL BE PROSECUTED TO COMPLETION WITHOUT DELAY SO AS TO PROVIDE MINIMUM INCONVENIENCE TO ADJACENT OWNERS AND TO THE TRAVELING PUBLIC. FAILURE TO COMPLY WITH THIS REQUIREMENT IS A
OF TITLE 16 OF THE COUNTY CODE, HIGHWAY PERMIT CODE.

RSECTING UTILITY INSTALLATIONS WILL BE RELOCATED BY THE CONTRACTOR AFTER REVIEW BY THE AFFECTED UTILITY
?RIOR APPROVAL BY THE CITY ENGINEER.

/ENT OF CONFLICT BETWEEN DETAILS, THE MORE STRINGENT SHALL TAKE PRECEDENCE. THE DECISION OF THE
SHALL BE FINAL.

TRACTOR SHALL COORDINATE ALL REQUIRED SITE INSPECTIONS FROM ALL ENTITIES HAVING JURISDICTION.
ATION IS TO BE MADE SUFFICIENTLY IN ADVANCE OF NEEDED SITE INSPECTION THAT THE PROGRESS OF THE WORK IS
ED NOR THE QUALITY AFFECTED. CONTRACTOR SHALL PAY ALL COSTS OF PERMIT AND SITE REVIEW BY ANY UTILITY OR

GLEN W.C KAU, P.E. LICENSE No. C-56657 1-7-16 DATE

\CTOR SHALL SUBMIT A CONSTRUCTION SCHEDULE AS REQUIRED BY THE SPECIFICATIONS. UNLESS NOTIFIED IN
HE PROPOSED CONSTRUCTION SEQUENCE SHALL BE FOLLOWED. WRITTEN REQUEST FOR APPROVAL IS REQUIRED TO
: SCHEDULE.

\NTRACTOR SHALL VERIFY THAT ALL SETS OF PLANS AND SPECIFICATIONS ARE CURRENT AND APPROVED FOR
:TION.

BUILT SET OF PLANS FOR UPDATING BY REDLINE SHALL BE ON SITE AT ALL TIMES AND BE AVAILABLE TO THE ENGINEER.
. BE USED ONLY AS BUILT UPDATING. VERIFICATION THAT AS BUILT DRAWINGS ARE CURRENT IS A REQUIREMENT FOR PROGRESS PAYMENT REQUEST SUBMITTAL.

13. CONTRACTOR AND ALL SUBCONTRACTORS SHALL POSSESS VALID CONTRACTOR LICENSES AND CURRENT CITY BUSINESS LICENSES. ONSITE VENDORS SHALL ALSO BE IN COMPLIANCE WITH LOCAL BUSINESS LICENSE REQUIREMENTS.

14. THE CONTRACTOR SHALL PROVIDE TEMPORARY FENCE TO SECURE THE WORK AND WORKSITE FROM DAMAGE AND THEFT. CONTRACTOR SHALL REPAIR OR REPLACE ANY LOSS OR DAMAGE INCURRED UNTIL WRITTEN ACCEPTANCE OF THE WORK BY THE CITY.

15. CONTRACTOR IS LIABLE FOR ALL INJURY OR DAMAGE CAUSED BY ANY WORK, STORAGE OF MATERIALS AND EQUIPMENT, AND ANY OTHER ACTIVITY ON THE SITE.

16. THE CONTRACTOR SHALL FULLY ASSUME RESPONSIBILITY FOR ANY DAMAGES TO EXISTING FACILITIES, BUILDINGS, UTILITIES, STRUCTURES, OR OTHER APPURTENANCES DUE TO CONTRACTOR'S, SUBCONTRACTOR'S, VENDORS OR EMPLOYEES WHETHER INTENTIONAL OR ACCIDENTAL.

17. WRITTEN DIMENSIONS TAKE PRECEDENCE OVER SCALED DIMENSIONS AND SHALL BE VERIFIED ON THE JOBSITE AND ANY DISCREPANCY BROUGHT TO THE ATTENTION OF THE ENGINEER FOR REVIEW. WORK AT OR AFFECTED BY ANY CONFLICT SHALL BE HALTED UNTIL A RESOLUTION OR REVISION HAS BEEN DETERMINED.

18. THE CONTRACTORS WORK FORCE SHALL CONSIST OF PERSONS SKILLED IN THE TRADES AND TYPE OF WORK INVOLVED. LESS TRAINED WORKERS SHALL BE CLOSELY SUPERVISED BY SKILLED TRADESMEN.

19. THESE PLANS AND REFERENCES HEREIN ARE HEREBY MADE A PART OF THE SPECIFICATIONS AND CONTRACTUAL AGREEMENT.

20. NO REVISIONS SHALL BE MADE TO THESE PLANS WITHOUT WRITTEN APPROVAL BY THE CITY ENGINEER.

21. THERE SHALL BE NO ABOVE-GROUND OBSTRUCTION IN ANY PORTION OF THE SIDEWALK EXCEPT WHERE THE WIDTH, EXCLUSIVE OF THE TOP OF CURB, IS 6 FT. OR GREATER. A CLEAR WALKING PATH OF AT LEAST FOUR (4) FT. MIN. SHALL BE MAINTAINED AT ALL TIMES.

22. THE CONTRACTOR'S ATTENTION IS DIRECTED TO SECTION 7-10.4.1 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION IN REGARDS TO SAFETY ORDERS AND THE CONTRACTOR SHALL COMPLY IN ALL WAYS WITH THE REQUIREMENTS THEREOF. ALL WORK SHALL BE IN COMPLIANCE WITH THE REQUIREMENTS OF Cal/OSHA.

23. INSPECTION PROVIDED BY THE CITY CAN IN NO WAY BE CONSTRUED AS SAFETY INSPECTION.

24. PRIOR TO STARTING AND/OR DURING ALL WORK. THE CONTRACTOR SHALL FULLY COMPLY WITH THE "CALIFORNIA SAFETY AND HEALTH ACT 1976" INCLUDING ALL REVISIONS AND AMENDMENTS THERETO.

25. THE CONTRACTOR SHALL SUBMIT A TRAFFIC CONTROL PLAN FOR APPROVAL TO THE CITY OF COMPTON PRIOR TO START OF ANY WORK. CONTRACTOR SHALL IMPLEMENT THE APPROVED TRAFFIC CONTROL PLAN TO PROVIDE SAFETY TO THOSE ON THE SITE AND TO THE MOTORING AND PEDESTRIAN PUBLIC.

26. CONTRACTOR SHALL MAINTAIN AND RESTORE ALL TRAFFIC SIGNS ERECT AND IN SAME POSITION AS ORIGINALLY FOUND.

27. NO REPRESENTATIVE OF THE CITY OR ITS AGENCIES WILL SURVEY OR OTHERWISE LAYOUT ANY PORTION OF THE WORK.

28. CONTRACTOR SHALL CONFORM TO THE "MINIMUM PUBLIC SAFETY REQUIREMENTS FOR OPEN EXCAVATIONS" AS SHOWN IN THE LOS ANGELES COUNTY PUBLIC WORKS STANDARD 6008-0.

29. AT JOBSITE, ALL WORK SHALL BE IN COMPLIANCE WITH THE REQUIREMENTS OF Cal/OSHA. ALL REQUIRED JURISDICTIONALLY REQUIRED NOTICES SHALL BE DISPLAYED AT SITE.

30. THE CONTRACTOR'S ATTENTION IS EXPRESSLY DIRECTED TO ALL THE REQUIREMENTS AND PROVISIONS OF THE STATE OF CALIFORNIA SAFETY REGULATIONS. CONFORMANCE THERETO SHALL BE STRICTLY ENFORCED THROUGH THE DURATION OF THE PROJECT.

31. BARRICADES WITH FLASHING LIGHTS ARE TO BE MAINTAINED ON ALL OBSTRUCTIONS WITHIN STREET RIGHTS OF WAY AND PEDESTRIAN OR VEHICLE ACCESSIBLE AREAS AT ALL TIMES DURING THE PROJECT. CONSTRUCTION WARNING SIGNS AND FLAGGERS ARE TO BE IN PLACE DURING ALL TIMES OF WORK.

32. CONTRACTOR SAFETY PROGRAM TO BE IN PLACE AND AVAILABLE FOR EXAMINATION BY THE ENGINEER. IT SHALL BE KEPT AT THE JOBSITE OFFICE OR IN THE VEHICLE OF THE ONSITE SUPERVISION.

33. THE CONTRACTOR SHALL OBTAIN ANY AND ALL REQUIRED PERMITS FOR CONSTRUCTION OF THE PROJECT FROM THE CITY OF COMPTON AND ANY AGENCIES HAVING JURISDICTION, AT CONTRACTOR'S EXPENSE.

34. ALL CONTRACTOR EQUIPMENT SHALL HAVE BEEN INSPECTED AND PERMITTED BY SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT FOR EMISSION COMPLIANCE.

35. PERMIT AND INSPECTIONS FEES ARE THE RESPONSIBILITY OF THE CONTRACTOR UNLESS SPECIFIED TO BE REIMBURSED OR TO BE AT NO COST.

36. CONTRACTOR SHALL COMPLY WITH ALL PROVISIONS AND REQUIREMENTS OF ALL PERMITS PERTAINING TO THE PROJECT. THE REQUIREMENTS THEREIN ARE BY REFERENCE INCLUDED IN THE CONTRACT.

37. SEPARATE PERMIT FOR WORK IN ANY STATE HIGHWAY MUST BE OBTAINED FROM THE STATE OF CALIFORNIA DEPARTMENT OF TRANSPORTATION, 120 SOUTH SPRING STREET, LOS ANGELES CA.

38. CONTRACTOR SHALL COMPLY WITH ALL STORMWATER POLLUTION CONTROL, NPDES AND REGIONAL WATER QUALITY CONTROL BOARD (RWQCB) REQUIREMENTS, INCLUDING BUT NOT LIMITED TO BEST MANAGEMENT PRACTICE (BMPs).

39. THE CONTRACTOR SHALL TAKE ALL NECESSARY AND PROPER PRECAUTIONS TO PROTECT ADJACENT PROPERTIES FROM ALL DAMAGE THAT MAY OCCUR FROM STORM WATER AND/OR DEPOSITION OF DEBRIS FROM ANY AND ALL WORK IN CONNECTION WITH PROJECT CONSTRUCTION.

40. CONTRACTOR SHALL MAINTAIN EXISTING PROJECT AREA DRAINAGE AND SHALL INSTALL ADDITIONAL TEMPORARY DRAINAGE SYSTEMS TO PROTECT THE SITE AND ADJACENT PROPERTIES.

41. CONTRACTOR SHALL KEEP THE SITE CLEAN AND FREE OF RUBBISH. TRASH AND EXCESS MATERIALS SHALL BE DISPOSED OF OFFSITE DAILY.

42. CONTRACTOR SHALL PROVIDE FOR DUST CONTROL AT ALL TIMES TO THE SATISFACTION OF THE CITY ENGINEER AND ANY AGENCY HAVING JURISDICTION, AND SHALL BE IN COMPLIANCE WITH THE SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT (A.Q.M.D.) RULE 403 FOR DUST CONTROL AND MITIGATION.

43. UPON COMPLETION OF THIS PROJECT, THE CONTRACTOR SHALL BE RESPONSIBLE FOR REPAIRING ANY DAMAGE INCURRED DURING THE PROGRESS OF THE PROJECT, WITHOUT REGARD TO FAULT OR CAUSE.

44. CALL UNDERGROUND SERVICE ALERT, 1-800-227-2600 AT LEAST 48 HOURS PRIOR TO ANY EXCAVATION WHICH MAY DAMAGE OR INTERRUPT THE SERVICE OF ANY UNDERGROUND UTILITY.

45. THE CONTRACTOR IS FULLY RESPONSIBLE FOR KNOWING THE LOCATION OF ALL UTILITIES AND SHALL COMPLY WITH ALL UTILITY NOTES ON THE PLANS AND SPECIFICATION. THE CONTRACTOR SHALL FULLY COORDINATE ALL HIS WORK WITH AFFECTED UTILITY COMPANIES AND AGENCIES FOR ALL UTILITIES WHETHER SHOWN ON THESE PLANS OR NOT.

46. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE PROTECTION OF ALL EXISTING UTILITY LINES, VALVES, METERS, ETC. WITHIN THE LIMITS OF WORK WHETHER THEY ARE SHOWN ON THESE PLANS OR NOT.

47. CONTRACTOR SHALL KEEP ALL TRAFFIC SIGNAL LIGHTS IN OPERATION AT STREET INTERSECTIONS AFFECTED BY UTILITY CONSTRUCTION OR PAVING WORK.

48. THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITY PIPES OR STRUCTURES SHOWN ON THESE PLANS IS OBTAINED BY A SEARCH OF AVAILABLE RECORDS. TO THE BEST OF OUR KNOWLEDGE, THERE ARE NO EXISTING UTILITIES EXCEPT AS SHOWN ON THESE PLANS. THE CONTRACTOR IS REQUIRED TO TAKE PRECAUTIONARY MEASURES TO PROTECT THE UTILITY LINES SHOWN AND ANY OTHER LINES NOT OF RECORD OR NOT SHOWN ON THESE PLANS.

49. SOUTHERN CALIFORNIA EDISON CO. SHALL BE NOTIFIED FOR ANY ELECTRICAL MANHOLES, VAULTS, OR PULL BOXES WHICH REQUIRE ADJUSTMENT. ANY POLE RELOCATIONS WILL BE BY THE OWNING UTILITY.

50. POWER POLE PROTECTION SHALL BE IN ACCORDANCE WITH THE REQUIREMENTS OF SOUTHERN CALIFORNIA EDISON CO.

51. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO CONTACT THE OWNER OF ANY GAS FACILITY VALVE COVERS AND COORDINATE THEIR ADJUSTMENT TO GRADE OR OTHER RELOCATION AS REQUIRED.

52. TELEPHONE AND CABLE MANHOLES, VAULTS, BOXES AND APPURTENANCES SHALL BE PROTECTED FROM THE WORK. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO CONTACT THE NECESSARY UTILITY AND COORDINATE ANY WORK WHICH WILL REQUIRE ADJUSTMENT OF COMMUNICATION FACILITIES. ACCESS FACILITIES SHALL BE ADJUSTED TO GRADE IF REQUIRED.

53. APPROVAL OF THESE PLANS BY THE CITY OR THEIR REPRESENTATIVES DOES NOT CONSTITUTE A REPRESENTATION AS TO ACCURACY OF THE LOCATION, EXISTENCE, OR ABSENCE OF ANY UNDERGROUND STRUCTURE OR UTILITY WITHIN THE PROJECT AREA LIMITS.

54. ALL CONSTRUCTION JOINTS FOR P.C.C. CURBS, GUTTERS, AND SIDEWALKS SHALL BE IN ACCORDANCE WITH THE STANDARD SPECIFICATION FOR PUBLIC WORKS CONSTRUCTION ("GREENBOOK" LATEST EDITION).

55. ANY BROKEN CONCRETE CURB AND GUTTER, CONCRETE SIDEWALK, TREE WELLS OR ANY OTHER STRUCTURES SHALL BE REMOVED AND REPLACED BY THE CONTRACTOR PER RECOMMENDATION BY THE CITY PROJECT INSPECTOR WITH NO EXTRA COMPENSATION, THE CONTRACTOR IS RESPONSIBLE TO FIELD CHECK FOR SUCH CONDITIONS PRIOR TO SUBMITTAL OF BID.

56. ALL SIDEWALK, CURB AND GUTTER REPAIRS SHALL JOIN WITH THE EXISTING AT THE NEAREST CONSTRUCTION JOINTS AND BE ADJUSTED TO MATCH WITH THE GRADE OF THE EXISTING CONCRETE STRUCTURES.

57. PREFORMED EXPANSION JOINT MATERIAL SHALL BE PLACED IN GUTTER, SIDEWALK, CURB AND RAMP JOINTS AT UNIFORM INTERVALS NOT TO EXCEED 25 FT., AT THE TOP OF "X" OF DRIVEWAYS, AT THE END OF CURVES, AND HANDICAP RAMPS.

58. HANDICAP RAMPS SHALL BE INSTALLED AT ALL NEW AND REPLACEMENT INTERSECTION SIDEWALK, CURB AND GUTTER INSTALLATIONS. TRUNCATED DOME ADA COMPLIANT DETECTABLE SURFACES SHALL BE INSTALLED, COLOR TO BE SELECTED BY THE CITY.

59. ALL SURFACES TO BE JOINED SHALL BE CLEANED, PREPARED, ABRADED, PRIMED, AND OTHERWISE BE MADE READY FOR JOINING WITH THE NEW CONSTRUCTION.

60. ALL NEW SIDEWALK, CURB, GUTTER, SLABS AND OTHER EXPOSED CONCRETE SURFACES SHALL BE FINISHED TO MATCH THE EXISTING SURFACES. IN THE EVENT THERE ARE DIFFERING ADJACENT SURFACES, THE ENGINEER SHALL SELECT THE SURFACE TO MATCH OR DIRECT THE FINISH TO BE APPLIED TO THE NEW OR REPLACED WORK.

61. ABANDON EXISTING FIRE HYDRANT AS REQUIRED FOR RELOCATION OF NEW FIRE HYDRANT. EXISTING FIRE HYDRANT AND RISER SHALL BE REMOVED AND IMPROVEMENTS RESTORED AS PART OF INSTALLATION OF NEW FIRE HYDRANT ASSEMBLY.

62. AGGREGATE BASE TO BE COMPACTED TO A MINIMUM OF 95%, SUB-BASE TO BE COMPACTED TO A MINIMUM OF 90%. REFERENCE SSPWC SECTIONS 211-1 / 306-1, UNLESS OTHERWISE NOTED.

63. NO FILL TO BE PLACED, UNTIL THE CITY GRADING INSPECTOR HAS INSPECTED AND APPROVED THE UNDISTURBED BOTTOM AND SIDES OF THE EXCAVATION.

64. SANITARY SEWER, WATER, STORM DRAIN, VAULT, AND OTHER MANHOLE FRAME AND COVER ASSEMBLIES SHALL BE RAISED TO NEW GRADE IF DISTURBED. USE OF CAST FERROUS RAISING RINGS IS NOT ACCEPTABLE.

65. COMPLETED ASPHALT PAVING OR REPAIR PAVING SHALL BE COMPACTED BY ACCEPTABLE MEANS TO PROVIDE A SURFACE FREE OF DEPRESSIONS, BUMPS, RIDGES OR OTHER IRREGULARITIES OR OTHER MARKINGS.

66. PAVEMENT MARKINGS SHALL BE REPLACED USING THE CURRENT MARKING METHOD IN USE BY THE CITY FOR NEW INSTALLATIONS. MARKINGS SHALL COMPLY WITH ALL JURISDICTIONAL REQUIREMENTS.

67. ALL CONSTRUCTION STAKING AND RELATED SURVEYS SHALL BE PROVIDED BY THE CONTRACTOR.

68. CONTRACTOR SHALL PROTECT ALL STREET CENTERLINE MONUMENTS AND TIES. ANY CENTERLINE MONUMENTS/TIES DISTURBED DURING THE CONSTRUCTION SHALL BE RESET BY THE CONTRACTOR TO THE SATISFACTION OF THE DIRECTOR OF PUBLIC WORKS AND RECORDED WITH LOS ANGELES COUNTY AT NO COST TO THE CITY.

69. CONTRACTOR SHALL UTILIZE A LICENSED SURVEYOR SERVICE TO INVESTIGATE THE PROJECT AREA, TIE OUT ANY MONUMENT WHICH MAY BE DISTURBED AND TO RESET AND RECORD THE SURVEY WITH THE COUNTY WHERE REQUIRED. LOCATE ALL MONUMENTS AND VERIFY TIE OUTS PRIOR TO BEGINNING CONSTRUCTION.

70. ELEVATIONS ARE IN FEET ABOVE U.S.C. AND G.S. SEA LEVEL, DATUM AS SHOWN, AND REFERENCED LOCAL BENCHMARKS.

71. IN ADDITION TO "AS BUILTS" CONTRACTOR SHALL PROVIDE GRADE SHEETS WITH STATIONING REPRESENTING COMPLETED WORK AS CONSTRUCTED. STATIONING OF ALL CONNECTIONS SHALL BE SHOWN.

72. THE CONTRACTOR ACKNOWLEDGES BY ENTERING INTO THE CONTRACT FOR THE WORK THAT ALL NECESSARY INSPECTIONS AND INVESTIGATIONS WERE UNDERTAKEN PRIOR TO BID AND CONTRACT EXECUTION.

73. SUFFICIENTLY PRIOR TO COMMENCEMENT OF THE WORK, THE CONTRACTOR SHALL INVESTIGATE THE AREA OF THE PROPOSED NEW CONSTRUCTION AND NOTIFY THE ENGINEER OF ANY CONFLICTS WHICH REQUIRE REVISION OF THE WORK. EXTRA WORK INCURRED BY CONFLICTS ENCOUNTERED DURING PERFORMANCE OF THE WORK WHICH SHOULD HAVE BEEN APPARENT TO THE INVESTIGATION WILL NOT JUSTIFY ADDED COSTS.

74. THE CONTRACTOR SHALL REVIEW AND VERIFY CONDITIONS AT THE JOB SITE BEFORE COMMENCING ANY PORTION OF THE WORK. COMPARE ACTUAL CONDITIONS WITH DRAWINGS TO ASCERTAIN CONDITIONS UNDER WHICH WORK IS PERFORMED: CHECK AND CONFIRM LOCATION OF EXISTING STRUCTURES, EQUIPMENT, AND UTILITIES WHICH MAY AFFECT WORK. COMMENCEMENT OF WORK SHALL CONSTITUTE FULL ACCEPTANCE OF THE EXISTING SITE CONDITIONS. THE CONTRACTOR SHALL REPORT ALL DISCREPANCIES TO THE ENGINEER FOR RESOLUTION PRIOR TO COMMENCEMENT OF WORK.

75. ANY PLANTED AREAS DISTURBED BY THE WORK SHALL HAVE ALL ROOTS AND DELETERIOUS MATERIALS REMOVED AND BE REPLANTED INCLUDING NEW TOPSOIL AND ROOT BARRIERS INSTALLED TO PROVIDE A COMPLETE REPLACEMENT OF THE ORIGINAL TO THE SATISFACTION OF THE ENGINEER.

76. ALL TREES TO REMAIN SHALL BE PROTECTED IN PLACE AND BE WATERED AND TRIMMED AS SCHEDULED BY OWNER IF ACCESS IS IMPEDED.

ROADWAY RECONSTRUCTION GENERAL NOTES

1. CURB AND GUTTER TO BE REPLACED TO MATCH EXISTING AND IN ACCORDANCE WITH "GREENBOOK" STANDARDS.

2. JOIN NEW CURB AND GUTTER TO ASPHALT PAVEMENT PER DETAILS SHOWN OR REFERENCED. CONSTRUCT CURB AND GUTTER TYPE A1-6 (150) AND A1-8 (200) PER THE "GREENBOOK" STD PLAN 120-2 AND CITY REQUIREMENTS UNLESS OTHERWISE SHOWN.

3. JOIN NEW ASPHALT PAVING TO CURB AND GUTTER PER DETAILS SHOWN OR REFERENCED. PRIME ALL AREAS TO BE JOINED. SAWCUT ALL CONCRETE AND ASPHALT PAVING TO BE JOINED PRIOR TO DEMOLITION AND REMOVALS.

4. REPLACE ANY DAMAGED ALLEY APPROACH PER DETAIL HEREIN AS SHOWN AND IN ACCORDANCE WITH "GREENBOOK" STANDARDS. CONCRETE TO BE 520-C-2500. MATCH EXISTING CURB AND GUTTER, SIDEWALK AND ALLEY GRADES. DAMAGED AREAS TO BE REPAIRED SHALL BE REMOVED TO THE NEXT SCORE LINE OR JOINT.

5. ANY NEW CURB AND GUTTER CONSTRUCTED AT EXISTING ASPHALT WEARING COURSE SHALL BE JOINED WITH A MINIMUM SIX INCH NOTCH PER STANDARD DETAIL.

6. DRIVEWAY APPROACHES DISTURBED BY THE WORK SHALL BE REPLACED PER DETAILS HEREIN OR GREEN BOOK STANDARDS.

7. REPLACE DISTURBED TRAFFIC LOOPS & DETECTION SYSTEM COMPLETE & OPERATIONAL.

8. COUNTY AND CITY STANDARDS SHALL BE FOLLOWED FOR STENCIL MARKING ALL CATCH BASINS OR STORM DRAIN INLETS WHICH HAVE BEEN INSTALLED OR DISTURBED BY THE CONSTRUCTION.

9. MANHOLE FRAME AND COVERS, UTILITY VAULTS, VALVE BOXES, AND OTHER UTILITY ACCESS STRUCTURES SHALL BE RAISED TO MATCH FINISH SURFACE IN ACCORDANCE WITH STANDARD SPECIFICATIONS, CITY AND COUNTY REQUIREMENTS.

10. BLUE REFLECTORS SHALL BE INSTALLED ON THE ROADWAY SURFACE AT THE REQUIRED LOCATIONS TO INDICATE THE LOCATION OF EACH HYDRANT. REFLECTORS SHALL BE IN ACCORDANCE WITH FIRE DEPARTMENT REGULATIONS.

11. ALL WORK IN COUNTY ROADWAY SHALL BE IN ACCORDANCE WITH LACDPW REQUIREMENTS AND SHALL BE INSPECTED BY LACDPW. CONTRACTOR SHALL APPLY FOR AND OBTAIN COUNTY PERMIT AT CONTRACTOR'S EXPENSE.

12. THE EXISTENCE AND LOCATION OF ANY MANHOLES, UTILITY VAULTS, PULL BOXES, WATER METERS, VALVES AND OTHER UTILITIES ARE OBTAINED THROUGH TOPOGRAPHIC SURVEY AND ARE TO BE PROTECTED WITHIN THE AFFECTED WORK AREA WITHOUT ADDITIONAL COST TO THE OWNER.

13. TRAFFIC STRIPING AND PAVEMENT MARKING SHALL BE THERMOPLASTIC AS SPECIFIED, PER CALTRANS 84 AND PER CITY OF COMPTON REQUIREMENTS.

GENERAL SIGNAGE AND STRIPING NOTES

1. ALL STRIPING AND SIGNAGE REQUIRED TO RESTORE DAMAGE TO EXISTING SHALL BE DONE IN CONFORMANCE WITH THE APPLICABLE CALTRANS STANDARD PLANS AND PROVISIONS OF THE CALTRANS STANDARD SPECIFICATIONS, INCLUDING SECTION 84 AND CITY AND COUNTY STANDARDS AND REQUIREMENTS.

2. COMPLY WITH ALL MARKING REQUIREMENTS OF AGENCY HAVING JURISDICTION. PAVEMENT LEGENDS SHALL CONFORM TO CITY OF COMPTON STENCILS. SIGNS, STRIPES AND PAVEMENT LEGENDS SHALL BE REFLECTORIZED.

3. TRAFFIC STRIPING AND PAVEMENT MARKING SHALL BE THERMOPLASTIC IN ACCORDANCE WITH CALTRANS STANDARD SPECIFICATIONS SECTION 84 AND PROJECT BID DOCUMENTS.

4. STENCILS ARE REQUIRED AT ALL CATCH BASINS. CATCH BASIN MARKINGS MAY BE PAINTED.

5. REPLACE ALL SIGNAGE DAMAGED BY THE WORK IN KIND WITH NEW PER BID DOCUMENTS AND CITY / AGENCY / JURISDICTIONAL REQUIREMENTS.

TRAFFIC CONTROL AND SAFETY

1. THE CONTRACTOR SHALL TAKE ALL PRECAUTIONS NECESSARY, INCLUDING SIGNING, BARRICADES, SITE SECURITY, ACCESS, DETOURS, AND DEDICATED TRAFFIC CONTROL PERSONNEL TO PROTECT THE MOTORING AND PEDESTRIAN PUBLIC AND MAINTAIN ACCESS TO PRIVATE PROPERTY DURING WORKING AND NON-WORKING HOURS.

2. THE CONTRACTOR SHALL PREPARE AND SUBMIT A PROJECT TRAFFIC CONTROL PLAN IN CONFORMANCE WITH THE WATCH MANUAL AND THE SPECIFICATIONS WHICH SHALL BE COORDINATED WITH THE CONSTRUCTION SCHEDULE PRIOR TO CONSTRUCTION, EXCAVATION, PAVING, OR OTHER OPERATIONS THAT WILL DISRUPT TRAFFIC OR ACCESS TO RESIDENCES OR BUSINESSES. PLAN SHALL BE IMPLEMENTED DURING ALL CONSTRUCTION.

3. WHERE PARKING CONTROL IS REQUIRED, APPROVED TEMPORARY DATE LIMITED NO PARKING SIGNS SHALL BE POSTED NO MORE THAN 100 FEET APART AT LEAST 72 HOURS PRIOR TO WORK.

4. DURING PAVING OPERATIONS, THE CONTRACTOR SHALL PROVIDE INDIVIDUALS OR EQUIPMENT DESIGNATED TO PERFORM AND MAINTAIN TRAFFIC CONTROL ONLY.

5. ONE LANE IN EACH DIRECTION SHALL BE MAINTAINED AT ALL TIMES OR FLAGGER CONTROL OF TRAFFIC SHALL BE IMPLEMENTED.

6. EACH EXCAVATION LEFT OVERNIGHT SHALL BE SECURED WITH PLATES PER CALTRANS AND SHALL HAVE MINIMUM 3 FLASHING BARRICADES EACH DIRECTION AT EXCAVATION AT MAXIMUM SPACING OF 20 FEET.

SEQUENCE NOTES

1. A COMPLETE SCHEDULE OF THE WORK SHOWING THE FOLLOWING SEQUENCE SHALL BE PREPARED: VERIFY & TIE OUT MONUMENTS, TRAFFIC CONTROL PLAN PER SPECIAL PROVISIONS, AND MATERIAL SUBMITTALS, SET UP FACILITIES AND LAY DOWN AREA,SURVEY AND STAKING FOR CONSTRUCTION, SAWCUT, PAVING REMOVAL AND DISPOSAL, REMOVAL OF CONCRETE IMPROVEMENTS, TRENCHING AND DISPOSAL OF EXISTING PIPE, STRUCTURES REMOVAL AND DISPOSAL, WATER MAIN CONSTRUCTION, VALVE BOX CONSTRUCTION, SERVICE CONNECTION AND CONSTRUCTION, PIPELINE TESTING, PIPELINE DISINFECTION, BACKFILL AND COMPACTION, PREPARATION OF BASE, PAVEMENT GRIND, PAVING BASE COURSE, PAVING WEAR COURSE, ADJUSTMENT OF VALVE BOXES AND RELATED COVERS/BOXES TO GRADE, RESTORATION OF CONCRETE IMPROVEMENTS, RE-STRIPING, PAVEMENT MARKER REPLACEMENT, PLACEMENT OF SIGNAGE, AS BUILTS, CLEAN UP AND MOVE OFF.

DRAWING No. G-2
SHEET 02 OF 17 SHEETS

Z:\CS PROJECTS\Compton\Sewer CIP 10-18 and CIP 10-21\PLANS\DWG\CIP 10-18 COMPTON AND WILMINGTON SEWER\GS- GENERAL NOTES.dwg 01/04/16 11:04am

WATER MAIN CONSTRUCTION GENERAL NOTES

1. REMOVE AND LEGALLY DISPOSE OF EXISTING ASBESTOS CEMENT PIPE. ALL LEGALLY MANDATED MEASURES SHALL BE TAKEN TO CONTAIN ALL MATERIALS FROM THE ACP. THE PUBLIC SHALL BE ISOLATED FROM ALL DEBRIS FROM THE PIPE OR ADJACENT CONTAMINATED SOILS OR OTHER MATERIALS. ADDITIONAL REQUIREMENTS ARE LISTED IN THE PROJECT SPECIFICATIONS.

2. WATER MAIN PIPE SHALL BE DUCTILE IRON MINIMUM THICKNESS CLASS 52, PRESSURE CLASS 350, DOUBLE CEMENT MORTAR LINED, UNLESS NOTED OTHERWISE.

3. ALL FITTINGS SHALL BE RATED EQUAL TO OR GREATER THAN THE REQUIRED PIPE CLASSIFICATIONS.

4. WHERE DIRECTED, REPLACE IRON RESIDENTIAL AND COMMERCIAL SERVICES SHOWN OR WHICH ARE DISTURBED OR DISCONNECTED BY THE CONSTRUCTION. ALL SERVICES SHALL INCLUDE SERVICE CLAMP, CORPORATION STOP, COPPER TYPE K TUBE, AND CURB STOP. COPPER SHALL BE FIELD BENT PER PLUMBING CODE STANDARDS. IF CONNECTION BETWEEN COPPER PIPES IS REQUIRED, SILVER SOLDER SHALL BE USED. COPPER SERVICES SHALL BE RECONNECTED AS A PART OF WATERMAIN INSTALLATION. COMPRESSION COUPLING OPTIONAL PENDING CITY APPROVAL.

5. WHERE DIRECTED, REMOVE EXISTING METER BOXES AND INSTALL NEW METER BOXES AT ALL NEW OR REPLACED RESIDENTIAL AND COMMERCIAL SERVICE CONNECTION LOCATIONS.

6. ANY SEWER LATERAL DAMAGED BY THE CONSTRUCTION SHALL BE REPLACED FROM SEWER MAIN TO RECONNECT AT SOUND PIPE. AT NO COST TO THE CITY.

7. PROVIDE NEW BLOW OFF ASSEMBLY PER PLAN DETAIL AND SPECIFICATION REQUIREMENTS AT LOCATIONS SHOWN ON THE PLANS WHEN SO DIRECTED BY THE ENGINEER.

8. PROVIDE NEW COMBINATION VACUUM RELIEF / AIR RELEASE VALVE ASSEMBLY PER PLAN DETAIL AND SPECIFICATION REQUIREMENTS AT LOCATIONS SHOWN ON THE PLANS OR AT HIGH POINTS WHEN SO DIRECTED BY THE ENGINEER.

9. ALL NECESSARY TRANSITION FITTINGS SHALL BE PROVIDED AND INSTALLED TO CONNECT THE NEW PIPING, VALVES, AND FITTINGS TO EXISTING PIPING AND APPURTENANCES OF DISSIMILAR MATERIALS AS AN INTEGRAL PART OF THE WORK REQUIRED FOR A COMPLETE AND OPERATIONAL SYSTEM.

10. ALL GATE AND BUTTERFLY VALVES SHALL BE INSTALLED COMPLETE WITH VALVE BOX ASSEMBLIES WITH A CAST COVER MARKED AND PAINTED IN ACCORDANCE WITH COMPTON WATER DEPARTMENT REQUIREMENTS AND PER PLAN DETAIL.

11. CONSTRUCTION PERMIT AND ALL JURISDICTIONAL PERMITS SHALL BE OBTAINED AND PUBLIC WORKS/JURISDICTIONAL CONSTRUCTION INSPECTION SCHEDULED PER CITY AND/OR JURISDICTIONAL REQUIREMENTS AT CONTRACTOR'S EXPENSE.

12. THRUST BLOCKS, PER APPLICABLE PLAN DETAILS, SHALL BE INSTALLED AT ALL CHANGES OF DIRECTION OF THE PIPING (INCLUDING TEES AND PIPE CAPS). ALL THRUST BLOCKS SHALL BEAR UPON UNDISTURBED SOLID SOIL WITH A BEARING AREA PER CHART SHOWN WITH THRUST BLOCK DETAILS. GREASE ALL PIPE AND FITTING CONTACT AREAS. DO NOT COVER ANY PIPE JOINT WITH CONCRETE. UNSUITABLE SOIL SHALL BE REMOVED AND REPLACED WITH ADDITIONAL CONCRETE THRUST BLOCK MATERIAL. SHOULD EXTENSIVE UNSUITABLE SOIL BE ENCOUNTERED, THE WORK SHALL BE SUSPENDED AND THE ENGINEER NOTIFIED. WORK SHALL BE DISCONTINUED IN THE IMMEDIATE AREA UNTIL WRITTEN DETERMINATION MADE. VERTICAL DIRECTION CHANGE OR FITTINGS SHALL BE STRAPPED PER DETAILS.

13. ANY VALVE OR FITTING INSTALLED FOR FUTURE USE SHALL BE PRESSURE CAPPED, PLUGGED, OR BLIND FLANGED TO SECURE THE LINE AND PREVENT LEAKAGE. THRUST BLOCK SHALL BE INSTALLED.

14. ALL FIRE HYDRANT INSTALLATIONS INCLUDE CONNECTION TO THE WATER MAIN, THRUST BLOCKS, CUT IN, NEW TEE, ALL PIPE AND FITTINGS, NEW 6" CUT OFF GATE VALVE, VALVE BOX COMPLETE PER DETAIL INCLUDING CONCRETE COLLAR, 6" CLOW MODEL 850 WET BARREL HYDRANT, CONCRETE PAD, BREAKAWAY BOLTING, DISINFECTION, TESTING, DEMOLITION AND DISPOSAL, PAVING REMOVAL, TRENCHING, INSTALLATION, BACKFILL, PAVING AND IMPROVEMENTS RESTORATION, AND ALL APPURTENANCES COMPLETE IN PLACE OPERATIONAL AND ACCEPTABLE TO THE CITY AND THE COUNTY FIRE DEPARTMENT. NEW, RELOCATED OR RECONDITIONED HYDRANTS WHERE PAINTING SYSTEM NOT SPECIFIED SHALL BE PAINTED WITH TWO COATS OF ZINC CHROMATE PRIMER AND TWO COATS OF INDUSTRIAL SEVERE SERVICE ENAMEL IN SCHOOL BUS / CAUTION YELLOW PER CITY AND WATER DEPARTMENT STANDARDS. RELOCATED HYDRANTS SHALL BE RECONDITIONED TO A NEW CONDITION. FITTINGS AND VALVES SHALL NOT BE REUSED. BACKFILL ABOVE PIPE ZONE TO BASE OF IMPROVEMENT SHALL BE SLURRY.

15. CONTRACTOR SHALL PROVIDE ALL NECESSARY ASSISTANCE, MATERIALS AND EQUIPMENT FOR ANY FIRE DEPARTMENT REQUIRED PROOF TESTING. HYDRANT FAILING TO MEET THE FIRE DEPARTMENT STANDARDS OR TESTING SHALL BE CORRECTED OR REPLACED AND RETESTED TO FIRE DEPARTMENT SATISFACTION.

16. TEE CUT REQUIRED FOR ASPHALT CONCRETE PAVING REPAIR AT ALL TRENCH AND EXCAVATION IN PAVED AREAS. ALL EDGES SHALL BE SAWCUT TO RECTANGULAR PATTERN AFTER TRENCH IS BACKFILLED AND BEFORE ASPHALT REPAIR. PRIME ALL CONTACT AREAS. IF TRENCH EDGE IS WITHIN FOUR FEET OF GUTTER OR CURB CONTINUE THE 2 INCH GRIND TO EDGE OF PAVEMENT, OR REMOVE AND REPLACE PAVING FROM TRENCH TO GUTTER. REPLACEMENT AC SHALL BE OF MINIMUM THICKNESS SHOWN AND 1 INCH GREATER IN THICKNESS THAN THE EXISTING SECTION. ASPHALT REMOVED SHALL BE DISPOSED OFFSITE AND MAY NOT BE USED IN BACKFILL.

17. TRENCH CUT IN EXISTING PCC STREET OR ALLEY SHALL BE SAWCUT BEFORE REMOVAL OF ROADWAY SURFACE. CONCRETE SHALL BE LEGALLY DISPOSED OF OFFSITE AND MAY NOT BE USED IN BACKFILL. PCC SHALL BE SAWCUT TO PROVIDE STRAIGHT RECTANGULAR JOINTS. BASE MATERIAL REMOVED SHALL BE REPLACED WITH CONCRETE. NEW CONCRETE ROADWAY MINIMUM 1" GREATER IN THICKNESS THAN THE EXISTING SECTION AND A MINIMUM 6" THICKNESS SHALL BE CONSTRUCTED WITHIN THESE LIMITS. EXPANSION JOINTS SHALL BE PLACED AT A MAXIMUM SPACING OF 30 FEET. CONCRETE SHALL BE 520-A-2500 MINIMUM.

18. REMOVE EXISTING WATER PIPE, FITTINGS, APPURTENANCES, VALVES AND DISPOSE OFF-SITE. ALL EXCAVATION AND DEMOLITION, REMOVAL TRANSPORT AND DISPOSAL SHALL BE IN ACCORDANCE WITH LEGAL REQUIREMENTS INCLUDING, BUT NOT LIMITED TO SCAQMD, OSHA, CAL-OSHA, HEALTH DEPARTMENT, STATE, FEDERAL AND LOCAL REQUIREMENTS. PIPE REMOVAL INCLUDES ALL APPURTENANCES. REPLACE WITH NEW DUCTILE IRON PIPE, FITTINGS, VALVES, SERVICES, HYDRANTS, APPURTENANCES AND CONNECTIONS OF THE SIZES, TYPES AND CONFIGURATIONS SHOWN AND SPECIFIED. GROUP NEW VALVES AT TEE/ CROSS WHEREVER POSSIBLE.

19. CONTRACTOR TO NOTIFY BUSINESS/ RESIDENCE OCCUPANTS WHOSE WATER SERVICE WILL BE AFFECTED BY THE CONSTRUCTION 72 HOURS PRIOR TO DISCONTINUANCE OF SERVICE, THEN AT 24 HOURS IN ADVANCE OF SHUT OFF AND CHANGE OVER. HIGHLINE SERVICES REQUIRED FOR ALL AFFECTED OCCUPANTS.

20. WHERE STEEL PIPE INSTALLATION IS REQUIRED, IT SHALL BE DOUBLE CEMENT MORTAR LINED (AND EPOXY OR CEMENT MORTAR COATED AS SHOWN OR REQUIRED), WELDED CONNECTIONS AND COMPLETELY PATCHED INSIDE AND OUT PRIOR TO ACCEPTANCE AND BEING PLACED IN SERVICE. PRESSURE TEST AND DISINFECTION REQUIRED PER AWWA.

21. BACKFILL AT WATER MAINS ABOVE PIPE ZONE TO LOWER LIMIT OF PAVING SHALL BE THREE QUARTER SACK SAND CEMENT SLURRY ABOVE PIPE ZONE BEDDING.

22. INSTALLATION OF HDPE PIPE BY DIRECTIONAL DRILLING AT INTERFERING UTILITY CROSSING LOCATIONS MAY BE PERMITTED AS OPTIONAL METHOD SUBJECT TO APPROVAL BY JURISDICTIONAL AUTHORITIES. SUBMITTAL OF METHOD REQUIRED. SDR/DR AS REQUIRED BY ENGINEER.

SEWER CONSTRUCTION GENERAL NOTES

1. SEWER CONSTRUCTION PERMIT SHALL BE OBTAINED AND PUBLIC WORKS CONSTRUCTION INSPECTION SCHEDULED PER CITY REQUIREMENTS. PERMIT FROM OTHER JURISDICTIONS FOR EXCAVATION IN STREETS IS RESPONSIBILITY OF CONTRACTOR.

2. THE CONTRACTOR SHALL PROVIDE SURVEY STAKES ON THE PROPERTY LINE OR PROPERTY LINES PRODUCED AT RIGHT ANGLES TO THE SEWER LINE STATIONED ON THE LINE CONNECTING THE CENTERLINE OF MANHOLES SHOWING LATERALS.

3. VITRIFIED CLAY PIPE JOINTS SHALL BE TYPE "D" OR "G" IN ACCORDANCE WITH SECTION 208-2 OF THE STANDARD SPECIFICATIONS.

4. HOUSE LATERALS TO BE REPLACED SHALL BE CONSTRUCTED TO PROPERTY LINE AND CONNECTED OR CAPPED AS REQUIRED. ALL CONNECTION PER LACSD AND CITY STANDARDS. WYE OR TEE BRANCHES MAY BE USED FOR CONNECTIONS TO MAINLINE SEWERS EXCEPT AS NOTED. FOR POWER POLE WITHIN THREE FEET OF THE SEWER PIPE, THE SEWER SHALL BE ENCASED PER LACDPW STANDARD PLAN 2023-2, CASE II, FOUR FEET EACH WAY FROM LIMITS OF POLE.

5. CONNECTIONS BETWEEN VITRIFIED CLAY AND CAST/DUCTILE IRON PIPES SHALL BE MADE USING RUBBER SLEEVE JOINT, TYPE "D" PER STANDARD SPECIFICATIONS SECTION 208-2. BUSHING INSTALLED IF REQUIRED.

6. SEWER WYE AND LATERAL DETAILS AND STANDARD DETAILS ARE SHOWN OR REFERENCED. NEW LATERAL FROM NEW SEWER TO JOIN PER DETAIL. LATERALS AND WYES TO BE LOCATED AT LEAST FIVE FEET APART AND MINIMUM FIVE FEET FROM ANY MANHOLE IN ACCORDANCE WITH LOS ANGELES COUNTY PUBLIC WORKS AND LACSD STANDARDS.

7. VITRIFIED CLAY PIPE LATERALS OR SEWERS FOUND TO HAVE LESS THAN FOUR FEET OF COVER SHALL BE ENCASED PER LOS ANGELES COUNTY STANDARD PLAN 2023-2, CASE II, AS A PART OF THE SEWER MAIN LINE CONSTRUCTION UNLESS OTHERWISE DIRECTED BY THE ENGINEER.

8. WHERE PVC SEWER IS ALLOWED, PIPE SHALL BE SDR 26 OR HEAVIER AND BE SPECIFICALLY APPROVED FOR SANITARY SEWER SERVICE. DETAILED SUBMITTAL AND APPROVAL, PRIOR TO USE, ARE NECESSARY.

9. FOR SEWER PIPES WITHIN THE VICINITY OF POTABLE WATER PIPES, REFER TO AND COMPLY WITH THE COUNTY DEPARTMENT OF HEALTH, COUNTY PUBLIC WORKS, CA DEPT. OF HEALTH AND THE STANDARD DETAILS HEREIN.

10. MANHOLES PRECAST PER APWA STANDARD PLAN 200-2 OR PER L.A. COUNTY DEPT. OF PUBLIC WORKS STANDARD PLAN 2003-2 EXCEPT AS NOTED OR DETAILED OTHERWISE. MANHOLES AT LACSD CONNECTION POINTS SHALL MEET LACSD REQUIREMENTS.

11. RESURFACE/REPLACE PAVED SURFACES AS SHOWN AND PER STANDARD DETAILS. LOCAL INSPECTION AND JURISDICTIONAL AGENCY INSPECTION REQUIRED. TEE CUT AND ALL REQUIREMENTS FOR JOINING EXISTING SHALL BE ENFORCED. PERMIT FOR WORK IN COUNTY STREETS REQUIRED AT CONTRACTOR'S EXPENSE.

12. BACKFILL IN STREET SHALL BE IN FULL COMPLIANCE WITH THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION SECTION 217-2. EXCEPT AS MODIFIED HEREIN. CERTIFICATION OF THE BACKFILL MATERIALS AND COMPACTION SHALL BE PERFORMED BY AN INDEPENDENT AND CERTIFIED TESTING SERVICE AND LABORATORY ENGAGED BY THE CONTRACTOR, AT CONTRACTOR'S EXPENSE AND APPROVED BY THE CITY AND THE ENGINEER. ALL COMPLIANCE TEST RESULTS SHALL BE SUBMITTED, THREE RING BOUND, TO THE CITY PRIOR TO ACCEPTANCE OF THE PROJECT.

13. BACKFILL OUTSIDE OF PAVED, RIGHT OF WAY, OR IMPROVED AREAS SHALL BE COMPACTED TO 90% OF THE MAXIMUM DENSITY AS DETERMINED BY ASTM SOIL COMPACTION TEST D 1557-78, METHOD "D" UNLESS OTHERWISE SPECIFIED. THE COMPLIANCE TESTING SHALL BE PERFORMED BY A QUALIFIED INDEPENDENT LABORATORY ENGAGED BY THE CONTRACTOR, AT CONTRACTOR'S EXPENSE AND ACCEPTABLE TO THE CITY ENGINEER. ALL TEST RESULTS SHALL BE SUBMITTED TO THE CITY BOUND CHRONOLOGICALLY IN A 3 RING BINDER PRIOR TO PROJECT ACCEPTANCE BY THE CITY.

14. TOP OF MANHOLE TO BE SIX (6") INCHES ABOVE FINISHED GRADE IN ANY UNIMPROVED RIGHT OF WAY.

15. LEAKAGE TESTING TO BE PER SECTION 306-7.8.2.4. OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION UNLESS MORE STRINGENT TESTING IS SPECIFIED OR REQUIRED BY LOCAL REGULATION, LACDPW OR LACSD.

16. COMPLIANCE WITH THE MOST STRINGENT OF LOS ANGELES COUNTY SEWER STANDARDS, STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION OR PLANS AND SPECIFICATIONS IS REQUIRED UNLESS OTHERWISE DIRECTED IN WRITING BY THE ENGINEER.

17. ANY CONNECTION FOR DISPOSAL OF INDUSTRIAL WASTE MUST HAVE BEEN ISSUED A COUNTY SANITATION DISTRICTS PERMIT FOR INDUSTRIAL WASTE DISCHARGE AND A COPY THEREOF MUST BE ON SITE FOR INSPECTION BY LOCAL JURISDICTION.

18. BEFORE CONSTRUCTION OF A CONNECTION TO A COUNTY SANITATION DISTRICT SEWER AND PRIOR TO FINAL ACCEPTANCE OF THE PROJECT THE LOS ANGELES COUNTY SANITATION DISTRICT INSPECTOR SHALL BE NOTIFIED FOR INSPECTION, (TELEPHONE # (310) 638-1161). RECORD OF INSPECTION AND SIGN OFF BY SANITATION DISTRICT IS TO BE SUBMITTED PRIOR TO PROJECT CLOSE OUT.

19. REQUIREMENTS FOR WORKING IN CONFINED SPACES SHALL BE IN ACCORDANCE WITH THE STANDARD SPECIFICATIONS AS AMENDED BY THE SANITATION DISTRICTS AND WITH THE REQUIREMENTS OF Cal/OSHA.

20. SEWER MANHOLES SHALL BE ADJUSTED TO GRADE AS NECESSARY BY THE ADDITION OF PRECAST RINGS OR FORMED CAST IN PLACE CONCRETE AND SHALL BE FINISHED WITH CONCRETE SURFACE TO MATCH EXISTING ASPHALT. FERROUS RAISING RINGS NOT ALLOWED.

21. MANHOLE COVERS SHALL BE PER CITY OR AGENCY STANDARD AND SHALL INCORPORATE THE NAME AND DESIGNATIONS REQUIRED BY THE CITY OR AGENCY.

22. CONTRACTOR TO FIELD LOCATE AND CONNECT ALL EXISTING SEWER LATERALS TO NEW SEWER MAIN LINE. AS A PART OF MAINLINE CONSTRUCTION, CONNECTIONS SHALL BE PER LACSD AND CITY STANDARDS.

23. CONTRACTOR TO PROVIDE A BYPASS OR ALTERNATE METHOD TO MAINTAIN SEWER SERVICEABILITY WHILE CONSTRUCTING NEW SEWER MAIN SEGMENTS IN ACCORDANCE WITH CITY NPDES PERMIT. SUBMIT PROPOSED METHOD FOR REVIEW BY ENGINEER & CITY 72 HOURS PRIOR TO CONSTRUCTION. METHODS TO BE IN ACCORDANCE WITH CITY GENERAL NPDES PERMIT.

24. CONTRACTORS TO NOTIFY BUSINESS/ RESIDENCE OCCUPANTS THAT WILL BE AFFECTED BY THE CONSTRUCTION FOR EACH SEWER SEGMENT 72 HOURS, THEN AT 24 HOURS IN ADVANCE OF INTERRUPTIONS.

NOTES

1. ALL LATERALS SHALL BE CUT BACK A SUFFICIENT DISTANCE TO ALLOW RECONNECTION WITHOUT ADDITIONAL BENDS. IF LATERAL IS DEFICIENT, REMOVE AND REPLACE IT WITH NO ADDITIONAL COST TO THE CITY.
2. CONTRACTOR TO PROVIDE SEWER BYPASS SYSTEM DURING CONSTRUCTION TO KEEP ALL OCCUPANTS IN SERVICE. ANY FLOW BYPASS SYSTEM INVOLVING CSD MANHOLES SHALL BE IN ACCORDANCE WITH SECTION 500-1.1.7 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION AS AMENDED BY CSD.
3. CONTRACTOR TO PROVIDE TEMPORARY WATER SERVICE HIGHLINE TO ALL OCCUPANTS WHERE WATER SERVICE MAY BE INTERRUPTED.
4. FIELD VERIFY LOCATION OF EACH LATERAL AT EACH PROPERTY PRIOR TO BEGINNING CONSTRUCTION.
5. WATER SERVICES REFERENCED FROM WATER METERS.
6. CONTRACTOR MAY ADJUST THE PIPE HORIZONTAL OR VERTICAL ALIGNMENT TO MAINTAIN ADEQUATE SEPARATION BETWEEN WATER AND SEWER LINE WITH NO ADDITIONAL COST TO THE CITY.
7. EXISTING MANHOLE SHALL BE REMOVED AND LEGALLY DISPOSED OF OFFSITE.
8. CONTRACTOR SHALL POTHOLE TO VERIFY LOCATION AND DEPTH OF ALL UTILITY CROSSINGS PRIOR TO PROCUREMENT OF MATERIALS OR COMMENCEMENT OF CONSTRUCTION ACTIVITIES.

NOTES

1. ALL LATERALS SHALL BE CUT BACK A SUFFICIENT DISTANCE TO ALLOW RECONNECTION WITHOUT ADDITIONAL BENDS. IF LATERAL IS DEFICIENT, REMOVE AND REPLACE IT WITH NO ADDITIONAL COST TO THE CITY.
2. CONTRACTOR TO PROVIDE SEWER BYPASS SYSTEM DURING CONSTRUCTION TO KEEP ALL OCCUPANTS IN SERVICE. ANY FLOW BYPASS SYSTEM INVOLVING CSD MANHOLES SHALL BE IN ACCORDANCE WITH SECTION 500-1.1.7 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION AS AMENDED BY CSD.
3. CONTRACTOR TO PROVIDE TEMPORARY WATER SERVICE HIGHLINE TO ALL OCCUPANTS WHERE WATER SERVICE MAY BE INTERRUPTED.
4. FIELD VERIFY LOCATION OF EACH LATERAL AT EACH PROPERTY PRIOR TO BEGINNING CONSTRUCTION.
5. WATER SERVICES REFERENCED FROM WATER METERS.
6. CONTRACTOR MAY ADJUST THE PIPE HORIZONTAL OR VERTICAL ALIGNMENT TO MAINTAIN ADEQUATE SEPARATION BETWEEN WATER AND SEWER LINE WITH NO ADDITIONAL COST TO THE CITY.
7. EXISTING MANHOLE SHALL BE REMOVED AND LEGALLY DISPOSED OF OFFSITE.
8. CONTRACTOR SHALL POTHOLE TO VERIFY LOCATION AND DEPTH OF ALL UTILITY CROSSINGS PRIOR TO PROCUREMENT OF MATERIALS OR COMMENCEMENT OF CONSTRUCTION ACTIVITIES.

SECTION B

NOTES:

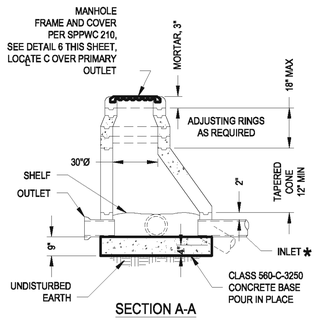
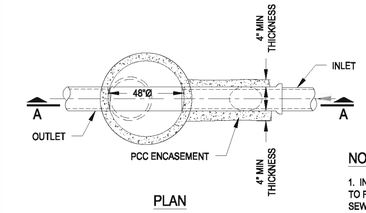
1. SHELF FORMED IN PLACE TO PROVIDE SMOOTH TRANSITION TO ALL CONNECTION SEWERS. SLOPE ALL SHELF SURFACES TO DRAIN.
2. PENETRATIONS INTO MANHOLE SHAFT TO BE MADE BY CORE DRILL.
3. WHERE REQUIRED, LINED MANHOLES TO BE PROVIDED, REPAIRED PER STANDARDS FOR LINING (PVC EPOXY).
4. INSTALL TEMPORARY HALF CIRCLE PLYWOOD COVERS TO FIT MANHOLE ID TO PREVENT DEBRIS ENTRY INTO SEWER PIPES, FAILURE TO PREVENT DEBRIS ENTRY REQUIRES CLEANING OF AFFECTED REACHES AT CONTRACTORS EXPENSE
5. EXISTING PIPES TO BE SUPPORTED DURING MANHOLE BASE CONSTRUCTION
6. PRECAST BASES REQUIRE APPROVAL OF ENGINEER AND DEPARTMENT OF PUBLIC WORKS.
7. STEPS STAINLESS STEEL OR PLASTIC COATED STEEL. APPROVAL SUBMITTAL REQUIRED.
8. CONCRETE FOR ALL PRECAST UNITS SHALL BE COMPACTLY VIBRATED IN THE FORMS. IT SHALL BE CURED ACCORDING TO THE APPROVED PRACTICE (STEAM, SPRINKLING, MEMBRANE SOLUTION, OR A COMBINATIONS OF THOSE) MINIMUM 28 DAYS STRENGTH SHALL BE 3500 PSI.

✱ . FOR CONNECTION TO EXISTING SEWER LINE, CUT EXISTING LINE AND JOIN TO INLET STUB BY STAINLESS STEEL REPAIR CLAMP STYLE LSS1 OR LSS2 BY ROMAC OR EQUAL.

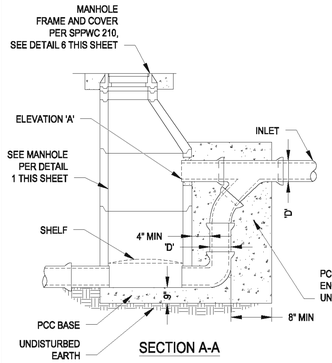


SECTION A-A

3 DS-1 PRECAST CONCRETE SHALLOW MANHOLE
NOT TO SCALE



PLAN



SECTION A-A

NOTES:

1. INSTALL TEMPORARY HALF CIRCLE PLYWOOD COVERS TO FIT MANHOLE ID TO PREVENT DEBRIS ENTRY INTO SEWER PIPES, FAILURE TO PREVENT DEBRIS ENTRY REQUIRES CLEANING OF AFFECTED REACHES AT CONTRACTORS EXPENSE
2. DAMAGED PIPE SHALL BE REPAIRED AT CONTRACTOR EXPENSE.
3. CONCRETE FOR DROP SECTIONS TO BE FORMED.
4. PENETRATIONS INTO MANHOLES TO BE MADE BY CORE DRILL.
5. LINED MANHOLES TO BE REPAIRED PER STANDARDS FOR LINING (PVC 6" TURNBACK)(APPLIED COATING-RECOAT SUFFICIENT AREA TO ACHIEVE PERMANENT BOND). HOLIDAY TESTING REQUIRED.
6. INSTALL TEMPORARY HALF CIRCLE PLYWOOD COVERS ON SHELF TO FIT MANHOLE ID TO PREVENT DEBRIS ENTRY TO SEWER PIPE.
7. PCC CONCRETE TO BE 560-C-3250 MINIMUM, FOR SHORTENED CURE TIME CONCRETE TO BE 600-C-3000 MINIMUM.
8. DETAIL TO BE USED FOR JOINING (E) MANHOLE WHERE DROP REQUIRED.

4 DS-1 DROP SEWER MANHOLE
NOT TO SCALE

NOTES:

1. CONTRACTOR TO VERIFY SIZE AND CONDITION OF EXISTING LATERAL. RECONSTRUCTION TO MATCH EXISTING.
2. CONTRACTOR SHALL FIELD LOCATE AND MARK ALL LATERALS PRIOR TO BEGINNING CONSTRUCTION.
3. LATERALS SHALL BE EXTRA STRENGTH VCP.

5 DS-1 SEWER LATERAL CONNECTION
NOT TO SCALE

NOTES:

1. 48" STANDARD "A" AND SHALLOW MANHOLES (DETAILS 1, 2, 3) SHALL HAVE 30" COVERS.
2. FOR FRAMES AND COVER IN EASEMENTS, ALLEYS, PARKWAYS, AND UNIMPROVED AREA INSTALL 4 - ½" INSERTS FOR LOCK DOWN STUDS IN TOP GRADE RING ALIGNED WITH FRAME. FRAME BOLTED TO GRADE RING. FINISH ELEVATION AS SHOWN IN SPPWC.
3. INSTALLATION OF GRADE RINGS, SEE DETAIL 1.
4. ADJUST MANHOLE FRAME AND COVER (WITH COLLAR) TO FINAL PAVING GRADE.
5. SHAFT LOCATIONS: CENTERED AT OUTLET SIDE
6. COVER TO BE COATED IN PLACE WITH BITUMINOUS MATERIAL AFTER INSTALLATION.
7. FOR SHORTENED CURE TIME, CONCRETE TO BE 600-C-3000 MIN./ LOW SLUMP.

6 DS-1 TRAFFIC MANHOLE FRAME & COVER
NOT TO SCALE

NOTES:

1. GRIND EXISTING PAVEMENT TO 0.15 FT. DEPTH A MINIMUM OF ONE FOOT BEYOND LIMITS OF TRENCH. (TEE CUT)
2. BEDDING 'A' SHALL BE COMPOSED OF SAND, HAVING A CERTIFIED SAND EQUIVALENT OF NOT LESS THAN 30, CONFORM TO THE SAND GRADATION TABLE HEREIN AND SHALL BE COMPACTED TO 90% OF MAX. DENSITY.
3. REPLACEMENT ASPHALT CONCRETE OR CONCRETE SECTIONS SHALL BE PER CITY OF COMPTON STANDARDS WITH AC OR PCC THICKNESS MINIMUM OF ONE INCH GREATER THAN EXISTING. PCC SHALL BE CLASS 520-C-2500. AC SHALL BE PER BID DOCUMENTS. AC MINIMUM 4" IN LOCAL STREETS, MINIMUM 8" IN ARTERIALS. MINIMUM PCC PAVING 6".
4. BEDDING 'B' SHALL BE COMPOSED OF SAND OR OTHER GRANULAR MATERIAL INSTALLED TO SECTION 306-1.2.1 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION, LATEST EDITION. BEDDING 'B' SHALL BE COMPACTED TO A RELATIVE DENSITY OF NOT LESS THAN 90%.
5. BACKFILL SHALL BE PER SECTION 217 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION, LATEST EDITION. BACKFILL ABOVE PIPE ZONE FOR WATER MAINS SHALL BE ¾ SACK SLURRY.
6. IF TRENCH IS WITHIN 4 FEET OF CURB OR GUTTER, GRIND PAVING 0.15' TO EDGE OF PCC OR REMOVE AND REPLACE AC TO EDGE OF PCC GUTTER/ CURB, AC TO BE REPLACED TO A SMOOTH JOIN WITH EXISTING, MAXIMUM ¼" / 10' DEVIATION FROM TRUE.
7. EXISTING PAVEMENT SHALL BE SAWCUT TO CLEAN STRAIGHT LINES IN A RECTANGULAR PATTERN PRIOR TO REMOVAL. PCC SURFACES TO BE JOINED WITH NEW PCC SHALL BE STRAIGHT AND TRUE AND PREPARED WITH CONCRETE BONDING MATERIAL APPROVED BY THE ENGINEER.

(2) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:

GRANTED TO:	CITY OF COMPTON, A MUNICIPAL CORPORATION
PURPOSE:	PUBLIC STREET AND INCIDENTAL PURPOSES
RECORDING DATE:	AUGUST 27, 1959
RECORDING NO:	BOOK D585, PAGE 834 OF OFFICIAL RECORDS

LEGAL DESCRIPTION:

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE CITY OF COMPTON IN THE COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

THE NORTHERLY 223.5 FEET OF THE NORTHWEST QUARTER OF THE NORTHWEST QUARTER OF LOT "G" OF THE TEMPLE AND GIBSON TRACT, IN THE CITY OF COMPTON, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 2, PAGE 540 OF MISCELLANEOUS RECORDS IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

EXCEPT THEREFROM THE EASTERLY 70 FEET THEREOF.

ALSO EXCEPT THEREFROM THAT PORTION OF SAID LAND AS DESCRIBED IN THE DEED TO THE CITY OF COMPTON, RECORDED OCTOBER 1, 1948 AS INSTRUMENT NO. 1844, IN BOOK 28405, PAGE 70 OF OFFICIAL RECORDS, AS TO PARCELS 1 AND 2 BELOW:

PARCEL 1:

THAT PORTION OF SAID LOT "G" OF THE TEMPLE AND GIBSON TRACT, IN THE CITY OF COMPTON, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 2, PAGE 540 OF MISCELLANEOUS RECORDS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, DESCRIBED AS FOLLOWS:

BEGINNING AT A POINT IN THE NORTHERLY LINE OF SAID LOT "G" (SAID NORTHERLY LINE BEARS NORTH 89° 58' 40 EAST), DISTANT THEREON 592.62 FEET EASTERLY FROM THE NORTHWESTERLY CORNER OF SAID LOT "G";

THENCE SOUTH 13° 19' 40" EAST, A DISTANCE OF 223.80 FEET;

THENCE SOUTH 89° 38' 40" WEST, A DISTANCE OF 30 FEET:

THENCE NORTH 13° 19' 40" WEST TO THE NORTHERLY LINE OF SAID LOT "G";

THENCE EASTERLY ALONG SAID NORTHERLY LINE OF SAID LOT "G" TO THE POINT OF BEGINNING TO BE KNOWN AS KEMP STREET.

PARCEL 2:

THE WESTERLY 27 FEET OF THE NORTHERLY 223.50 FEET TO THE NORTHWEST QUARTER OF LOT "G" OF TEMPLE AND GIBSON TRACT, IN THE CITY OF COMPTON, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 2, PAGE 540 OF MISCELLANEOUS RECORDS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, TO BE KNOWN AS DWIGHT STREET.

EXCEPT THEREFROM ALL OIL, GAS, MINERAL AND HYDROCARBON SUBSTANCES LYING BEING A DEPTH OF 500 FEET FROM THE SURFACE OF SAID LAND, WITHOUT RIGHT OF SURFACE ENTRY, WHICH RIGHT IS RESERVED IN THE DEED FROM ROBERT L. HOROWITZ AND ELEANOR HOROWITZ, HIS WIFE, CLARENCE K. HOROWITZ AND ROSALIE H. HOROWITZ, HIS WIFE, AND FREDERICK G. HOROWITZ AND BARBARA J. HOROWITZ, HIS WIFE, RECORDED MARCH 3, 1970 AS INSTRUMENT NO. 215 OF OFFICIAL RECORDS.

LACDPW SEWER AREA STUDY GUIDELINES,

SEWER ATLAS MAP

LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
LAND DEVELOPMENT DIVISION

AREA STUDY

An area study must be made for all private contract sewer projects. See attached sample. The area study must include the following items:

1. Area being served - In Acres
2. Determined Tributary area to main line being designed (incl. areas of future devel.)- In Acres
3. Existing and Land Use Zoning
4. Anticipated Sewer Discharge in cfs of total area based on zoning, and/or heavy water users
5. Existing or proposed utilities if in conflict
6. Existing and proposed sewers showing pipe size and grade leading up to the trunk line in order for you to evaluate the impact of your proposed development on the existing system
7. Direction of sewer flow
8. Contour lines
9. Scale not to be less than 1"=600'
10. North arrow pointing up or to the left

ZONING COEFFICIENTS

ZONE	COEFFICIENT (cfs/Acre)
Agriculture	0.001
Residential	
R-1	0.004
R-2	0.008
R-3	0.012
R-4	0.016 *
Commerical	
C-1 through C-4	0.015 *
Heavy Industrial	
M-1 through M-4	0.021 *

* Individual building, commercial or industrial plant capacities shall be the determining factor when they exceed the coefficients shown.

The coefficient to be used for any zoned areas not listed will be determined by the County based upon the intended development and use.

The County shall determine which of the coefficients or combination of coefficients shall be used for design as determined by the established or proposed zoning in the study area. Any modifications to these coefficients due to topography, development, or hazard areas, shall be approved by the Department of Public Works.

Estimated Average Daily Sewage Flows for Various Occupancies

Occupancy	Abbreviation	*Average daily flow	
Apartment Buildings:			
Bachelor or Single dwelling units	Apt	100	gal/D.U. → 150
1 bedroom dwelling units	Apt	150	gal/D.U. → 200
2 bedroom dwelling units	Apt	200	gal/D.U. → 250
3 bedroom or more dwelling units	Apt	250	gal/D.U. → use 300 GPD per SMD
Auditoriums, churches, etc.	Aud	5	gal/seat
Automobile parking	P	25	gal/1000 sq ft gross floor area
Bars, cocktails lounges, etc.	Bar	20	gal/seat
Commercial Shops & Stores	CS	100	gal/1000 sq ft gross floor area

GRACE ROBINSON HYDE
Chief Engineer and General Manager

April 5, 2019

Ref. Doc. No.: 4998396

Ms. Caitlin Espinoza
Project Coordinator
C & V Consulting, Inc.
6 Orchard, Suite 200
Lake Forrest, CA 92630

Dear Ms. Espinoza:

Will Serve Letter for 930 West Compton Boulevard Residential Project

The Sanitation Districts of Los Angeles County (Districts) received your will serve letter request for the subject project on March 21, 2019. The proposed project is located within the jurisdictional boundaries of District No. 1. We offer the following comments regarding sewerage service:

1. The wastewater flow originating from the proposed project will discharge to a local sewer line, which is not maintained by the Districts, for conveyance to the Districts' Joint Outfall G Unit 5 Trunk Sewer, located along the west side of Compton Creek at Compton Boulevard. The Districts' 31.3-inch diameter lined trunk sewer has a capacity of 7.9 million gallons per day (mgd) and conveyed a peak flow of 5.8 mgd when last measured in 2013.

2. The wastewater generated by the proposed project will be treated at the Joint Water Pollution Control Plant located in the City of Carson, which has a capacity of 400 mgd and currently produces an average flow of 261.1 mgd.

3. The expected average wastewater flow from the project, described in the conceptual site plan as 24 homes, is 6,240 gallons per day. For a copy of the Districts' average wastewater generation factors, go to www.lacsd.org, Wastewater & Sewer Systems, click on Will Serve Program, and click on the Table 1, Loadings for Each Class of Land Use link.

4. The Districts are empowered by the California Health and Safety Code to charge a fee for the privilege of connecting (directly or indirectly) to the Districts' Sewerage System for increasing the strength or quantity of wastewater discharged from connected facilities. This connection fee is a capital facilities fee that is imposed in an amount sufficient to construct an incremental expansion of the Sewerage System to accommodate the proposed project. Payment of a connection fee will be required before a permit to connect to the sewer is issued. For more information and a copy of the Connection Fee Information Sheet, go to www.lacsd.org, Wastewater & Sewer Systems, click on Will Serve Program, and search for the appropriate link. In determining the impact to the Sewerage System and applicable connection fees, the Districts' Chief Engineer and General Manager will determine the user category (e.g. Condominium, Single

Family home, etc.) that best represents the actual or anticipated use of the parcel or facilities on the parcel. For more specific information regarding the connection fee application procedure and fees, please contact the Connection Fee Counter at (562) 908-4288, extension 2727.

5. In order for the Districts to conform to the requirements of the Federal Clean Air Act (CAA), the capacities of the Districts' wastewater treatment facilities are based on the regional growth forecast adopted by the Southern California Association of Governments (SCAG). Specific policies included in the development of the SCAG regional growth forecast are incorporated into clean air plans, which are prepared by the South Coast and Antelope Valley Air Quality Management Districts in order to improve air quality in the South Coast and Mojave Desert Air Basins as mandated by the CCA. All expansions of Districts' facilities must be sized and service phased in a manner that will be consistent with the SCAG regional growth forecast for the counties of Los Angeles, Orange, San Bernardino, Riverside, Ventura, and Imperial. The available capacity of the Districts' treatment facilities will, therefore, be limited to levels associated with the approved growth identified by SCAG. As such, this letter does not constitute a guarantee of wastewater service, but is to advise you that the Districts intend to provide this service up to the levels that are legally permitted and to inform you of the currently existing capacity and any proposed expansion of the Districts' facilities.

If you have any questions, please contact the undersigned at (562) 908-4288, extension 2717.

Very truly yours,

for:

Adriana Raza
Customer Service Specialist
Facilities Planning Department

Appendix G

CITY OF COMPTON ZONING MAP

ZONING
THE USE AND REGULATION OF LAND

All land in the City is divided into zones which regulate, through the Zoning Ordinance of the Compton Municipal Code, how a piece of property can be used and physically developed. These zones are designed to promote orderly development, allowing similar uses to coexist while separating incompatible uses.

1. Automatically Permitted Uses

Uses which require no special permits provided that the physical development of the site meets Municipal Code guidelines. Normal permits such as certificates of occupancy, business licenses, building permits, etc., are still required.

2. Conditionally Permitted Uses

Uses which require a special permit, called a "Conditional Use Permit", in addition to all normal permits. Some uses may be "conditionally" permitted in one zone and "automatically" permitted in another zone. Other uses require a Conditional Use Permit no matter where they are located.

The Zoning Ordinance also prohibits certain uses, either in one or more zones or Citywide. If a use is not listed as "automatically" or "conditionally permitted" in the zone or "conditionally permitted" Citywide it is prohibited.

The physical development of land (setbacks, parking, signs, fences, etc.) is also regulated by the Zoning Ordinance. Proposed development must conform to both the usage and the development requirements for the specific zone.

Zoning within the City of Compton is divided into the following designations:

The "R-A" (Residential Agriculture) Zone, which provides for one-family homes on 10,000 square foot or larger lots and certain agricultural uses.

The "R-L" (Low-Density Residential) Zone, which provides for one-family homes on 5,000 square foot or larger lots.

The "R-M" (Medium-Density Residential) Zone, which provides for one dwelling unit per 2,500 square feet on 5,000 square-foot or larger lots. More than four dwelling units require a Conditional Use Permit.

The "R-H" (High-Density Residential) Zone, which provides for one dwelling unit per 1,250 square feet on 5,000 square foot or larger lots. More than four dwelling units require a Conditional Use Permit.

H. LACDPW Allowable Q

I. Purpose

The purpose of this report is to provide quantitative information to verify the design of the storm drain infrastructure and hydrologic methodology of the project site. The values and statements within the confirm the subject site is designed and planned in accordance to the Los Angeles County Hydrology Manual and the City of Compton drainage requirements.

II. Introduction

The proposed project comprises a total of 2.45 acres and is located 930 W. Compton Boulevard, in the City of Compton (APN: 6161-001-902). The site is bounded by W. Compton Boulevard to the north, W. 151st Street and existing single-family residential to the south, S. Kemp Avenue and existing single-family residential to the east, and Dwight avenue and a liquor store to the west. Refer to Appendix A for the Vicinity Map.

The development proposes to construct 8 buildings of 60 residential units with private garages, private drive aisles, sidewalks, guest parking areas, and common landscaped areas. The project site will be accessible via two entrances/exits along W. 151st Street.

The existing site is currently vacant, pervious land. Elevations onsite range between approximately 81 feet to 85 feet above mean sea level with a relative low point near the northeast corner of the site. Existing site drainage is generally directed as sheet flow in the northeast direction and overflows into the rights-of-way of W. Compton Boulevard and S. Kemp Avenue. Within W. Compton Boulevard and S. Kemp Avenue, two (2) existing catch basins capture and convey stormwater to an existing Los Angeles County Flood Control District (LACFCD) 66" storm drain facility within W. Compton Boulevard which flows in the easterly direction and outlets to the existing Compton Creek. Compton Creek drains to the existing Los Angeles River and ultimately the Pacific Ocean at San Pedro Bay.

Proposed site drainage will be collected and conveyed by two (2) proposed curb-inlet catch basins and an area drain system to two (2) proposed underground detention systems which will discharge to the existing LACFCD 66" storm drain at two (2) points of connection. Low flows will be directed to proposed Modular Wetlands System (MWS) Biofiltration Vaults for water quality treatment prior to entering the proposed detention systems. During larger storm events, stormwater runoff will bypass the treatment systems and be conveyed directly to the proposed detention system. The detention system will be equipped with an orifice to mitigate the peak discharge rate to the allowable peak flowrate (Allowable Q) provided Los Angeles County Department of Public Works (LACDPW). Excess flows will be temporarily detained as they are released at the Allowable Q. Refer to Appendix H for the Allowable Q provided by LACFCD.

III. Methodology

The project site's drainage was analyzed per the Los Angeles County Hydrology Manual. The existing and proposed conditions of the site were analyzed for peak flow rate and time of concentration for the 25-, 50-, and 100-year storm events based on acreage and land cover per the LACDPW HydroCalc software.

IV. Design Assumptions

1. The LACDPW HydroCalc Calculator Program was used to determine Tc, peak run-off flow rate, and run-off volumes for each subarea.

2. The property is located in the "South Gate" rainfall region, per Figure 1-H1.9 of the Hydrology Manual. A depth of 6.15 inches of rainfall was used for the 50-year storm.

3. The site is in the soil classification "003" per Figure 1-H1.9 of the Hydrology Manual.

4. The site was analyzed for a 25-year, 50-year, and 100-year storm events. Copies of the HydroCalc output data can be found in Appendix C of this report. The peak runoff values have also been incorporated into the included hydrology exhibits, which are made a part of this study.

5. Proposed storm drains will be sized to convey the 25-year storm per Section 4.3 of the Hydrology Manual.

6. The existing project site is undeveloped and was assumed to be 1% impervious based on recommended values per the Hydrology Manual.

7. The proposed project site was assumed to be approximately 86% impervious based on the development type and recommended values per the Hydrology Manual.

8. Detention Calculations were determined using the LACDPW HydroCalc output values for the 25-year storm event. Refer to Appendix G of this report for detention calculations.

V. Hydraulic Calculations

Pipe Sizing

Onsite storm drain piping will be sized for the 25-year storm event and will be analyzed based on open channel flow. Therefore, WSPG hydraulic pressure analysis is not warranted.

$Q = \frac{k'}{n} d^{8/3} S^{1/2}$ per King's Handbook

k' = 0.463
d = pipe diameter

n=0.013*
S=0.005

Pipe Diameter	Max. Q (cfs)
8"	0.854
12"	2.518
15"	4.566
18"	7.425
24"	15.991
36"	47.146

n=0.013*
S=0.010

Pipe Diameter	Max. Q (cfs)
8"	1.208
12"	3.562
15"	6.457
18"	10.501
24"	22.614
36"	66.675

*A Manning's Roughness Coefficient of 0.013 has been utilized to represent the roughness coefficient of PVC and/or HDPE piping.

Catch Basin Sizing

Catch Basin Sizing will be provided during final engineering.

100-Year Water Surface Elevation (WSE)

The elevation of the 100-year water surface will be analyzed during final engineering. Building finished floors will be set at a minimum of at least 1 foot above the 100-year WSE.

VI. Conclusions

Below is a summary of the project site existing and proposed conditions peak runoff values.

	DA	Q_{25} (cfs)	Q_{50} (cfs)	Q_{100} (cfs)
Existing Condition	X1	1.70	2.53	3.59
Proposed Condition	1	2.94	3.37	3.80
	2	3.70	4.24	4.78
	Total	6.62	7.59	8.56

Refer to Appendix C of this report for additional information and LACDPW HydroCalc output data.

Since this project proposes to drain directly to the existing LACFCD 66" storm drain facility within W. Compton Boulevard, LACDPW provided an Allowable Q of 1.10 cfs/acre of for the proposed development. The product of the Allowable Q (cfs/acre) and the acreage for each drainage area is the total Allowable Q (cfs) for each drainage area.

The onsite detention required to mitigate the proposed condition peak flowrate during the 25-year storm event to the Allowable Q was calculated by utilizing the 25-year storm event hydrographs generated by the LACDPW HydroCalc software and the total Allowable Q. The area under the hydrograph for all flowrates greater than the total Allowable Q equals the amount of detention required. The results are summarized below:

Drainage Area	Acreage	Allowable Q (cfs) (Acreage x 1.1 cfs/acre)	Required Storage (cf)	Provided Storage
1	1.085	1.194	1,243.8	70 lf of 60" pipe → 1,374.5 cf
2	1.365	1.501	1,564.8	100 lf of 60" pipe → 1,963.5 cf
Total	2.45	2.695	2,722	3,338 cf

Refer to Appendix G for detention calculations.

After the required amount of detention was determined, the orifice diameter required to mitigate the discharge rate was calculated by utilizing the following equation:

$$O = KA\sqrt{2gh}$$ per King's Handbook

Where, O = orifice outflow (cfs)
K = constant, 0.65
A = area of orifice (sf)
g = acceleration due to gravity (32.2 ft/s^2)
h = hydraulic head above orifice (60" pipe → h = 5 ft)

After solving the orifice equation for the area, the minimum required diameter for each drainage area was calculated. Orifice calculations for mitigating the 25-year storm event to the Allowable Q for each drainage area (DA) are shown below:

DA 1

Acreage = 1.085

Allowable Q = 1.194 cfs

$$A = \frac{O}{K\sqrt{2gh}}$$

$$A = \frac{1.194 \text{ cfs}}{0.65\sqrt{(2)(32.2\ ^{ft}/_{s^2})(5 \text{ ft})}} = 0.1024 \text{ ft}^2$$

$$A = \left(\frac{\pi}{4}\right) D^2 \rightarrow D = \sqrt{\frac{4}{\pi}A}$$

$$D = \sqrt{\frac{4}{\pi}(0.1024 \text{ ft}^2)} = 0.361 \text{ ft}$$

$$= 4.33 \text{ in} \rightarrow \text{use } 4.25\text{" orifice}$$

$$O = (0.65)\left(\frac{\pi}{4}\right)\left(\frac{4.25}{12}\text{ft}\right)^2\sqrt{(2)(32.2\ ^{ft}/_{s^2})(5 \text{ ft})} = 1.149 \text{ cfs} < 1.194 \text{ cfs}\checkmark$$

DA 2

Acreage = 1.365

Allowable Q = 1.501 cfs

$$A = \frac{O}{K\sqrt{2gh}}$$

$$A = \frac{1.501 \text{ cfs}}{0.65\sqrt{(2)(32.2\ ^{ft}/_{s^2})(5 \text{ ft})}} = 0.1287 \text{ ft}^2$$

$$A = \left(\frac{\pi}{4}\right) D^2 \rightarrow D = \sqrt{\frac{4}{\pi}A}$$

$$D = \sqrt{\frac{4}{\pi}(0.1287 \text{ ft}^2)} = 0.405 \text{ ft}$$

$$= 4.85 \text{ in} \rightarrow \text{use } 4.75\text{" orifice}$$

$$O = (0.65)\left(\frac{\pi}{4}\right)\left(\frac{4.75}{12}\text{ft}\right)^2\sqrt{(2)(32.2\ ^{ft}/_{s^2})(5 \text{ ft})} = 1.435 \text{ cfs} < 1.501 \text{ cfs}\checkmark$$

Executive Summary

The subject property consists of approximately 2.45 acres of vacant land located at 930 Compton Boulevard in Compton, California (the "Property" or the "Site"). The Property was previously developed with a convalescent hospital. The surrounding area is a mixture of commercial and residential properties. Stantec previously completed a Phase I Environmental Site Assessment (ESA) report for the Property, dated April 27, 2018.

The Phase I Environmental Site Assessment had identified the following recognized environmental conditions (RECs) in connection with the Property:

- Historical Agricultural Use. Based on review of historical documents including aerial photographs and topographic maps, the Property appears to have been used for light agricultural use until circa 1950. Historical agricultural use is considered a REC to the Property. Accordingly, Stantec recommends performing a shallow soil assessment at the Property to evaluate whether residual pesticides or heavy metals associated with historical herbicide applications are present above regulatory screening levels, human health risk criteria or California hazardous waste levels.

To address these recommendations, Stantec performed a Phase II ESA (*i.e.*, subsurface investigation) on April 24, 2019. The Phase II ESA involved the advancement of six (6) shallow soil borings throughout the Property to a depth of 3.0 feet below ground surface (bgs) and collection of soil samples a depth of 1.0 and 3.0 feet bgs. Soil boring locations are notated in Figure 2. The 1.0 feet bgs soil samples from each boring were analyzed for Organochlorine Pesticides (OCP) by EPA test method 8081 and arsenic and lead by EPA test method 6010B. Stantec concludes that this scope of work was sufficient for evaluating the historical agricultural use of the Property.

The results of the analysis of the soil samples reported 4,4'-DDE in sample HA-2-1 at 0.0022 milligrams per kilogram (mg/kg). Additionally, sample HA-6-1 showed concentrations of 4,4'-DDE and 4,4'-DDT reported at 0.0046 and 0.0036, respectively. None of the detections of organochlorine pesticides were above their respective United States Regional Screening Levels (US EPA RSLs) for residential sites. Therefore, the detected levels of organochlorine pesticides do not represent a Recognized Environmental Condition and Stantec recommends no further investigation regarding this issue.

Arsenic was reported above US EPA RSLs for residential sites in five of the six soil samples at concentrations ranging from 1.3 to 4.1 milligrams per kilogram (mg/kg). However, arsenic typically occurs naturally throughout soil in the State of California at levels significantly exceeding the RSL (*i.e.,* the naturally-occurring levels typically range from 0.6 to 12.0 mg/kg). Therefore, reported arsenic concentrations are well within the range of naturally-occurring expected background levels for arsenic in California. Lead was reported in all of six samples collected at concentrations ranging from 4.2 to 19 mg/kg, which are well below the residential soil screening level of 80 mg/kg.

Therefore, the metals associated with herbicide application do not represent a Recognized Environmental Condition and Stantec recommends no further investigation regarding this issue.

Certified analytical reports with chain of custody documentation are provided in Appendix A.

Based on the above results, Stantec concludes that the historical agricultural use of the Property does not represent a REC or a human health risk, in light of the contemplated residential use of the Property, and recommends no further investigation regarding this issue.

1.0 INTRODUCTION

This report documents the methodology and results of a Phase II Environmental Site Assessment (ESA) completed by Stantec Consulting Services Inc. (Stantec) for the real property that approximately 2.4 acres in size and previously developed as a convalescent hospital, located at 930 Compton Boulevard, Compton California (the "Property"). A property location map is illustrated on Figure 1. A property details map illustrating the main features of the Property is provided as Figure 2.

The completed work was conducted in accordance with the Master Services Agreement between Stantec and City Ventures (the "Client"). The scope of work and the results of the investigation are described in subsequent sections. The following subsections provide the property description and a summary of past operations. In the event of any conflict between the terms and conditions of this report and the terms and conditions of the MSA, the MSA shall control.

1.1 PROPERTY DESCRIPTION AND OPERATIONS

The Property consists of approximately 2.45 acres of vacant land. The Property was previously developed with a convalescent hospital. The surrounding area is a mixture of commercial and residential properties. A Property location map is illustrated on Figure 1. A Property Vicinity Plan illustrating the main features of the Property is provided as Figure 2. Photographs taken during the site reconnaissance visit are provided in Appendix A.

1.2 PROPERTY GEOLOGY AND HYDROGEOLOGY

The Property is located in Los Angeles County. The area is located within the Peninsular Ranges Geomorphic Province, which includes northwest-southeast trending mountain ranges and valleys that have been developed by the San Andreas Fault system (California Geological Survey ["CGS"], 2002). The vicinity consists of recent-age alluvium (CDMG, 1962). Soil at a facility 1,500 feet to the west is reportedly sand (Geotracker, 2015).

According to data presented in Adanta Inc.'s *Supplemental Soil Sampling Report* dated July 13, 2017 for the Hooper's Carpet located approximately 130 feet to the northwest, subsurface conditions in the Property vicinity consist of brown sandy clay and clay to approximately 10 feet below ground surface (bgs) underlain by silty sand and sandy silt to approximately 66.5 feet bgs, maximum depth advanced.

The Property is located within the Coastal Plain of Los Angeles Groundwater Basin, Central Subbasin (4-11.04). The basin is located within the southeastern portion of Los Angeles County. The basin is constrained by the La Brea high to the north, bedrock core complexes to the northeast and east, a drainage province boundary to the southeast, and the Newport-Inglewood Fault to the southwest. Two forebays and one pressure area are present in the basin and water-bearing units consist of sand, gravel and clay up to 2,200 feet in thickness (Department of Water Resources [DWR], 2004).

According to data presented in Central Congregation of Jehovah's Witnesses Semi-Annual Groundwater Monitoring Report 2nd Half 2017 located at 1914 West Compton Boulevard, depth to groundwater in the Property vicinity was reported between 36.59 to 45.26 feet bgs with a groundwater flow direction to the northwest.

2.0 BACKGROUND INFORMATION

Stantec completed a Phase I Environmental Site Assessment (ESA) for the Property and identified the following recognized environmental conditions (RECs) associated with the Property:

- Historical Agricultural Use. Based on review of historical documents including aerial photographs and topographic maps, the Property appears to have been used for light agricultural use until circa 1950. Historical agricultural use is considered a REC to the Property. Accordingly, Stantec recommends performing a shallow soil assessment at the Property to evaluate whether residual pesticides or heavy metals associated with historical herbicide applications are present above regulatory screening levels, human health risk criteria or California hazardous waste levels.

Based on these findings a Phase II ESA was recommended for the property. The results of that Phase II ESA are presented below and show that the historical agricultural use does not represent a recognized environmental condition under ASTM E 1527-13.

3.0 FIELD INVESTIGATION PROGRAM

3.1 SCOPE OF WORK

The scope of work consisted of the following general elements:

Pre-Drilling Activities

Prior to the commencement of fieldwork activities Stantec made the following preparations:

- As required by law, Stantec visited the Property to mark the proposed boring locations and acquire a current Underground Service Alert (USA) ticket number prior to commencement of Property drilling activities.
- In accordance with federal OSHA regulations (29 CFR, Section 1910.120), Stantec developed a site-specific Health and Safety Plan (HASP) for the subject property. All Stantec personnel and subcontractors associated with the project were required to be familiar with, and comply with, all provisions of the HASP.

Field Investigation

Stantec provided the services of a field geologist or engineer to supervise and direct all onsite activities. All work was conducted under the supervision of a State of California registered professional and include the following:

- On April 24, 2019, six soil borings (HA-1 through HA-6) were advanced to a depth of 3 feet bgs with soil samples collected at 0.5 to 1.0 foot and 2.5 to 3.0 feet. The soil borings were located at location on the Property where historical agricultural use was noted on aerial photographs. The 1.0 foot soil samples were analyzed for pesticides, lead, and arsenic with the 3 foot soil samples placed on hold pending results from the 1.0 foot samples.

Stantec concludes that this scope of work was sufficient for evaluating the issues identified by the Phase I Environmental Site Assessment.

3.2 SAMPLING PROCEDURES

Soil Sampling

During the investigation, soil samples were collected at depths of 0.5 to 1.0 feet and 2.5 to 3.0 feet. Upon advancement of the hand auger to the desired depth, the auger was withdrawn from the boring, and the contents of the auger bucket were discharged into a clean 8-ounce glass jar provided by the laboratory, and sealed with a threaded Teflon lined lid.

All soil sample containers were sealed tightly and labeled with appropriate identification information (boring number, sample depth, sample collection date, and sample collection time). The samples were then logged on a chain-of-custody form and placed in a cooler for transport to the laboratory. Copies of the chain-of-custody forms are included as Appendix A.

3.3 BORING ABANDONMENT PROCEDURES

Following the completion of drilling and soil sampling, borings were abandoned by removing the sampling equipment from the borehole and subsequently backfilling with soil cuttings.

3.4 DECONTAMINATION PROCEDURES

To maintain quality control during soil sampling, prior to each sampling interval, the sampling equipment was decontaminated in an Alconox scrub solution and double-rinsed, first with tap water followed by a final rinse using distilled water.

3.5 WASTE DISPOSAL

All soil cuttings generated during this investigation were used to backfill the boring.

4.0 LABORATORY TESTING PROGRAM

A total of twelve (12) soil samples from the Property collected during this investigation were delivered under chain-of-custody (Appendix A) to Advanced Technology Laboratories (ATL) based out of Signal Hill, California. ATL is certified to perform hazardous waste testing by the State of California Department of Health Services, Environmental Laboratory Accreditation Program.

Six (6) soil samples were analyzed for arsenic and lead by EPA test method 6010B and organochlorine pesticides by EPA test method 8081A. Analytical results are tabulated in Table 1 and Table 2. Analytical laboratory test results are included in Appendix A and discussed in Section 5.0.

5.0 INVESTIGATION RESULTS

5.1 FIELD OBSERVATIONS

On April 24, 2019, Stantec personnel advanced six (6) borings at the Property. Soils encountered during the investigation consisted of silty sand. No groundwater was encountered in any of the boreholes. No staining or hydrocarbon odors were observed in any of the boreholes.

5.2 ANALYTICAL RESULTS

The laboratory test results are discussed below. Laboratory test results are summarized in attached Table 1 and Table 2. The complete laboratory analytical test results are presented on the laboratory data sheets attached as Appendix A.

Soil Samples

The results of the analysis of the soil samples reported 4,4'-DDE in sample HA-2-1 at 0.0022 milligrams per kilogram (mg/kg). Additionally, sample HA-6-1 had concentrations of 4,4'-DDE and 4,4'-DDT reported at 0.0046 and 0.0036, respectively. None of the detections of organochlorine pesticides were above their respective United States Regional Screening Levels (US EPA RSLs) for residential sites. Therefore, the detected levels of organochlorine pesticides do not represent a Recognized Environmental Condition and Stantec recommends no further investigation regarding this issue.

Arsenic was reported above US EPA RSLs for residential sites in five of the six soil samples at concentrations ranging from 1.3 to 4.1 milligrams per kilogram (mg/kg). However, arsenic occurs naturally throughout California at levels significantly exceeding the RSL (0.6 to 12.0 mg/kg). Therefore, reported arsenic concentrations are well within the range of naturally-occurring expected background levels for arsenic in California. Lead was reported in all of six samples collected at concentrations ranging from 4.2 to 19 mg/kg, which are well below the residential soil screening level of 80 mg/kg. Therefore, the metals associated with herbicide does not represent a Recognized Environmental Condition and Stantec recommends no further investigation regarding this issue.

Certified analytical reports with chain of custody documentation are provided in Appendix A.

Based on the above results, Stantec concludes that the historical agricultural use of the Property does not represent a REC or a human health risk in light of the contemplated residential use of the Property and recommends no further investigation regarding this issue.

6.0 LIMITATIONS

The conclusions presented in this report are professional opinions based on data described in this report. The opinions of this report have been arrived at in accordance with currently accepted hydrogeologic and engineering standards and practices applicable to this location, and are subject to the following inherent limitations. Stantec makes no other warranty, either expressed or implied, concerning the conclusions and professional advice that is contained within the body of this report.

Inherent in most projects performed in a heterogeneous subsurface environment, continuing excavation and assessments may reveal findings that are different than those presented herein. This facet of the environmental profession should be considered when formulating professional opinions on the limited data collected on these projects.

This report has been issued with the clear understanding that it is the responsibility of the owner, or their representative, to make appropriate notifications to regulatory agencies. It is specifically not the responsibility of Stantec to conduct appropriate notifications as specified by current County and State regulations.

The information presented in this report is valid as of the date our exploration was performed. Property conditions may degrade with time; consequently, the findings presented herein are subject to change. In the event of any conflict between the terms and conditions of this report and the terms and conditions of the Master Services Agreement (MSA), the MSA shall control.

Re: ATL Work Order Number : 1901660
Client Reference : CV Compton, 185804169

Enclosed are the results for sample(s) received on April 24, 2019 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

Eddie Rodriguez
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

San Bernardino , CA 92408		Reported :	05/01/2019

Notes and Definitions

M2	Matrix spike recovery outside of acceptance limit due to possible matrix interference. The analytical batch was validated by the laboratory control sample.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

SAMPLE RECEIPT

1. Sample receiving hours: 7:30 AM to 7:30 PM Monday - Friday; Saturday 8:00 AM to 12:00 PM.
2. Samples submitted AFTER 3:00 PM are considered received the following business day at 8:00 AM.
3. The following turnaround time conditions apply:
   - TAT = 0 : 300% Surcharge SAME BUSINESS DAY if received by 9:00 AM
   - TAT = 1 : 100% Surcharge NEXT BUSINESS DAY (COB 5:00 PM)
   - TAT = 2 : 50% Surcharge 2ND BUSINESS DAY (COB 5:00 PM)
   - TAT = 3 : 30% Surcharge 3RD BUSINESS DAY (COB 5:00 PM)
   - TAT = 4 : 20% Surcharge 4TH BUSINESS DAY (COB 5:00 PM)
   - TAT = 5 : NO SURCHARGE 5th BUSINESS DAY (COB 5:00 PM)
4. Weekend, holiday, after-hours work --- ask forquote.
5. Subcontract TAT is 10 - 15 business days. Projects requiring shorter TATs will incur a surcharge respective to the subcontract lab --- ask for quote.
6. Liquid and solid samples will be disposed of after 45 calendar days from receipt of samples; air samples will be disposed of after 14 calendar days after receipt of samples.
7. Electronic records maintained for five (5) years from report date.
8. Hard copy reports will be disposed of after 45 calendar days from report date.
9. Storage and Report Fees:
   - Liquid & solid samples: Complimentary storage for forty-five (45) calendar days from receipt of samples; $2/sample/month if extended storage or hold is requested.
   - Air samples: Complimentary storage for ten (10) calendar days from receipt of samples; $20 sample/week if extended storage is requested.
   - Hard copy and regenerated reports/EDDs: $17.50 per hard copy report requested; $50.00 per regenerated/reformatted report; $35 per reprocessed EDD.
10. Rush TCLP/STLC samples: add 2 days to analysis TAT for extraction procedure.
11. Unanalyzed samples will incur a disposal fee of $7 per sample.
12. The laboratory will randomly select from all QC samples received the sample to spike for Matrix Spike/Matrix Spike Duplicate (MS/MSD) at no cost. However, if you want the laboratory to additionally perform MS/MSD on your sample, a charge will be assessed for the specific sample used.

Sign-off Sheet and Signatures of Environmental Professionals

This Phase I Environmental Site Assessment was prepared by Stantec Consulting Services Inc. (Stantec) for City Ventures. The material in it reflects Stantec's best judgment in light of the information available to it at the time of preparation. Any use which a third party makes of this report, or any reliance on or decisions made based on it, are the responsibilities of such third parties. Stantec accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this report.

All information, conclusions, and recommendations provided by Stantec in this document regarding the Phase I ESA have been prepared under the supervision of and reviewed by the professionals whose signatures appear below.

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Property. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

1.0 SUMMARY

This Phase I Environmental Site Assessment (ESA) report was prepared by Stantec Consulting Services Inc. (Stantec), on behalf of City Ventures (the "Client"), for the property located at 930 Compton Boulevard, Compton, California (the "Property" or the "Site"). City Ventures (the "User") has been designated as the User of this report.

The Phase I ESA was conducted in conformance with the requirements of ASTM International (ASTM) Designation E 1527-13, All Appropriate Inquiries (AAI) Final Rule 40 CFR Part 312 and the terms and conditions of the Master Services Agreement between Stantec and Client (the "MSA"), except as may have been modified by the scope of work, and terms and conditions, requested by the Client. Any exceptions to, or deletions from, the ASTM practice are described in Section 2.3. In the event of any conflict between the terms and conditions of this report and the terms and conditions of the MSA, the MSA shall control.

The Property consists of approximately 2.45 acres of vacant land. The Property was previously developed with a convalescent hospital. The surrounding area is a mixture of commercial and residential properties. A Property location map is illustrated on Figure 1. A Property Vicinity Plan illustrating the main features of the Property is provided as Figure 2. Photographs taken during the site reconnaissance visit are provided in Appendix A.

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM E-1527-13 (and Final Rule 40 CFR Part 312 *et seq*.) with respect to the Property. Any exceptions to, or deletions from this practice are described in the Data Gaps section of this report. This assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the Property except for the following:

- **Historical Agricultural Use.** Based on review of historical documents including aerial photographs and topographic maps, the Property appears to have been used for light agricultural use until circa 1950. Historical agricultural use is considered a REC to the Property. Accordingly, Stantec recommends performing a shallow soil assessment at the Property to evaluate whether residual pesticides or heavy metals associated with historical herbicide applications are present above regulatory screening levels, human health risk criteria or California hazardous waste levels.

The preceding summary is intended for informational purposes only. Reading of the full body of this report is recommended.

2.0 INTRODUCTION

The objective of this Phase I ESA was to perform appropriate inquiry into the past ownership and uses of the Property consistent with good commercial or customary practice as outlined by the ASTM "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process", Designation E1527-13. The purpose of this Phase I ESA was to identify adverse environmental conditions including recognized environmental conditions ("RECs") at the Property.

The ASTM E1527-13 standard indicates that the purpose of the Phase I ESA is to identify RECs, including historical recognized environmental conditions ("HRECs"), and controlled recognized environmental conditions ("CRECs") that may exist at a property. The term "recognized environmental conditions" means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property:

(1) Due to any release to the environment;

(2) Under conditions indicative of a release to the environment; or

(3) Under conditions that pose a material threat of a future release to the environment.

ASTM defines a "HREC" as a REC that has occurred in connection with the property, but has been addressed to the satisfaction of the applicable regulatory authority and meets unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a HREC, the environmental professional must determine whether the past release is a REC when the current Phase I ESA is conducted (for example, if there has been a change in the regulations). If the EP considers the past release to be a REC at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a REC.

ASTM defines a "CREC" as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), but with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

De minimis conditions are not RECs. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. As indicated, the term REC does not include *de minimis* conditions, which generally do not present a material risk to human health

and would not likely be subject to enforcement action if brought to the attention of governmental agencies.

The scope of work conducted during this Phase I ESA consisted of a visual reconnaissance of the Property, interviews with key individuals, and a review of reasonably ascertainable documents. The scope of work did not include an assessment for environmental regulatory compliance of any facility ever operated at the Property (past or present), or sampling and analyzing of environmental media. Stantec was not contracted to perform any independent evaluation of the purchase or lease price of the Property and its relationship to current fair market value. The conclusions presented in this ESA report are professional opinions based on data described herein. The opinions are subject to the limitations described in Section 2.3.

ASTM E1527-13 notes that the availability of record information varies from source to source. The User or Environmental Professional is not obligated to identify, obtain, or review every possible source that might exist with respect to a property. Instead, ASTM identifies record information that is reasonably ascertainable from standard sources. "Reasonably ascertainable" means:

(1) Information that is publicly available;

(2) Information that is obtainable from its source within reasonable time and cost constraints; and

(3) Information that is practicably reviewable.

2.1 PROPERTY DESCRIPTION

The Property consists of approximately 2.45 acres of vacant land. The Property was previously developed with a convalescent hospital. The surrounding area is a mixture of commercial and residential properties. A Property location map is illustrated on Figure 1. A Property Vicinity Plan illustrating the main features of the Property is provided as Figure 2. Photographs taken during the site reconnaissance visit are provided in Appendix A.

The Assessor's Parcel Number (APN) for the Property is 6161-001-902.

2.2 SPECIAL TERMS, CONDITIONS, AND SIGNIFICANT ASSUMPTIONS

There were no special terms, conditions, or significant assumptions associated with this Phase I ESA.

2.3 EXCEPTIONS AND LIMITING CONDITIONS

This report documents work that was performed in accordance with the Master Services Agreement between Stantec and Client (the "MSA") and the requirements of ASTM E 1527-13

and AAI. No other representations, warranties or guarantees are made concerning the accuracy or completeness of the data or conclusions contained within this report.

This report provides an evaluation of specified environmental conditions associated with the identified property that was assessed at the time the work was conducted and is based on information obtained by and/or provided to Stantec at that time. 40 CFR 312.20(f)(2) requires that the Environmental Professional evaluate the thoroughness and reliability of provided information. Stantec can neither warrant nor guarantee such thoroughness or reliability, however.

Conclusions made within this report consist of Stantec's professional opinion as of the time of the preparation of this report, and are based solely on the scope of work described in the report, the limited data available and the results of the work. They are not a certification of the property's environmental condition. Project Specific limiting conditions are provided in Section 2.2.

The conclusions are based on the site conditions encountered by Stantec at the time of the work. Accordingly, additional studies and actions may be required. The identification of non-environmental risks to structures or people on the Property is beyond the scope of this assessment.

This report has been prepared for the exclusive use of the client identified herein and any use of or reliance on this report by any third party is prohibited, except as may be consented to in writing by Stantec or as required by law or the MSA. The provision of any such consent is at Stantec's sole and unfettered discretion and will only be authorized pursuant to the conditions of Stantec's standard form reliance letter. Stantec assumes no responsibility for losses, damages, liabilities, or claims, howsoever arising, from third party use of this report.

Stantec specifically disclaims any responsibility to update the conclusions in this report if new or different information later becomes available or if the conditions or activities on the property subsequently change. In the event of any conflict between the terms and conditions of this report and the terms and conditions of the MSA, the MSA shall control.

2.4 PERSONNEL QUALIFICATIONS

This Phase I ESA was conducted by, or under the supervision of, an individual that meets the ASTM definition of an Environmental Professional (EP). The credentials of the EP and other key Stantec personnel involved in conducting this Phase I ESA are provided in Appendix B.

3.0 USER-PROVIDED INFORMATION

ASTM E1527-13 describes responsibilities of the User to complete certain tasks in connection with the performance of "All Appropriate Inquiries" into the Property. The ASTM standard requires that the Environmental Professional request information from the User on the results of those tasks because that information can assist in the identification of RECs, CRECs, HRECs, or *de minimis* conditions in connection with the Property. Towards that end, Stantec requested that the User provide the following documents and information:

Description of Information	Provided (Yes / No)	Description and/or Key Findings
User Questionnaire	Yes	Stantec was provided a User Questionnaire form completed by Ms. Kim Prijatel, Vice President of Development of City Ventures, dated April 12, 2018. Ms. Prijatel is not aware of any environmental issues associated with the Property.
Environmental Liens or Activity Use Limitations	No	Recorded title records or search results for any environmental liens or activity and use limitations encumbering the Property or in connection with the Property were not reviewed as part of this Phase I ESA. The lack of review of this information did not appear to affect the Environmental Professional's ability to identify RECs, HRECs, or de minimis conditions and does not represent a significant data gap.
Previous Environmental Permits or Reports Provided by User	No	No previous reports or permits were provided for the Property.
Purpose of the Phase I ESA	Yes	Due Diligence

Stantec forwarded the ASTM recommended User Questionnaire to Ms. Prijatel, Vice President of Development for City Ventures. The completed User Questionnaire returned to Stantec by Ms. Prijatel is included in Appendix C. The significant information provided by the user is summarized below.

1. Information on Environmental Cleanup Liens on Subject Property? **No**
2. Information on Subject property Activity or Use Limitations (including Institutional and Engineering Controls)? **No**
3. Specialized knowledge or experience of the User: **No**
4. Relationship of the purchase price/rent to fair market value of the Subject Property if it were not contaminated? **Does not believe purchase price has been reduced from fair market value.**

5. Commonly known or reasonably ascertainable information about the Subject Property? **The Property is a trucking location with the potential for oil and gas usage.**
6. The degree of obviousness or the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation? **None.**

3.1 SPECIALIZED KNOWLEDGE OR EXPERIENCE

The Federal AAI rule (40 CFR §312.28) and ASTM E1527-13 require that all appropriate inquiry must take into account relevant and applicable specialized knowledge and experience on the part of the User regarding the Site, the area surrounding the Site, the conditions of adjoining properties, and any other experience relevant to identifying RECs on the Site.

Ms. Prijatel is familiar with the Site and knows of no RECs associated with the Site.

3.2 PURCHASE PRICE VS. PROPERTY VALUE

The Federal AAI rule (40 CFR §312.29) and ASTM E1527-13 require that persons seeking defense to or protection from liability under CERCLA must take into account the relationship of the purchase price to the fair market value of the property if it were not contaminated to assess whether or not the differential is due to the presence of releases or threatened releases of hazardous substances. This portion of the inquiry is the responsibility of the User, and the User has the option of sharing or not sharing this information with the Environmental Professional performing the Phase I ESA.

Stantec has not performed an independent evaluation of the purchase price of the property and its relationship to fair market value. Stantec submitted a written questionnaire to the User inquiring about the User's knowledge regarding the relationship of the purchase price to the fair market value of the property if it were not contaminated.

Ms. Prijatel believes the purchase price reflects fair market value and has not been reduced due to any environmental issues.

The User provided information is included in Appendix C.

4.0 RECORDS REVIEW

The objective of consulting historical sources of information is to develop the history of the Property and surrounding area, in order to evaluate if past uses may have resulted in RECs. Physical setting records are evaluated to determine if the physical setting may have contributed to adverse environmental conditions in connection with the Property. During the review of historical records, Stantec attempted to identify uses of the Property from the present to the first developed use of the Property. Stantec's research included the reasonably ascertainable and useful records described in this section.

4.1 PHYSICAL SETTING

A summary of the physical setting of the Property is provided in the table below with additional details in the following subsections

Topography:	The Property is relatively flat at an elevation of approximately 82 feet above mean sea level (msl) with a general regional topographic gradient to the east-northeast.
Soil/Bedrock Data:	According to data presented in Adanta Inc's *Supplemental Soil Sampling Report* dated July 13, 2017 for the Hooper's Carpet located approximately 130 feet to the northwest, subsurface conditions in the Property vicinity consist of brown sandy clay and clay to approximately 10 feet below ground surface (bgs) underlain by silty sand and sandy silt to approximately 66.5 feet bgs, maximum depth advanced.
Estimated Depth to Groundwater/ Estimated Direction of Gradient:	According to data presented in Central Congregation of Jehovah's Witnesses Semi-Annual Groundwater Monitoring Report 2nd Half 2017 located at 1914 West Compton Boulevard, depth to groundwater in the Property vicinity was reported between 36.59 to 45.26 feet bgs with a groundwater flow direction to the northwest.
Note: Site-specific groundwater direction and depth can only be determined by conducting site-specific testing, which Stantec has not conducted.	

4.1.1 Property Topography and Surface Water Flow

The Property is relatively flat at an elevation of approximately 82 feet above mean sea level (msl) with a general regional topographic gradient to the east-northeast. Based on the topography, surface water on the Property infiltrates the ground surface or flows toward Compton Boulevard. At the time of the site inspection, Stantec observed no improper discharge from the Property.

The nearest surface water body is a creek known as San Gabriel River, located approximately ½ mile to the east of the Property.

4.1.2 Regional and Property Geology

The Property is located in Los Angeles County. The area is located within the Peninsular Ranges Geomorphic Province, which includes northwest-southeast trending mountain ranges and valleys that have been developed by the San Andreas Fault system (California Geological Survey ["CGS"], 2002). The vicinity consists of recent-age alluvium (CDMG, 1962). Soil at a facility 1,500 feet to the west is reportedly sand (Geotracker, 2015).

According to data presented in Adanta Inc's *Supplemental Soil Sampling Report* dated July 13, 2017 for the Hooper's Carpet located approximately 130 feet to the northwest, subsurface conditions in the Property vicinity consist of brown sandy clay and clay to approximately 10 feet below ground surface (bgs) underlain by silty sand and sandy silt to approximately 66.5 feet bgs, maximum depth advanced.

4.1.3 Regional and Property Hydrogeology

The Property is located within the Coastal Plain of Los Angeles Groundwater Basin, Central Subbasin (4-11.04). The basin is located within the southeastern portion of Los Angeles County. The basin is constrained by the La Brea high to the north, bedrock core complexes to the northeast and east, a drainage province boundary to the southeast, and the Newport-Inglewood Fault to the southwest. Two forebays and one pressure area are present in the basin and water-bearing units consist of sand, gravel and clay up to 2,200 feet in thickness (Department of Water Resources [DWR], 2004).

According to data presented in Central Congregation of Jehovah's Witnesses Semi-Annual Groundwater Monitoring Report 2nd Half 2017 located at 1914 West Compton Boulevard, depth to groundwater in the Property vicinity was reported between 36.59 to 45.26 feet bgs with a groundwater flow direction to the northwest.

4.2 FEDERAL, STATE AND TRIBAL ENVIRONMENTAL RECORDS

A regulatory agency database search report was obtained from Environmental Data Resources Inc. (EDR), a third-party environmental database search firm. A complete copy of the database search report, including the date the report was prepared, the date the information was last updated, and the definition of databases searched, is provided in Appendix D.

Stantec evaluated the information listed within the database relative to potential impact to the Property, assessing the potential for impacts based in part on the physical setting. As part of this process, inferences have been made regarding the likely groundwater flow direction at or near the Property. As described in 4.1.3, the inferred groundwater flow direction is likely to be

northwest direction. Observations about the Property and surrounding properties made during the Property reconnaissance are provided in more detail in Section 5.

4.2.1 Listings for Property

The Property was identified in the environmental database report. The following table summarizes the listing for the Property:

Listed Facility Name/Address	Database Listing	Distance/Direction from Property	REC? (YES / NO)
Office of State Wide Health Planning & Development 930 W Compton Boulevard Compton, CA 90220	HAZNET	Target Property	No
The Property is listed as disposing of polychlorinated biphenyls (PCBs), material containing PCBs, and asbestos off-site in 2004. This is likely during the building demolition activities. There are no violations related to the off-site disposal of the waste. Given there were no violations listed, the database listings are considered unlikely to represent an environmental condition to the Property.			

4.2.2 Listings for Nearby Sites with Potential to Impact Property

Stantec assessed data presented in the environmental agency database search report to evaluate the potential for conditions to pose a REC, CREC, or HREC for the Property.

Based on this evaluation, the following individual facilities were identified as the most likely potential sources of impact to the Property. The basis for why each of the following listed databases creates a REC for the property is also provided.

Listed Facility Name/Address	Database Listing	Distance/Direction from Property	REC? (YES / NO)
Excel Cleaners 913 W Compton Boulevard Compton, CA 90220	EDR Hist Cleaner	60 feet / northeast	No
This facility is listed as dry cleaner in 1962. Given the lack of any reported releases and because the facility is not adjacent to the Property, this facility is unlikely to represent an environmental concern to the Property.			
Mac S Radiator Service 929 W Compton Boulevard Compton, CA 90220	EDR Hist Auto	90 feet / north	No

Listed Facility Name/Address	Database Listing	Distance/Direction from Property	REC? (YES / NO)
This facility is listed as an auto radiator repair service in 1951. Given the lack of any reported releases and because the facility is not adjacent to the Property, this facility is unlikely to represent an environmental concern to the Property.			
Forst & Son 945 W Compton Boulevard Compton, CA 90220	EDR Hist Auto	107 feet / north	No
This facility is listed as an auto repair service in 1947. Given the lack of any reported releases and because the facility is not adjacent to the Property, this facility is unlikely to represent an environmental concern to the Property.			
Blackshire & Marshall 1011 W Compton Boulevard Compton, CA 90220	RCRA Non Gen/NLR; FINDS; ECHO	108 feet / west	No
The facility is listed as a transported of hazardous wastes with no reported violations. Given the lack of any reported releases and because the facility is not adjacent to the Property, this facility is unlikely to represent an environmental concern to the Property.			
Hooper's Carpets / Sinclair C B 1001 W Compton Boulevard Compton, CA 90220	UST; EDR Hist Auto; LUST	162 feet / west-northwest	No
The facility was listed as various gasoline and oil service stations between 1947 and 1951 and Coopers Auto general auto repair in 2010. The facility is currently a carpet shop. The facility had one 1,000-gallon motor oil underground storage tank (UST) and two 2,000-gallon gasoline USTs that were closed in-place in March 2015. The Regional Water Quality Control Board (RWQCB) granted case closure on January 25, 2018 for a release of gasoline to soil. Given the distance, media involved, and closure status, this facility is unlikely to represent an environmental concern to the Property.			

The remaining listings in the database search report provided in Appendix D do not constitute a REC for the property.

4.3 LOCAL/REGIONAL ENVIRONMENTAL RECORDS

Stantec checked the following sources to obtain information pertaining to Property use and/or indications of RECs in connection with the Property. Copies of responses from the regulatory agencies is provided in Appendix F.

4.3.1 Local Health Department

Agency Name Contact Information	Finding
Los Angeles County Department of Public Health (DPH) 5555 Ferguson Drive, Suite 120-04 Commerce, CA 90022	Stantec submitted a request to the Los Angeles County DPH on April 10, 2018. As of the date of this report no response has been received. In the event that records become available that change the conclusions of this report, Stantec will issue an addendum summarizing those conclusions. Based on its review of other sources, however, Stantec considers it unlikely that any records from this agency would alter the conclusions or recommendations of this report. The lack of this information does not represent a significant data gap.

4.3.2 Department of Toxic Substances Control (DTSC)

Agency Name Contact Information	Finding
Department of Toxic Substances Control (DTSC) 5796 Corporate Ave., Cypress, CA 90630	Stantec submitted a records request for the Property by facsimile to this agency on April 10, 2018. As of the date of this report no response has been received. In the event that records become available that change the conclusions of this report, Stantec will issue an addendum summarizing those conclusions. Based on its review of other sources, however, Stantec considers it unlikely that any records from this agency would alter the conclusions or recommendations of this report. The lack of this information does not represent a significant data gap. Additionally, Stantec researched the online database Envirostor managed by this agency (envirostor.dtsc.ca.gov). No records were found on the database website for the Property address.

4.3.3 Local Building and/or Planning Department Records

Agency Name, Contact Information	Findings
City of Compton Building and Safety Division 205 S. Willowbrook Avenue Compton, CA 90220 Tel: (310) 605-5509	A request was submitted to the City of Compton Building and Safety Division on April 11, 2018. As of the date of this report no response has been received. In the event that records become available that change the conclusions of this report, Stantec will issue an addendum summarizing those conclusions. Based on its review of other sources, however, Stantec considers it unlikely that any records from this agency would alter the conclusions or recommendations of this report. The lack of this information does not represent a significant data gap.

4.3.4 County Public Works Department

Agency Name Contact Information	Finding
Los Angeles County Department of Public Works (DPW) Environmental Programs Division UST Program 900 South Fremont Avenue, 3rd Floor Alhambra, California Tel: (626) 458-3517 http://ladpw.org/epd/CleanLA/OpenFileReview.aspx	According to an email dated April 11, 2018, from Mr. David Coscia, Program Manager II with the Los Angeles County Department of Public Works, there are no records for the Property. Additionally, Stantec researched the online database managed by this agency (http://ladpw.org/epd/CleanLA/OpenFileReview.aspx). No records were found on the database website for the Property. Stantec also research the Solid Waste Management System database managed by this agency (https://dpw.lacounty.gov/epd/swims/OnlineServices/search-methane-hazards-esri.aspx) to determine if methane mitigation is required for the Property. According to this database, the Property is not within 300 feet of an oil or gas well or within 1,000 feet of a methane producing site. Therefore, this agency does not require a methane mitigation system for future Property structures.

4.3.5 Fire Department

Agency Name Contact Information	Finding
County of Los Angeles Fire Department Health Hazardous Materials Division 5825 Rickenbacker Road Commerce, CA 90040 Tel: (323) 890-4045	Stantec submitted a records request for the Property by facsimile to this agency on April 10, 2018. As of the date of this report no response has been received. In the event that records become available that change the conclusions of this report, Stantec will issue an addendum summarizing those conclusions. Based on its review of other sources, however, Stantec considers it unlikely that any records from this agency would alter the conclusions or recommendations of this report. The lack of this information does not represent a significant data gap.

4.3.6 California Regional Water Quality Control Board (CRWQCB)

Agency Name, Contact Information	Findings
California State Water Resources Control Board, Los Angeles (CRWQCB) 320 W 4th Street, Suite 200 Los Angeles, CA 90013 (213) 576-6600	Stantec researched the online database Geotracker managed by this agency (geotracker.waterbarods.ca.gov). No records were found on the database website for the Property address.

4.4 HISTORICAL RECORDS REVIEW

4.4.1 Land Title Records/Deeds

Land title records and deeds were not provided by the User, and public records were not searched by Stantec.

4.4.2 Aerial Photographs

Stantec reviewed historical aerial photographs provided by EDR. The general type of activity on a property and land use changes can often be discerned from the type and layout of structures visible in the photographs. However, specific elements of a facility's operation usually cannot be discerned from aerial photographs alone. The following table summarizes Stantec's observations of the reviewed historical aerial photographs.

Year	Scale	Observations, Property, and Adjoining Properties
1928	1": 500'	The Property and adjacent land to the south appear to be used for light agricultural purposes. Compton Boulevard appears adjacent to the north beyond which are small structures. Dwight Avenue appears adjacent to the west.
1938	1": 500'	The Project and surrounding area appear similar to the previous aerial photograph.
1947	1": 500'	The Project and surrounding area appear similar to the previous aerial photograph. An increase in residential development appears to the north and south. The Compton Airport appears approximately 1,000 feet to the south.
1952	1": 500'	The Property appears to be vacant land. Residential development appears to the south. Kemp Avenue appears adjacent to the east. An increase in residential development appears in the surrounding area.
1963	1": 500'	The Project and surrounding area appear similar to the previous aerial photograph.
1977	1": 500'	The majority of the Property is developed with a large structure possibly a hospital. The western and southern portion of the property appears to be parking. The surrounding properties appears densely developed with residential structures.
1979	1": 500'	The Project and surrounding area appear similar to the previous aerial photograph.
1981	1": 500'	The Project and surrounding area appear similar to the previous aerial photograph. Commercial properties appear to the north beyond Compton Boulevard.
1989	1": 500'	The Property appears similar to the previous aerial photograph. The adjacent parcel to the east appears to be a vacant lot.
1994	1": 500'	The Property appears similar to the previous aerial photograph.
2002	1": 500'	The Property appears similar to the previous aerial photographs. The adjacent property to the east appears to be developed with multi-tenant residential structures.
2005	1": 500'	The Property appears to be a vacant lot. All structures and parking areas have been removed. The surrounding area appears similar to the previous aerial photographs.
2010 / 2012	1": 500'	The Property and surrounding area appears similar to the previous aerial photographs.

Name of aerial photograph source: EDR, 2018

The Property appears to have been used for light agricultural use until circa 1950. A large commercial building, possibly a hospital building, appears on the Property between 1977 and 2005. The building on the Property was demolished and remains a vacant lot at present day. Historical agricultural use is considered a REC to the Property. Accordingly, Stantec recommends performing a shallow soil assessment at the Property to evaluate whether residual pesticides or heavy metals associated with historical herbicide applications are present above regulatory screening levels, human health risk criteria or California hazardous waste levels.

4.4.3 City Directories

Stantec retained EDR to research available reverse city directories for the Property, in approximately five year intervals for the years spanning 1920 through 2014. The following is a summary of Stantec's review of the city directory listings:

Subject/Adjoining Property	Year	Listed Occupants
Subject Property: 930 W Compton Boulevard	1995	Kazi Residential Drug Program
Subject Property: 930 W Compton Boulevard	1980	Compton Care Inc
Subject Property: 930 W Compton Boulevard	1976	Willows Resident School & Day Care Center
Subject Property: 930 W Compton Boulevard	1971	Willows Convalescent Hospital

Name of city directories and source: Cole Information Services and Haines Criss-Cross Directory.

4.4.4 Historical Fire Insurance Maps

Fire insurance maps were developed for use by insurance companies to depict facilities, properties, and their uses for many locations throughout the United States. These maps provide information on the history of prior land use and are useful in assessing whether there may be potential environmental contamination on or near the Property. These maps, which have been periodically updated since the late 19th century, often provide valuable insight into historical Property uses.

Stantec contracted with a third party to search for copies of historical fire insurance maps covering the subject and immediately adjacent properties. The Sanborn® Map Search Report is presented in Appendix E.

Year	Occupant of Property/Adjoining Properties; Indications of Hazardous Substance or Petroleum Usage
1938	The Property is not depicted on the Sanborn Map. West Compton Boulevard appears adjacent to the north beyond which are dwellings. The El Retiro Psychopathic Ward with dormitories and an administration building appear adjacent to the east.

Name of maps and source: EDR, 2018

4.4.5 Historical Topographic Maps

Stantec reviewed historical USGS 7.5-Minute Topographic Maps of the South Gate, Inglewood, Long Beach, and Torrance, California Quadrangles (scale 1:24,000) to help identify past Property usage and areas of potential environmental concern. Copies of the historical maps are provided in Appendix E. The following table summarizes the maps reviewed and our observations.

Year	Scale	Observations, Property and Adjoining Properties
1896 / 1899 / 1902	1:62,500	The map is large scale of the area in the vicinity of the Property. No structures or other features are observable on the Property from this map. A creek appears adjacent to the north-east.
1923 / 1924; 1930	1:24,000	No structures or other features are observable on the Property. The Compton Sanitarium appears adjacent to the east. Redondo Boulevard appears adjacent to the north.
1937	1:24,000	The Property is not located on this map.
1942; 1943; 1947/1948	1:62,500 1:50,000	No structures are observable on the Property from this map. The city of Compton appears to the northeast. Compton Creek appears to the north-east.
1949/1950/1951; 1952; and 1964	1:24,000	No structures are observable on the Property from this map. Multiple buildings associated with the Compton Sanitarium appear adjacent to the east.
1972 and 1981	1:24,000	The Property and surrounding area appear similar to the previous topographic map. No structures are present on the Property.
2012	1:24,000	No site detail is shown on this map.

Name of maps and source: EDR, 2018.

4.4.6 Other Historical Sources

Stantec was not provided with any historical reports for the Property.

5.0 SITE RECONNAISSANCE

A visit to the Property and its vicinity was conducted by Ms. Alicia Jansen, Associate Scientist with Stantec on April 20, 2018. Access to the Property was provided by Ms. Kim Prijatel, Vice President of Development of City Ventures. Stantec was unaccompanied during the Property visit. Figure 2 provides information about the Property and adjoining properties and the location of potential areas of environmental concern. Photographs collected during the Property visit are included in Appendix A.

5.1 SITE RECONNAISSANCE METHODOLOGY

The site reconnaissance focused on observation of current conditions and observable indications of past uses and conditions of the Property that may indicate the presence of RECs. The reconnaissance of the Property was conducted on foot and Stantec utilized the following methodology to observe the Property:

- Traverse the outer Property boundary.
- Traverse transects across the Property.

Weather conditions during the visit to the Property were clear and sunny. There were no weather related Property access restrictions encountered during the reconnaissance visit.

5.2 GENERAL DESCRIPTION

Property and Area Description:	The Property is located southeast corner of the intersection of West Compton Boulevard and South Dwight Avenue in the City of Compton, Los Angeles County, California. The surrounding area is a mixture of commercial, retail, restaurants, and residential properties.
Property Operations.	None observed.
Structures, Roads, Other Improvements:	The Property is consists of a vacant lot with no structures or roads present. The Property is surrounded by a locked fence.
Property Size (acres):	Approximately 2.45 acres.
Estimated % of Property Covered by Buildings and/or Pavement:	0%
Observed Current Property Use/Operations:	The Property is consists of a vacant lot with no structures or roads present.
Observed Evidence of Past Property Use(s):	None observed.

Sewage Disposal Method (and age):	City of Compton.
Potable Water Source:	City of Compton.
Electric Utility:	Southern California Edison.

5.3 HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS

The following table summarizes Stantec's observations during the Property reconnaissance.

Observations	Description/Location
Hazardous Substances and Petroleum Products as Defined by CERCLA 42 U.S.C. § 9601(14):	None observed.
Drums (≥ 5 gallons):	None observed.
Strong, Pungent, or Noxious Odors:	None detected.
Pools of Liquid:	None observed.
Unidentified Substance Containers:	None observed.
PCB-Containing Equipment:	None observed.
Other Observed Evidence of Hazardous Substances or Petroleum Products:	None observed.

5.4 INTERIOR OBSERVATIONS

Given there were no structures on the Property this section is not applicable.

Observations	Description
Heating/Cooling Method:	N/A
Surface Stains or Corrosion:	N/A
Floor Drains and Sumps:	N/A
Other Interior Observations:	N/A

5.5 EXTERIOR OBSERVATIONS

Stantec made the following observations during the site reconnaissance of exterior areas of the Property and/or identified the following information during the interview or records review portions of the assessment:

Observations	Description
On-site Pits, Ponds, or Lagoons:	None observed.
Stained Soil or Pavement:	None observed.
Stressed Vegetation:	None observed.
Waste Streams and Waste Collection Areas:	Household debris (furniture, dresser, headboard, etc) were observed outside the fenced gate on the southwestern corner of the Property.
Solid Waste Disposal:	None observed.
Potential Areas of Fill Placement:	None observed.
Wastewater:	None observed.
Stormwater:	Surface water infiltrates the ground surface or flows toward Compton Boulevard. At the time of the site inspection, Stantec observed no improper discharge from the Property.
Wells:	None observed.
Septic Systems:	None observed.
Other Exterior Observations:	An unlabeled aboveground pipe was observed along the southcentral perimeter within the Property boundary.

5.6 UNDERGROUND STORAGE TANKS/STRUCTURES

Existing USTs:	No visible evidence (fill pipes, vent pipes, dispensers, surface patches) which would indicate the presence of USTs was discovered during the site reconnaissance.
Former USTs:	No visible evidence (fill pipes, vent pipes, dispensers, surface patches), reports, or other evidence of the former presence of USTs was discovered during this Phase I ESA.
Other Underground Structures:	None observed or reported to Stantec.

5.7 ABOVEGROUND STORAGE TANKS (AST)

Existing ASTs:	No visible evidence (fill pipes, vent pipes, dispensers, surface patches), reports, or other evidence of the presence of ASTs was discovered during this Phase I ESA.
Former ASTs:	None observed or reported to Stantec.

5.8 ADJOINING PROPERTIES

5.8.1 Current Uses of Adjoining Properties

As viewed from the Property and/or from public rights-of-way, Stantec made the following observations about use and activities on adjoining properties:

NORTH	West Compton Boulevard beyond which are retail, restaurants and commercial businesses.
SOUTH	West 151st Street beyond which are residential structures
EAST	South Kemp Avenue beyond which are residential structures
WEST	South Dwight Avenue beyond which are a liquor store and residential structures

5.8.2 Observed Evidence of Past Uses of Adjoining Properties

Observations of adjoining properties providing indications of past use and activities, if any, are described below.

NORTH	None observed.
SOUTH	None observed.
EAST	None observed.
WEST	None observed.

5.8.3 Pits, Ponds or Lagoons on Adjoining Properties

As viewed from the Property and/or from public rights-of-way, Stantec made the following observations about the presence of pits, ponds and lagoons on adjoining properties:

NORTH	None observed.
SOUTH	None observed.
EAST	None observed.
WEST	None observed.

5.9 OBSERVED PHYSICAL SETTING

Topography of the Property and Surrounding Area:	The Property is relatively flat at an elevation of approximately 82 feet above mean sea level (msl) with a general regional topographic gradient to the east-northeast.

6.0 INTERVIEWS

The Property was vacant at the time of the site reconnaissance; therefore, no site interview was conducted. Given the historical records available, the lack of an on-site interview is not considered a significant data gap and is unlikely to impact the conclusions of this report.

7.0 EVALUATION

This section provides a summary overview of Findings, Opinions, and Conclusions.

7.1 FINDINGS AND OPINIONS

Information gathered from interviews, reviews of existing data, and a property inspection was evaluated to determine if RECs are present in connection with the Property. Based on this information, Stantec made the following findings and developed the following opinions.

Finding 1: Based on review of historical documents including aerial photographs and topographic maps, the Property appears to have been used for light agricultural use until circa 1950. Historical agricultural use is considered a REC to the Property.

Opinion 1: Stantec recommends performing a shallow soil assessment at the Property to evaluate whether residual pesticides or heavy metals associated with historical herbicide applications are present above regulatory screening levels, human health risk criteria or California hazardous waste levels.

Finding 2: An environmental records search was performed and identified sites within their respective ASTM E 1527-13 search radii of the Property that may represent RECs, HRECs, or de minimis conditions.

Opinion 2: Based on one or more of the following reasons: distance from the Property, position of sites with respect to assumed groundwater flow direction, the native soils, and regulatory status, none of the sites identified in the in the environmental records search report are expected to affect soil or groundwater quality at the Property. The environmental records search identified no RECs, HRECs or de minimis conditions at or near the Property.

Finding 3: Recorded title records and search results for environmental liens or activity and use limitations encumbering the Property or in connection with the Property were not reviewed as part of this Phase I ESA.

Opinion 3: The lack of review of this information did not affect the Environmental Professional's ability to identify RECs, HRECs, or de minimis conditions and does not represent a significant data gap.

7.2 DATA GAPS

The federal AAI rule [40 CFR 312.10(a)] and ASTM E1527-13 identify a "data gap" as the lack or inability to obtain information required by the standards and practices of the rule despite good faith efforts by the Environmental Professional or the User.

Any data gaps resulting from the Phase I ESA described in this report are listed and discussed below.

Gap	Discussion
Deletions or Exceptions From Scope of Work Referenced in Section 1.4:	None
Weather-Related Restrictions To Site Reconnaissance:	None
Facility Access Restrictions to Site Reconnaissance:	None
Other Site Reconnaissance Restrictions:	None
Data Gaps From Environmental Records Review:	As of the date of this report no response has been received from multiple environmental agencies. In the event that records become available that change the conclusions of this report, Stantec will issue an addendum summarizing those conclusions. Based on its review of other sources, however, Stantec considers it unlikely that any records from the multiple environmental agencies would alter the conclusions or recommendations of this report.
Data Gaps From Historical Records Review:	None
Data Gaps From Interviews:	None
Other Data Gaps:	None

7.3 CONCLUSIONS AND RECOMMENDATIONS

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM E-1527-13 (and Final Rule 40 CFR Part 312 et seq.) with respect to the Property. Any exceptions to, or deletions from this practice are described in the Data Gaps section of this report. This assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the Property except for the following:

- **Historical Agricultural Use.** Based on review of historical documents including aerial photographs and topographic maps, the Property appears to have been used for light agricultural use until circa 1950. Historical agricultural use is considered a REC to the Property. Accordingly, Stantec recommends performing a shallow soil assessment at the Property to evaluate whether residual pesticides or heavy metals associated with historical herbicide applications are present above regulatory screening levels, human health risk criteria or California hazardous waste levels.

8.0 NON-SCOPE CONSIDERATIONS

No ASTM E1527-13 non-scope services were performed as part of this Phase I ESA with the following exceptions:

8.1 LEAD-BASED PAINT

Concern for lead-based paint (LBP) is primarily related to residential structures. The EPA's Final Rule on Disclosure of Lead-Based Paint in Housing (40 CFR Part 745) defines LBP as paint or other surface coatings that contain lead equal to or in excess of 1.0 milligram per square centimeter or 0.5 percent by weight.

The risk of lead toxicity in LBP varies based upon the condition of the paint and the year of its application. The U.S. Department of Housing and Urban Development (HUD) has identified the following risk factors:

The age of the dwelling as follows: maximum risk is from paint applied before 1950.

There is severe risk from paint applied before 1960.

There is moderate risk from deteriorated paint applied before 1970.

There is slight risk from the paint that is intact but applied before 1977.

The condition of the painted surfaces.

The presence of children and certain types of households in the building.

Previously reported cases of lead poisoning in the building or area.

Given there are no structures on the Property, LBP is not an environmental concern.

8.2 ASBESTOS

Asbestos can be found in many applications, including sprayed-on or blanket-type insulation, pipe wraps, mastics, floor and ceiling tiles, wallboard, mortar, roofing materials, and a variety of other materials commonly used in construction. The greatest asbestos-related human health risks are associated with friable asbestos, which is ACM that can be reduced to powder by hand pressure. Friable asbestos can become airborne and be inhaled, and has been associated with specific types of respiratory disease. The manufacturing and use of asbestos in most building products was curtailed during the late 1970s.

Stantec makes no warranty as to the possible existence or absence of inaccessible materials or to their evaluation with respect to asbestos content. Samples of suspect ACM should be collected for laboratory analysis of asbestos prior to any renovation or building demolition, in order to determine the need for compliance with EPA National Emission Standard for Hazardous Air Pollutants (NESHAP) regulations.

Given there are no structures on the Property, ACMs are not considered an environmental concern for the Property.

8.3 RADON

Radon is a colorless, tasteless radioactive gas with an EPA-specified action level of 4.0 PicoCuries per liter of air (pCi/L) for residential properties. Radon gas has a very short half-life of 3.8 days. The health risk potential of radon is primarily associated with its rate of accumulation within confined areas near or in the ground, such as basements, where vapors can readily transfer to indoor air from the ground through foundation cracks or other pathways. Large, adequately ventilated rooms generally present limited risk for radon exposure. The radon concentrations in buildings and homes depend on many factors, including soil types, temperature, barometric pressure, and building construction (EPA, 1993).

Stantec reviewed regional data published by the EPA on average indoor radon concentrations in the vicinity of the Property (http://www.epa.gov/radon/zonemap.html).

EPA Radon Zones (w/Average Measured Indoor Radon concentrations)		
Zone 1 – High (>4.0 pCi/L)	Zone 2 – Moderate (2 to 4 pCi/L)	Zone 3 – Low (<2 pCi/L)
Normally-occupied sub grade areas present? (i.e., basement apartments, offices, stores, etc.)		
None		

The property is located in Zone 2 and is considered to have moderate potential for radon. None of the 4 tests conducted in zip code 90220 (zip code for the Property) were above 4 pCi/L. To determine Property-specific radon levels, a radon survey would have to be conducted. However, based on the information available, Stantec concludes that radon appears unlikely to represent an environmental concern to the Property and recommends no further investigation regarding this issue.

8.4 FLOOD ZONES

According to the Physical Setting summary portion of the EDR report, the Property is not located within a 100-year or 500-year flood plain.

Appendix B STANTEC RESUMES

Alicia R Jansen CAC, LRCIA

Environmental Scientist

Alicia is an Associate Scientist with over ten years of experience in Phase I and II Environmental Assessments, with strong emphasis in water quality and environmental research. She is experienced in California Environmental Quality Act (CEQA) compliance and the preparation of initial studies. Alicia has managed the preparation of environmental documents, training programs, and environmental compliance during large environmental monitoring projects. Alicia's environmental consulting experience includes performing asbestos and lead-based paint surveys, oversight of contractors during asbestos abatement, hazardous materials surveys, and Phase I Environmental Site Assessments in accordance with the practices identified in the American Society for Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, ASTM Designation E 1527-13.

EDUCATION

BA, Environmental Studies, San Jose State University, San Jose, California, 2004

CERTIFICATIONS & TRAINING

Residential Measurement Provider, 108212, National Radon Proficiency Program, Anaheim, California, 2015

REGISTRATIONS

Certified Asbestos Consultant #CAC #15-5379, State of California Division of Occupational Safety and Health

Lead Related Construction Inspector Assessor #19526, California Department of Public Health

MEMBERSHIPS

Member, Groundwater Resources Association of California

PROJECT EXPERIENCE

Health, Safety & Industrial Hygiene

Confidential Health Care Company, Asbestos, Lead-Based Paint, and Hazardous Materials Survey, Northern California (Staff)

Alicia assisted with site inspections for asbestos, lead-based paint, and hazardous materials at multiple occupied hospitals and office spaces. The scope of work involved sample collection for asbestos and lead-based paint in addition to the quantification of universal wastes (PCBs, mercury containing equipment, refrigerants, etc.) that would require special handling and disposal. She assisted with the preparation of reports summarizing findings.

State of California General Services, Asbestos, Lead-Based Paint, and Hazardous Materials Survey, Northern California (Project Lead)

Alicia assisted with site inspections for asbestos, lead-based paint, and hazardous materials at multiple communication towers in remote areas. The scope of work involved sample collection for asbestos and lead-based paint in addition to the quantification of universal wastes (PCBs, mercury containing equipment, refrigerants, etc.) that would require special handling and disposal. She assisted with the preparation of reports summarizing findings.

** denotes projects completed with other firms*

Alicia R Jansen CAC, LRCST

Environmental Scientist

Indoor Air Quality Assessments*, San Jose, California (Staff)
Alicia performed site inspections, interviews, and collected air samples to be analyzed for various air pollutants and molds including formaldehyde, penicillium, aspergillus, cladosporium, and stachybotry. She prepared reports summarizing findings and made recommendations.

Veteran's Administration of Puget Sound, Asbestos and Lead-Based Paint Survey, Seattle, Washington (Project Scientist)
Alicia served as the Project Scientist responsible for hazardous building material assessments, specifically asbestos and lead-based paint. These services were required as part of the pre-design tasks for this project. Over 300 samples were collected over the span of four days culminating in a final hazardous building materials report to be incorporated into the facility design as well as demolition activities once the construction phase of the project commences.

Interim Remedial Action, Indoor Air Sampling, and Sub-Slab Soil Gas Sampling, Sunnyvale, California (Staff)
Alicia conducted an indoor air sampling survey using air sampling pumps, dosimeter badges, and flame ionization detector (FID) during a sump excavation. She performs semi-annual sub-slab soil vapor sampling and indoor air quality surveys using summa canisters. She assists with the preparation and submittal of reports summarizing the findings and provides recommendations to the RWQCB.

Lead Dust Assessment and Abatement Oversight, Fremont, California (Project Scientist)
Alicia assisted with the evaluation of lead dust in an industrial facility. A total of 307 dust wipe samples were collected in order to evaluate the potential presence of lead dust throughout the two-story, 500,000 square foot manufacturing building.

Former Tesoro Coke Facility, Asbestos, Lead-Based Paint Survey, Pittsburg, California (Project Scientist)
Alicia assisted with an asbestos and lead paint survey of 20 structures at the facility ultimately scheduled for demolition. More than 200 samples were collected over the span of two days. A report was prepared that will stand up to regulatory scrutiny for demolition while providing the information needed for worker safety during demolition activities at the facility

Permitting, Compliance, Auditing

Tesoro Refinery, Initial Study*, Benicia, California (Staff)
Alicia assisted with the background research and preparation of applicant-prepared initial study for the upgrade of a refinery.

Transmission Line Upgrade*, San Mateo to San Francisco, California (Staff)
Alicia supported the environmental compliance program for the construction of a 27-mile 230 kV underground and overhead transmission line. She assisted with the preparation and submittal of variance requests, extra work space requests, and daily and weekly reports for submittal to the California Public Utilities Commission. She also conducted research and assisted with training and report preparation.

** denotes projects completed with other firms*

Alicia R Jansen CAC, LRCST

Environmental Scientist

Remedial Investigations & Assessments

Multiple Confidential Clients, Phase I Environmental Site Assessments (ESA), Multiple Sites, California (Project Lead)

Alicia performs Phase I ESA in accordance with the practices identified in the American Society for Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, ASTM Designation E 1527-13 to achieve compliance with requirements of the "All Appropriate Inquiries" rule required to obtain protection from liability under the federal Comprehensive Environmental Response, Cleanup and Liability Act (CERCLA). Previous sites include large industrial warehouses, multi-tenant commercial buildings, and residential properties. She reviews topographic maps, Sanborn Fire Insurance Maps, and files at local regulatory agencies. She interviews present and former property owners and performed site and adjacent property reconnaissance. She prepares reports summarizing the findings and provides recommendations for further assessment if applicable.

California Department of Transportation Portfolio, Multiple Sites, Northern California (Project Lead)

Alicia prepared quarterly groundwater monitoring reports, subsurface investigation reports, sensitive receptor surveys, and preferential pathway studies for various California Department of Transportation locations throughout northern California. She assisted with the utility locating, work plan preparation, field coordination, archived data onto the State Water Resource Control Board's (RWQCB) Geotracker electronic filing system.

Homebuilder, Soil Gas Sampling and Human Health Risk Assessment, San Jose, California (Project Lead)

Alicia performed a soil vapor survey in conformance with the DTSC, Advisory Active Soil Gas Investigations, using a low-dead volume soil vapor sampling device and a mobile laboratory for onsite chemical analysis. She also assisted with the report preparation summarizing the findings and providing recommendations for further assessment, if applicable.

Goodyear Portfolio, Northern California and Hawaii (Project Lead)

Alicia performed Phase I ESAs and Phase II Site Assessments for various Goodyear Tire & Rubber Company locations throughout California and Hawaii. She assisted with the installation of monitoring wells and exploratory borings; underground storage tank removals; site restoration; product removal with passive recovery system; archived data onto the State Water Resource Control Board's Geotracker electronic filing system; and assisted with the preparation of quarterly groundwater monitoring reports, sensitive receptor surveys, site conceptual models, and subsurface investigation reports.

** denotes projects completed with other firms*

Dion Monge

Project Scientist

Dion has extensive knowledge of underground storage tank investigations, Phase I and II environmental site assessment, groundwater monitoring and reporting, soil, soil vapor, and groundwater quality assessments, and testing for asbestos and lead based paint. His project experience is extensive and wide ranging and includes many types of soil, soil vapor, and groundwater assessment and monitoring for planned, existing, and former sites. Dion also has experience in testing fill soils placed on grading sites.

He has experience on redevelopment of former oil field sites that include submittal of construction site review plans, oil well mitigation (venting and casing alterations), abandonment of oil wells, and remedial investigations and remediation involving soil contamination.

Dion also has experience working with 1166 AQMD air monitoring on projects ranging from limited access dry cleaner excavations, solvent excavations, and petroleum excavations related to underground storage tank releases. Included in this type of monitoring is the assessment of a safe work environment for the contractors involved with this type of work.

He has considerable knowledge in asbestos and lead based paint sampling as a building inspector and lead sampling technician. Asbestos and lead based paint surveys have ranged from large office buildings to sampling highway bridges.

EDUCATION

BS, Soil Science, California Polytechnic University, Pomona, Pomona, California, 2004

Health & Safety Certification (29 CFR 1910.120),, 40-Hour OSHA Health & Safety Certification, Redlands, California, 2005

Health & Safety Annual Update Certification, 8-Hour OSHA, Redlands, California, 2009

First Aid/CPR, American Red Cross, Redlands, California, 2009

Certified Building Inspector, AHERA 8-Hour Refresher, Redlands, California, 2009

PROJECT EXPERIENCE

Asbestos, Lead Based Paint, and Hazardous Material Management

Haller Wash Bridge No. 54-0891R&L, San Bernardino County, California (Asbestos and Lead-Based Paint Sampling Assistant)

Dion conducted asbestos and lead based paint survey on highway bridge. He assisted with planning field operations, measuring bridge dimensions, and collecting samples. Tasks included sample collection, bridge measurements, and documentation.

Project Management Oversight

Magnolia Plaza, Fountain Valley, California

Dion is providing project management of soil, soil vapor, and quarterly groundwater sampling related to a solvent release at a former dry cleaning facility. Tasks include preparation of work plans for approval by the Regional Water Quality Control Board and oversight of field sampling, including lithologic logging, for soil and soil vapor investigations performed within a multi-tenant strip center. Additional tasks include preparation of investigative reports and quarterly groundwater monitoring reports. The site remains an open case and preparation of a work plan to use electrical resistive heating ("ERH") will be prepared in the coming weeks.

Dion Monge

Project Scientist

Former Superb Dry Cleaners, Anaheim, California
Dion performed field oversight, direction, and confirmation soil sampling of a limited access excavation within a former dry cleaner unit. Post excavation field activities included application of a barrier type floor sealant along with post excavation indoor air sampling. Remedial work led to regulatory closure being granted from the local agency.

Site Assessment

Proposed Friends Christian High School, Yorba Linda, California
Dion prepared preliminary site assessment (PSA) report for future private school site to identify recognized environmental conditions ("RECs") related to past property usage as an oil field with 21 oil wells abandoned prior to 1990. Completion of the PSA led to his management of the project through site closure. Field investigations and reporting by Dion included Phase II investigations, methane survey, oil well leak testing and venting, backfill and compaction (including soils testing), DOGGR Construction Site Review, and excavation and onsite management of more than 5,000 cubic yards of petroleum impacted soils.

SR-58 Widening, San Bernardino County, California
Dion performed Initial Site Assessment (ISA) for Caltran at Kramer Junction for the proposed widening of State Route 58. The ISA was performed in accordance with guidelines promulgated by the American Society for Testing and Materials (ASTM) and included historical research and coordination of permit/file reviews with local building/planning departments and environmental agencies. Dion's role included the field visit, observation documentation, agency reviews, and reporting.

Soil Sampling

Caltrans I-15, Task Order 28, Hesperia, California
Dion conducted a soil investigation for metals analysis alongside I-15 for disposal recommendations during construction of mortar-lined channels at several locations. He assisted with planning field operations and collected soil samples. Tasks included sample collection, preservation, and documentation.

** denotes projects completed with other firms*

Kyle D. Emerson PG, CEG

Managing Principal Geologist

Kyle has more than 28 years of professional experience—17 of those years with Stantec—providing geotechnical and environmental consulting. During the course of his experience, he has been involved with a wide variety of geological and engineering projects. He has been in direct charge of quality control/quality assurance (QA/QC) work for Stantec and previous firms for geological, engineering geological, and environmental services primarily in California. Additionally, Kyle has been a primary contact for Stantec with many different clients (including multi-party actions) and regulatory bodies involving contracting, workplan approvals, site assessments and closures, permitting, remedial action, and litigation support. With regard to litigation services, Kyle has extensive experience providing expert witness testimony, second-party review, and litigation support and analysis.

Kyle's extensive experience includes assessment and remediation of property-specific and regional issues involving soil and groundwater contaminated with petroleum hydrocarbons, chlorinated solvents, heavy metals, pesticides, and PCBs.

He currently serves as the managing principal geologist in Stantec's Redlands, California office.

EDUCATION

Engineering Geology/Hydrogeology, California State University, Los Angeles, California, 1984

AS, General Science, Crafton Hills College, Yucaipa, California, 1975

BS, Geological Sciences, California State University, Long Beach, California, 1982

REGISTRATIONS

Certified Engineering Geologist #1271, State of California

Professional Geologist #4066, State of California

PROJECT EXPERIENCE

Bioremediation

Excavation and Treatment of Petroleum-Contaminated Soil

Kyle designed the excavation and treatment of 45,000 cubic yards of petroleum-contaminated soil. Soil treatment included utilizing vapor extraction, combined with bioremediation.

Chemicals & Polymers

Two Former Chemical Plants, Environmental Site Assessments and Remediation, Vernon, California

Mr. Emerson was part of the team for conducting Phase I and Phase II Environmental Site Assessments (ESA) and developing remedial action plans for two former chemical plant sites with 80-year industrial histories. Phase I ESAs used historical files, maps, aerial photographs, available documents, and data from public agencies and historical directories for identifying recognized environmental concerns. Extensive Phase II ESA survey activities aided in identifying below-grade structures such as vaults/USTs, as well as assessing the extent of influence and nature of the contamination. These investigations confirmed the presence of heavy metals, petroleum hydrocarbons, volatile organic compounds, polychlorinated biphenyls, radioactive materials, semi-volatile organic compounds, and polycyclic aromatic compounds in the soils for these sites. Specific areas of concern included former settling ponds, a bone yard, maintenance areas, transformer and substations, wastewater treatment facilities, and above-ground storage tank farms. A conceptual mode was developedl for use in a health risk assessment and developed risk-based corrective actions to address potential health and environmental concerns. He assisted with the development and implementation of a remedial action plan, combined administrative controls, engineering controls, and active remediation; this resulted in the cost-effective return of one site to active use, and is reducing health risks to occupants and the public at the second site.

Kyle D. Emerson PG, CEG

Managing Principal Geologist

CONFIDENTIAL: Aerospace Adhesives and Coatings Plant, Glendale, California

Mr. Emerson was part of the team that conducted feasibility studies to evaluate remedial alternatives for remediation of chlorinated VOCs, 1,4 dioxane, and hexavalent chromium (CrVI) in soil, soil vapor, and groundwater. Feasibility studies included groundwater pump testing, benchscale column testing to evaluate in situ alternatives for reducing CrVI to the less mobile CrIII valence state, soil vapor extraction, capping, and excavation. Field pilot studies were performed to evaluate the efficiency of various CrVI reductants including the use of ferrous sulfate, calcium polysulfide, emulsified oil, and fructose. Extensive multi-depth soil vapor testing was conducted to evaluate the distribution of VOCs in the subsurface and to support vapor intrusion risk assessment. Feasibility studies were completed in 2008. Remedial actions are expected to be completed in 2011.

Condition Assessments

Assessment and Mitigation of Manufacturing Facility

Kyle managed the assessment and mitigation of an ammunition manufacturing facility covering 1,100 acres in a complex geologic environment. The contaminates involved red and white phosphorous, TNT, chlorinated solvents, solid wastes, and live ordinance.

Soil Contamination Assessment Supervision and Management

Kyle managed and supervised soil contamination assessment and in-situ remediation of heavy metals involving chromium, cadmium, nickel and zinc by chemical fixation to depths in excess of 40 feet below ground surface beneath existing structures within several manufacturing facilities.

Litigation Support and Expert Testimony

Kyle provided litigation support and expert testimony on more than 20 separate projects involving service stations, chlorinated solvent cases, heavy metal, and semi-volatile releases.

Corporate / Office

CT Realty Environmental Remediation of Former Dry Cleaners, El Centro, California

Mr. Emerson was responsible for assessments and remediation at this former dry cleaners which released the dry cleaning chemical tetrachloroethene (PCE) to the ground and underlying groundwater. The work included initial site assessment, agency interaction and negotiations with the California Regional Water Quality Control Board (CRWQCB), and Colorado Basin Region human health risk assessment (HHRA), design and implementation of remedial investigations, feasibility studies, remedial action plans, and implementation of remediation in mitigating chlorinated solvent contamination in vadose and saturated zones at concentrations indicative of DNAPL. The results of the completed remediation, as well as continued confirmation sampling and monitoring, allowed the CRWQCB to issue site closure in 2008. The site has since been redeveloped into a new commercial development.

Environmental Assessments

Siting Studies

Kyle performed initial siting studies for potential Class I, II, and III landfills. The project included detailed geologic mapping, hydrogeological studies, and permeability studies of caps and liners.

Environmental Site Remediation

Assessment and Remedial Design, California (Project Supervisor)

Kyle supervised the assessment and remedial design of a system to eliminate salt brine contamination in shallow perched water horizons in the Yucaipa, San Bernardino, and Riverside areas of southern California.

Design and Installation of Recovery Systems*

Kyle designed and installed numerous free-product recovery systems that successfully recovered product. One of the sites contained product up to 11-feet thick covering more than three city blocks. The dissolved phase had affected a multi-aquifer system and a public drinking water system.

Geophysical Characterizations*

Kyle performed and supervised numerous geophysical characterizations to determine the extent of old landfills. He provided classification studies, landfill gas monitoring, removal verification during grading, methane collection and mitigation plans, permitting, and closure plans.

** denotes projects completed with other firms*

Kyle D. Emerson PG, CEG

Managing Principal Geologist

Domestic Landfill Development*

Kyle designed and supervised the dynamic consolidation of a domestic landfill for development. He used this process to minimize expected settlement to overlying structures. Kyle designed commercial developments on closed landfills that involved complex methane collection and monitoring systems and building settlement controls.

Clay Borrow Site Studies

Kyle performed more than 10 separate clay borrow site studies for determining sources of material to cap landfills; ranged from a 20-acre dry lakebed to a 450-acre parcel in complex folded marine sediments.

Assessment, Clean Up, and Regulatory Support Management, Santa, Monica (Project Manager)

Kyle managed the assessment, clean up, and complex regulatory support of a PRP site in an MTBE case (Charnock subbasin). His work involved more than 20 environmental professionals working full time for two years to complete the assessment and clean up mandated by the regulatory agencies.

Hazardous Waste

San Gabriel Valley Superfund Site, Remediation & Closure of Multiple Source Areas, Industry, California

Mr. Emerson performed feasibility studies to evaluate appropriate and relevant remedial alternatives to mitigate constituents of concern in five AOCs contaminated with chlorinated hydrocarbons, heavy metals, petroleum fuel, and cutting oils. Ultimately, a combination of remedial alternatives was implemented that included large-diameter auger excavation to 45 feet to minimize impacts on facility operations, vapor extraction, vapor intrusion risk assessment, deed restriction, and monitored natural attenuation. At the completion of remedial actions, confirmation soil, soil vapor, and groundwater sampling were conducted and followed with risk assessment to demonstrate that remedial objectives had been achieved. No further action was recently granted by the US EPA and Los Angeles Regional Water Quality Control Board.

Mixed-Use

Port of San Diego Rohr Facility, Chula Vista, California

Mr. Enerson assisted in a detailed subsurface assessment of the Rohr facility. The intent of the assessment was to evaluate the 40-acre former aircraft part manufacturing facility for acquisition by the Port of San Diego for redevelopment into a business park and entertainment complex. The assessment identified the presence of soil, soil vapor, and groundwater impacts by petroleum hydrocarbons, VOCs, heavy metals, PCBs, and semi-volatile organic compounds. He utilized many sampling techniques to assess the limits and concentrations of contaminants in the subsurface. Ultimately, the team was able to develop a cost estimate for potential remedial action cost associated to corrective action to allow redevelopment.

Master Planned Commercial/Residential Redevelopment Project, Whittier, California (Project Manager)

Kyle oversaw the assessment of 26 contiguous properties that are part of a 21-acre master planned commercial/residential redevelopment project. The properties included industrial facilities, platting lines, fuel USTs, and metal processing plants, among others. The estimated cleanup costs are approximately $2 million.

Multi-Unit / Family Residential

Residential Development Assessment, Ventura, California (Project Director)

Kyle directed an assessment of a 40-acre former agricultural property proposed for residential development. Pesticides were identified above hazardous waste levels and preliminary remediation goals established by the U.S. Environmental Protection Agency. Through corrective grading methods and onsite placement of the pesticide impacted soils, all material were re-used on site without offsite disposal. The over all cost savings for the client was more than $1 million. Total cost was less than $250,000 for all necessary activities.

Oil & Gas

Oil Field Site Assessments*

Kyle performed site assessments at oil field leases involving refineries, bulk storage areas, piping systems and wellhead, and drilling mud pit contamination.

** denotes projects completed with other firms*

Kyle D. Emerson PG, CEG

Managing Principal Geologist

Environmental Protection Agency Superfund Action, Culver City, California (Project Manager)
Kyle served as the project manager representing a major oil company in the assessment, remedial action, and litigation support in a multi-party contamination case affecting a City water supply. The assessment involved more than 250 continuous core borings up to 100 feet, as well as extensive remedial actions. The total cost for all related activities was $22 million. The case is settled and the closure of the site is pending.

Project Management
Liability and Property Management Consulting Services
Kyle is providing liability and property management consulting services to more than 10 medium to large property development firms in the US. His work involves property transaction assessments, contract review, acquisition guideline development, liability management evaluation, insurance acquisition, and strategic planning.

Residential Development
Environmental Development Management and Review (Project Manager)
Kyle manages and reviews environmental development issues for a large residential developer specializing in development of contaminated industrial properties by providing innovative solutions in developing contaminated properties for residential use through risk assessment, engineering, and administrative and property development controls.

Site Management and Remediation
Design and Implementation of Biodegradation Programs*, California
Kyle designed and implemented one of the first in-situ biodegradation programs in California; it involved 50,000 cubic yards of diesel-contaminated soils, and groundwater to depths of 70 feet below ground surface.

Soil and Groundwater Remediation Systems
Soil and Groundwater Contamination Assessments and Mitigation*, California (Project Manger)
Kyle managed numerous chlorinated solvent soil and groundwater contamination assessments and mitigation programs in southern California. The projects involved releases that impacted soil and groundwater to depth of groundwater more than 700 feet in multi-aquifer systems. One case involved with plume dimensions more than 1 mile from the source affecting residential properties.

Soil and Groundwater Assessment and Remediation Programs*
Implemented hundreds of soil and groundwater assessment and remediation programs at various service station facilities in Southern and Northern California, and Nevada. Work involved assessment, remedial design, installation, maintenance and monitoring. Closure has been received on a majority of these sites.

Assessment and Remediation Management*
Kyle managed the assessment and remediation of soil and groundwater manufacturing at dry cleaning facilities contaminated with chlorinated solvents.

Warehouse / Light Industrial
Glendale Redevelopment Project, Glendale, California (Project Manager)
Kyle managed the assessment and remedial actions during the redevelopment of and industrial property. The project involved the demolition of a historic manufacturing facility and a commercial dry cleaner. Each of these facilities were associated with releases of solvents and petroleum hydrocarbons. Remedial actions involved excavation by pattern drilling and off site disposal along with removal of former USTs. The total cost of remediation and assessment was $450,000.00.

** denotes projects completed with other firms*

Kyle D. Emerson PG, CEG

Managing Principal Geologist

Compton Redevelopment Project, Compton, California (Project Manager)

Kyle is serving as project manager for the assessment and remedial actions for a large redevelopment project. The project involves the redevelopment of a historic manufacturing facility and a former dry cleaner. Each of these facilities were associated with releases of solvents and petroleum hydrocarbons. The industrial facility was also associated with significant volumes of buried waste that required removal and disposal. These wastes also included the chemical referenced above, as well as PCBs and heavy metals. Remediation has included excavation, vapor extraction, and chemical fixation. The total cost of this project has been $2.8 million to date.

** denotes projects completed with other firms*

PHASE I ESA USER'S QUESTIONNAIRE

In order to qualify for protection from land owner liability under CERCLA as an *innocent landowner, bona fide prospective purchaser,* or *contiguous property owner,* ASTM standard practice E1527-13 and the federal AAI rule (40 CFR 312) require that the User of the Phase I ESA report provide certain information (if available) to the Environmental Professional completing the assessment. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete. Information that is not or cannot be provided to the Environmental Professional may be identified as a "data gap" in the Phase I ESA report.

Please answer the following questions as completely as possible. Attach additional pages as needed. Return the completed questionnaire to Stantec Consulting Services Inc.

1. Property Information

   Property Name: Compton 1

   Property Address: 930 W. Compton Blvd.

   City: Compton State CA Zip _____

   Property Owner Name: Community Redevelopment Agency of Compton

   Property Owner Phone #: (310) 605-5697

2. Contact For Site Access

   Name: Leslie Nacionales-Tafoya

   Company/Organization/Title: City of Compton

   Phone # 310-605-5697 E-Mail Address: lnacionales-tafoya@comptoncity.org

3. Environmental Cleanup Liens. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?

   _____ Yes _X_ No

   If yes, describe or attach details of the lien _____

4. Activity and Land Use Limitations. Are you aware of any activity and use limitations, such as engineering controls, land use restrictions, or institutional controls that are in place at the property and/or have been filed or recorded as applicable to the property as a result of environmental contamination, investigation, cleanup, or related matters?

_____ Yes _____X_____ No

If yes, describe or attach details of the limitations _____

_____

5. Specialized Knowledge or Experience. As the User of this ESA, do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property, such that you would have specialized knowledge about chemicals and processes used by this type of business?

_____ Yes _____X_____ No

If yes, describe or attach details of your specialized knowledge or experience _____

_____

6. Relationship of Purchase Price to Fair Market Value of Property. Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, do you have any reason to believe that the reduced purchase price may be related to contamination known or believed to be present at the property?

_____Yes, I have reason to believe that the purchase price for the property has been reduced in comparison with the fair market value due to contamination known or believed to be present at the property?

_____X_____No, I have no reason to believe that the purchase price for the property has been reduced in comparison with the fair market value due to contamination known or believed to be present at the property?

_____Not applicable. User is not involved in a purchase of the property.

7. Commonly Known or Reasonably Ascertainable Information. Are you aware of commonly known or reasonably ascertainable information about the property that would help the Environmental Professional to identify conditions indicative of releases or threatened releases of hazardous substances or petroleum products? For example:

Do you know the past uses of the property?

_____Yes (describe) _____

_____

__X__No

Do you know of chemicals, hazardous substances or petroleum products that are present or once were present at the property?

____Yes (describe) _____

_____

__X__No

Do you know of spills or other releases of chemicals, hazardous substances or petroleum products that have taken place at the property?

____Yes (describe) _____

_____

__X__No

Do you know of any environmental cleanups that have taken place at the property?

____Yes (describe) _____

_____

__X__No

8. The Degree of Obviousness of Contamination. E1527-13 and the federal AAI rule (40 CFR 312.31) require that the Phase I ESA consider the degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation. Based on your knowledge and experience related to the property, are there any *obvious* indictors that point to the presence or likely presence of contamination at the property?

____Yes (describe) _____

_____

__X__No

9. Availability of Previous Environmental Reports. Are you aware of previous environmental site assessment reports, other environmental reports, documents, correspondence, etc. concerning the property and its environmental condition?

____Yes (describe) _____

_____

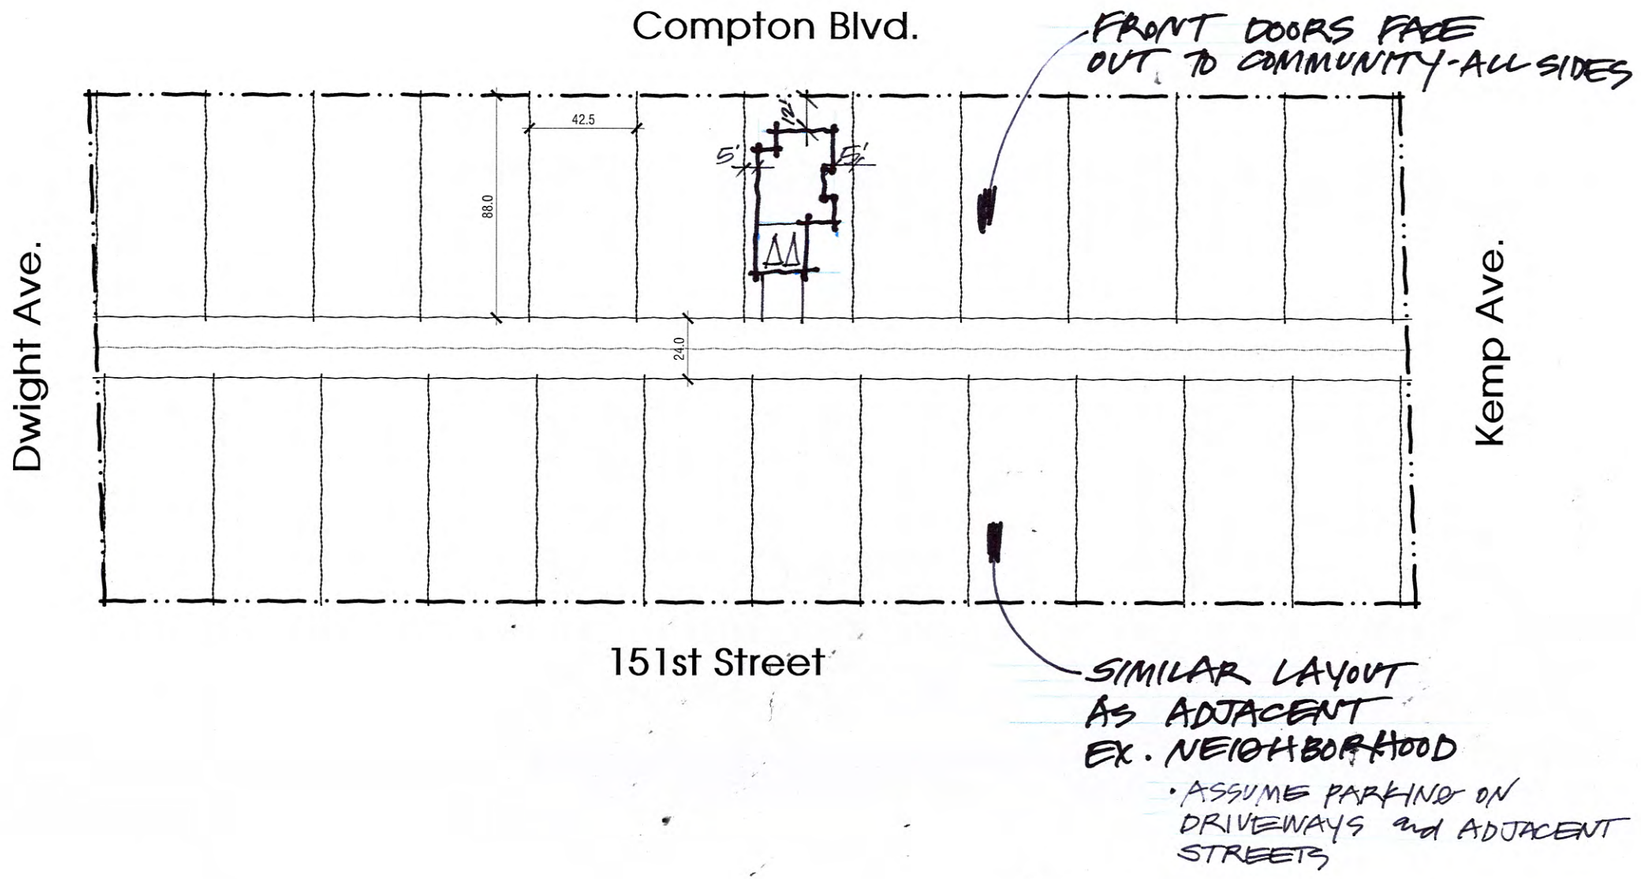
__X__No

Signature: _____

Name (printed): Kim Prijatel

Title: VP Development

Date: 4/10/18



Project Summary

Total Site Area:	2.45 Acres ±
Total Units:	24 Homes • Typical Alley Loaded Homes • 42.5' x 88' Lots
Net Density:	9.8 Homes per Acre
Parking:	48 Spaces Total (2 per home) • Potential for Driveways

Design Notes

- 24' Min. Alley Width

Notes:

1. Site plan is for conceptual purposes only.
2. Site plan must be reviewed by planning, building, and fire departments for code compliance.
3. Base information per civil engineer.
4. Civil engineer to verify all setbacks and grading information
5. Building Footprints might change due to the final design elevation style.
6. Open space area is subject to change due to the balcony design of the elevation.
7. Building setbacks are measured from property lines to building foundation lines.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/30/2018 has revealed that there are 4 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 6 LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there is 1 UST site within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 2 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Violation Status: No violations found

FINDS:

Registry ID: 110002751996

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Primary Waste Type: Hazardous/Influent or Solid Wastes that contain toxic, corrosive, ignitable or reactive substances and must be managed according to applicable DOHS standards.
Primary Waste: CNWTRS
Waste Type2: H
Waste2: Contaminated Ground Water
Primary Waste Type: Hazardous/Influent or Solid Wastes that contain toxic, corrosive, ignitable or reactive substances and must be managed according to applicable DOHS standards.

JOHNSON CONTROLS INC EPSD (Continued) **1000320800**

Secondary Waste: Contaminated Soil
Secondary Waste Type: Hazardous/Influent or Solid Wastes that contain toxic, corrosive, ignitable or reactive substances and must be managed according to applicable DOHS standards.
Design Flow: 0
Baseline Flow: 0
Reclamation: No reclamation requirements associated with this facility.
POTW: The facility is not a POTW.
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/11/2017

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/11/2017

Next Scheduled EDR Contact: 07/16/2018
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/11/2017
Date Data Arrived at EDR: 12/22/2017

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016
Date Data Arrived at EDR: 01/05/2017
Date Made Active in Reports: 04/07/2017

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 12/11/2017

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Northwest Map:	5640440 INGLEWOOD, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

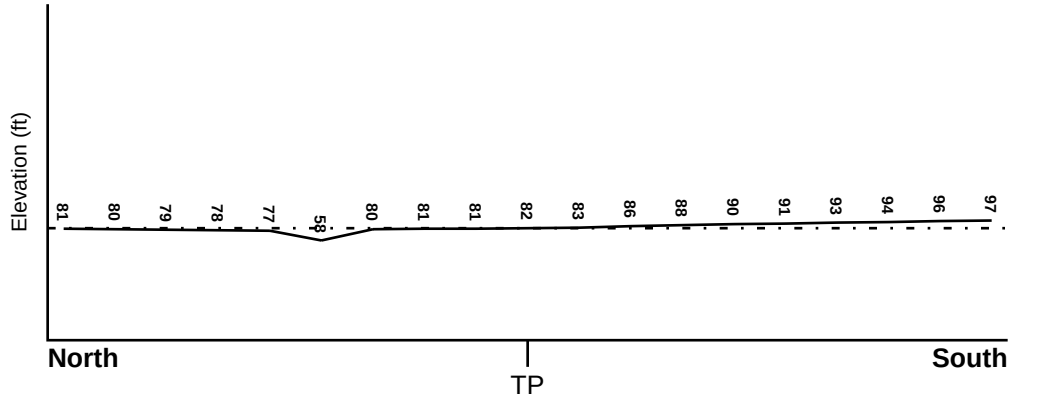
TOPOGRAPHIC INFORMATION

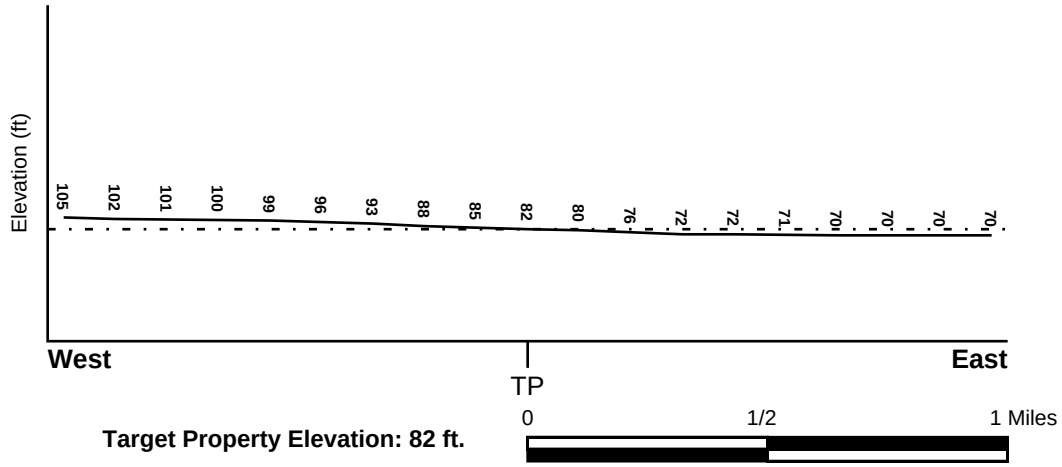
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES





Target Property Elevation: 82 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1815F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1795F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
SOUTH GATE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
25	1/2 - 1 Mile NE	Not Reported
1G	1/2 - 1 Mile NE	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types:
fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types:
stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish & Game
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Stantec were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Sanborn® Library search results

Certification #: 0230-4821-8DF0

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Stantec (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.
